Employment and Unemployment Situation in India 2004-05 (Part – I)

NSS 61st ROUND (July 2004 – June 2005)

National Sample Survey Organisation
Ministry of Statistics & Programme Implementation
Government of India

September 2006

HIGHLIGHTS

This report is based on the seventh quinquennial survey on employment and unemployment conducted in the 61st round of NSS during July, 2004 to June, 2005. The survey was spread over 7,999 villages and 4,602 urban blocks covering 1,24,680 households (79,306 in rural areas and 45,374 in urban areas) and enumerating 6,02,833 persons (3,98,025 in rural areas and 2,04,808 in urban areas). Employment and unemployment were measured with three different approaches, viz. *usual status* with a reference period of one year, *current weekly status* with one week reference period and *current daily status* based on the daily activity pursued during each day of the reference week. Unless otherwise stated, 'all' *usual status* workers will mean all workers taking into consideration the *usual principal* and *subsidiary status* taken together. Some of the key findings are stated below.

A Household and Population

- According to the survey estimates, a little over 73 per cent of the households belonged to rural India and accounted for nearly 75 per cent of total population.
- About 11 per cent of households in both the rural and urban areas were headed by females. Compared to all households, they had, on an average, a relatively smaller household size and a much higher sex-ratio.
- During 2004-05, in India, in as many as 26 per cent of the households in the rural areas and 8 per cent in the urban areas, there was no member in the agegroup 15 years and above who could read and write a simple message with understanding.
- Among those households having at least one member of age 15 years and above, about 4 per cent in the rural areas and 8 per cent in the urban areas had no usually employed member of age 15 years and above.
- About 57 per cent of the rural and 64 per cent of the urban population belonged to the age group (15-59 years).
- In the rural areas, during 2004-05, about 64 per cent of males and 45 per cent of the females were literate. The corresponding proportions, in the urban areas, were 81 per cent and 69 per cent.

B Labour Force

• According to the *usual status* (ps+ss), about 56 per cent of rural males and 33 per cent of rural females belonged to the labour force. The corresponding proportions in the urban areas were 57 per cent and 18 per cent, respectively.

• During the period 1999-2000 to 2004-05, the LFPRs according to *usual status* (ps+ss) increased by nearly 2 percentage points for males and about 3 percentage points for females, in the rural areas. In the urban areas, during that period, it increased by about 3 percentage points for both the males and females.

C Work Force

- About 42 per cent of the population in the country were usually employed. The proportion was 44 per cent in the rural and 37 per cent in the urban.
- The gender differential in the worker population ratio (WPR) was distinct: 55 per cent for males and 33 per cent for females in the rural areas, and 55 per cent for males and 17 per cent for females in the urban areas.
- The *daily status* rates were slightly lower than the *current weekly status* rates, which, in turn, were slightly lower than the *usual status* rates.
- Between 1999-2000 and 2004-05, in the rural areas, WPR in the *usual status* approach increased by about 2 percentage points for the males and by about 3 percentage points for the females. In the urban areas, the rates increased by about 3 percentage points for both the males and females.
- In rural India, the proportion of 'all' male workers engaged in the agricultural activities declined gradually from 81 per cent in 1977-78 to 67 per cent in 2004-05. For 'all' female workers, the decline was less from 88 per cent in 1977-78 to 83 per cent in 2004-05.
- In urban India, the 'trade, hotel and restaurant' sector engaged about 28 per cent of the male workers while 'manufacturing' and 'other services' sectors accounted for nearly 24 and 21 per cent, respectively, of the usually employed males. On the other hand, for urban females, 'services' sector accounted for the highest proportion (36 per cent) of the total usually employed, followed by 'manufacturing' (28 per cent) and 'agriculture' (18 per cent).
- The proportion of urban females employed in 'manufacturing' sector increased from 24 per cent in 1999-2000 to 28 percent in 2004-05. The 'trade, hotel and restaurant' sector revealed a fall in its share by about 5 percentage points between 1999-2000 and 2004-05. During this period, no such distinct changes are observed in the case of urban males.

D Unemployment Rate

- The unemployment rate (number of person unemployed per 1000 persons in the labour force), according to *usual status* (ps+ss), was 17 in the rural areas and 45 in the urban areas. The unemployment rates for females are found to be higher than that for males, and highest among urban females.
- The unemployment rates according to the *current daily status* (cds) approach are higher than the rates obtained according to *usual status* approach and *weekly status* approach, thereby indicating a high degree of intermittent unemployment.
- During the period 1999-2000 to 2004-05, the *unemployment rate* in terms of the *usual status* (ps+ss), remained almost the same for rural males and decreased by 1 percentage point for urban males, but the increased by about 1 percentage point for females in both the rural and urban areas.
- In both the rural and urban areas, unemployment rate among the *educated* (secondary and above) was higher than that among those whose education level was lower than *secondary*.
- The unemployment rate was much higher among the youth (15-29) as compared to that in the overall population.
- Among the educated youth, the *unemployment rate* was predominantly high in both the rural and urban areas: 267 and 208, respectively for females, and 133 and 91, respectively for males.

E Underemployment

- During 2004-05, the proportion of usually employed females who were found not to be employed during the week preceding the date of survey was 17 per cent in rural India and nearly 9 per cent in urban India. The corresponding percentages for usually employed males were 4 and 2 only.
- The proportion of person-days of the usually employed utilised for work, in the rural and urban areas, was estimated at about 66 per cent and 80 per cent, respectively for females, and 89 and 95 per cent, respectively for males.
- During 2004-05, in the age group 15 years and above, about 11 per cent of usually employed rural males and 6 per cent of usually employed urban males sought or were available for additional work. The corresponding percentages for females were around 7 in both the rural and urban areas.
- During 2004-05, about 5 to 9 per cent of the usually employed persons of different categories had reported availability for alternative work.

F Labour Mobility

- During the two years preceding the date of survey, about 1 per cent of the usually (ps) employed had changed their work status while about 7 (urban males) to 9 (rural females) per cent had changed their establishment.
- The proportion of persons who changed their establishment is much less among those with education level *higher secondary and above* as compared to those with lower levels of education be it rural or urban area.
- About 1 per cent of *usual status* (ps) workers reported change in their industry of work during the two years preceding the date of survey.
- About 1 per cent of male workers and less than 1 per cent of female workers reported change in their occupation during the two years preceding the date of survey.

Chapter One

Introduction

1.0 The Report in Perspective

1.0.1 An all-India survey on the situation of employment and unemployment in India was carried out as a part of the 61st round of the National Sample Survey Organisation (NSSO) during the period July 2004 - June 2005. In this survey, a nation-wide enquiry was conducted to provide estimates on various characteristics pertaining to employment and unemployment in India and some characteristics associated with them at the national and state levels. Information on various facets of employment and unemployment in India was collected through a schedule of enquiry (Schedule 10). Based on the data collected during the entire period of survey, estimates pertaining to employment-unemployment in India along with various characteristics associated with them have been presented in this report.

1.2 Background

- 1.2.1 One of the important surveys conducted regularly by the NSSO is the quinquennial survey on employment-unemployment. The first such survey was done during September 1972 October 1973 corresponding to the 27th round of NSSO. The present survey is the seventh in the series.
- 1.2.2 Past Quinquennial Surveys: To assess the volume and structure of employment and unemployment, starting with the 9th round (May - September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting such surveys, the Planning Commission, in the year 1970, set up an "Expert Committee on Unemployment Estimates", (popularly known as the Dantwala Committee), which reviewed these surveys and the indicators generated from such surveys. Based on concepts and definitions recommended by this committee, the first quinquennial survey on employment and unemployment was conducted in the 27th round of NSS (September 1972 – October 1973). After the 27th round, five comprehensive quinquennial surveys on employment and unemployment situation in India have been carried out by the NSSO prior to the present quinquennial survey. These were carried out during the 32nd round (July 1977 – June 1978), 38th round (January 1983 – December 1983), 43rd round (July 1987 – June 1988), 50th round (July 1993 – June 1994), and 55th round (July 1999 – June 2000), in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee. The results of these surveys have been brought out in the form of NSS reports.
- 1.2.3 Other surveys on employment-unemployment: Apart from the quinquennial surveys on employment and unemployment, NSSO has been regularly collecting information on certain key items on employment and unemployment from a limited set of households in each round since its 45th round (July 1989 June 1990), known as annual series, through the schedule on Household Consumer Expenditure (Schedule 1.0). In the annual series, only some key particulars on the usual and current weekly status of the individuals were collected, and the current weekly status of a person was determined through a direct query. In the 60th round (January June 2004), there was a change in the procedure of collecting

information on employment and unemployment. During the formulation of NSS 60th round survey, the Planning Commission pressed their need for collection of data on the current daily status of employment and unemployment annually as well. The collection of data in the current daily status necessitated the separation of two enquiries on Household Consumer Expenditure and Employment-Unemployment, and as a result, a separate schedule on employment and unemployment (Schedule 10) was canvassed in the 60th round, in which concepts, definitions and procedures were similar to the quinquennial rounds. The results of such surveys have been published in the form of NSS reports.

- 1.2.4 *The present survey*: The seventh quinquennial survey on employment and unemployment was conducted by NSSO in its 61st round (July 2004 June 2005). In this survey, apart from the information usually collected in the quinquennial rounds, information on some new items has been collected. This has been done following the suggestions made by the Working Group set up to finalise the survey methodology and schedules of enquiry of the 61st round. Some of the more important among them, which have enlarged the scope of the survey are stated below:
- a) Certain information on informal employment ¹ has been collected from all usual status workers with respect to their principal work activity and/or their subsidiary activity, engaged in non-agricultural sector as well as in the agricultural sector excluding only growing of crops, market gardening, horticulture and growing of crops combined with farming of animals. Indeed, according to NIC-98, information on informal employment has been collected from usual status workers engaged in industry groups 012, 014, 015 and divisions 10 to 99.
- b) In the employment and unemployment surveys, data on wages have so far been collected for the employees according to the current daily status. In the 61st round survey, attempt has been made to assess the quality of self-employment in terms of the earnings through certain probing questions. From the self-employed persons according to the usual status, information on two items viz. 'whether earning from self-employment was remunerative' and 'what amount per month was considered remunerative' was collected in terms of codes.
- c) Information on vocational training receiving/received by the persons of age 15 to 29 years has been collected. Further, among those who have received or are receiving 'formal vocational training', information on the 'source from where degree/diploma/certificate received/ to be received', 'duration of training' and 'field of training' has been collected.
- d) Information on 'voluntary participation without remuneration in production of goods and services' has been collected for those members of the household who were not workers, considering both principal and subsidiary status, as per existing production boundary followed by NSSO.
- e) Instead of collecting information on skill, information on 'seeking or available or suitable for the type of occupation' has been collected for the persons of age below 75 years who are not employed in the usual principal status.

_

¹ Since the 55th round, data on type of enterprise, number of workers in enterprise, etc. are being collected for measuring employment in the informal sector. These are worker-reported or self-reported details collected from households that may differ from the employer-reported details of the same variables that are mandatory under several acts governing the enterprises especially in the formal sectors

f) Information on 'period of seeking/availability for work during the last 365 days' has been collected for all the persons of age 5 years and above. In the earlier quinquennial rounds, this information was collected only for those who were unemployed in the usual principal status.

It may be noted that in case more than one subsidiary economic activity was pursued during the reference period, the details of maximum two usual subsidiary economic activities were recorded in the 55th round survey depending upon the relatively longer time criteria. In this round, only one usual subsidiary economic activity pursued for relatively more time was recorded and a person was considered to have performed subsidiary economic activity if the activity was performed at least for 30 days in the reference year.

1.3 Scope

- 1.3.1 As in the past, in the present survey too, NSSO collected data on some characteristics, based on which, estimates of employment and unemployment, measured in terms of 3 basic approaches viz. usual status, current weekly status and current daily status can be obtained. The reference period for these approaches differs it being 365 days preceding the date of survey for 'usual status', 7 days preceding the date of survey for 'current weekly status' and each day of the 7 days preceding the date of survey for 'current daily status'.
- 1.3.2 Data were collected on the activity status of all persons, i.e. for workers, for those seeking or available for work and also for those remaining out of labour force. A worker could be self-employed or enjoy regular salary/wages or be employed on casual wage basis. Data on this aspect, along with the industry of work of the worker and his/her occupation, were collected during this survey. In order to reveal the multi-dimensional features of the employment-unemployment situation in India, information on several correlates pertaining to it were also gathered. In addition, probing questions were put to the workers in order to understand the extent of underutilization of the their labour time and to acquire more specific information in this regard. An effort was also made to collect information on the qualitative aspects of employment like changes in activity status, occupation /industry, availability of trade unions/associations, nature of employment (permanent/temporary), etc. Data were also collected from the usual status workers, engaged in industry groups 012, 014, 015 and divisions 10 to 99 of NIC-98 (see Annexure-I given after Chapter Eight but before Appendix A for brief description of industry groups and divisions), with respect to some particulars of the enterprise in which they were engaged viz. location of work place, type of enterprises, number of workers in the enterprise etc. and some particulars on the condition of employment like type of job contract, eligibility for paid leave, availability of social security benefits etc.. Data were also collected to get some idea about earning from self-employment. Information on vocational training receiving/received by the persons of age 15 to 29 years was also collected in the 61st round survey.

1.4 The survey outline

1.4.1 *Geographical coverage*: The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland

situated beyond 5 kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remained inaccessible throughout the year.

1.4.2 *Sub-round*: The fieldwork of the 61st round of NSSO started from 1st July, 2004 and continued till 30th June, 2005. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1st sub-round period ranging from July to September 2004, the 2nd sub-round period from October to December 2004 and so on. An equal number of sample villages/blocks (FSUs) were allotted for survey in each of these four sub-rounds. The survey used the interview method of data collection from a sample of randomly selected households.

1.5 Sample design

- 1.5.1 In the 61st round survey, a stratified multi-stage sampling design was adopted for selection of the sample units for rural as well as urban areas. The first stage units (FSUs) were the census villages (panchayat wards for Kerala) for rural areas and the NSSO Urban Frame Survey (UFS) blocks for urban areas. The ultimate stage units (USUs) were the households for both rural and urban areas. Hamlet-groups/sub-blocks constituted the intermediate stage whenever these were formed in the sample FSUs. For rural areas, the list of 2001 census villages constituted the sampling frame for selection of sample FSUs for most of the states. For the rural areas of Kerala, however, the list of panchayat wards was used as the sampling frame for selection of panchayat wards. For the urban areas, the latest lists of UFS blocks constituted the sampling frame for selection of sample FSUs. Within each district of a State/UT, two separate basic strata were formed for rural areas and urban areas. All rural areas of the district comprised rural stratum and all the urban areas of the district comprised urban stratum.
- 1.5.2 At the all-India level, a total number of 12788 FSU's (8128 villages and 4660 urban blocks) was allocated for the survey and this was allocated to the different States and UTs in proportion to population as per census 2001 which was then allocated between rural and urban sectors in proportion to population as per *population census 2001* with 1.5 weightage to urban sector. Within each of the rural and urban sectors of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per census 2001.
- 1.5.3 Within a district, if 'r' number of FSUs were allocated for a rural stratum, a total number of 'r/2' sub-strata were formed within that rural stratum. From each sub-stratum of the rural stratum of a district, two FSUs were selected with probability proportional to size with replacement (PPSWR), size being the population as per Population Census 2001. Within a district, if 'u' number of FSUs were allocated for a urban stratum, a total number of 'u/2' sub-strata were formed within that urban stratum. From each sub-stratum of the urban stratum of a district, two FSUs were selected with simple random sampling without replacement (SRSWOR). Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors. All households listed in the selected village/block/ hamlet-groups/sub-blocks were stratified into three second stage strata (SSS). A total of 10 households were selected from each sample village/block for canvassing the employment and un-employment schedule. The sample households from each of the second stage strata were selected by SRSWOR.

1.5.4 Out of the total number of 12788 FSU's (8128 villages and 4660 urban blocks) selected for survey for the central sample, 12601 FSU's (7999 villages and 4602 urban blocks) could be surveyed at the all-India level for canvassing Schedule 10. The number of households surveyed was 1,24,680 (79,306 in rural areas and 45,374 in urban areas) and number of persons surveyed was 6,02,833 (3,98,025 in rural areas and 2,04,808 in urban areas). The sample design and estimation procedure used for the survey is given in Appendix B of the report.

1.6 Contents of the Report

- 1.6.1 This report contains eight chapters, including the present introductory chapter, and three appendices. Chapter Two describes the concepts and definitions of those terms used in the survey in connection with the various items covered in this report. The main findings relating to the estimates given in this report are presented and discussed in Chapters Three to Eight. To start with, Chapter Three is on household and population characteristics. Discussions on the labour force, the work force and the unemployed are presented in Chapters Four, Five and Six, respectively. The next chapter, viz. Chapter Seven, deals with underemployment while the last chapter discusses the feature of labour mobility. In Chapters Three to Eight, wherever state level tables have been presented, those have been placed at the end of the respective chapters. The detailed tables forming the basis of this report are presented in Appendix A. Appendix B gives a fairly detailed description of the sample design and estimation procedure used for the survey and Appendix C gives a facsimile of the schedule canvassed in the survey.
- 1.6.2 The detailed tables turned out to be very voluminous. Hence, this report is being brought out in two parts.
- 1.6.3 All the estimates presented in this report are based on Central sample data only. The cell-level figures in any of the detailed tables, when added up, may not exactly equal the figure shown against the 'total' column (or line) due to (i) rounding off and/or (ii) presence of non-response cases.

1.7 Plan for release of results

1.7.1 It has been planned to bring out a series of seven reports on the basis of the employment and unemployment survey results of NSS 61st round. The present report - first in the series - deals in some detail, with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covers some aspects of underemployment. The report gives the results generated at all-India level and some important results for different states/union territories. The other six reports to be released are: (i) Informal Employment in India: 2004 - 05, (ii) Employment and Unemployment situation in cities and towns in India: 2004 - 05, (iii) Participation of Women in the Specified Activities: 2004 - 05, (iv) Status of Education and Vocational Training in India: 2004 - 05, (v) Employment and Unemployment situation among Social Groups in India: 2004 - 05, and (vi) Employment and Unemployment situation among Major Religious groups in India: 2004 - 05.

Chapter Two

Concepts and Definitions

- 2.0 The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.
- 2.1 Household: A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb "normally" means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer's/host's household. "Living together" was given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person's family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.
- 2.2 Land owned by the household as on date of survey: A piece of land was considered as 'owned by the household' if perma nent heritable possession with or without the right to transfer the title was vested in a member or members of the household. Land held in owner-like possession say, under perpetual lease, hereditary tenure, long-term lease for 30 years or more, etc., was also considered as land owned.
- 2.3 Land possessed by the household as on date of survey: The area of land possessed included land 'owned', 'leased in' and 'land neither owned nor leased in' (i.e. encroached) by the household but excluded land 'leased out'. For a piece of land under the possession of the household, if the household did not have the title of ownership and also did not have lease agreement for the use of land transacted, either verbally or in writing, such land was considered as 'neither owned nor leased in'. In collecting information regarding land possessed, the actual position as obtained on the date of survey was considered. The 'area of land possessed' did not include the area of land owned, leased-in, etc. by the servants/paying guests who were considered as normal members of the household.
- 2.4 Land cultivated (including orchard and plantation) during July 2003-June 2004: Land cultivated (including orchard and plantation) during the agricultural year 2003-2004, i.e., July 2003 to June 2004 was recorded considering cultivation of land from the land 'owned', 'land leased-in' or from 'land neither owned nor leased-in'. Area with field crops and area under orchards and plantations was counted only once in the same year/ season. It may be noted that

information on land owned, possessed or cultivated as described above was collected in hectares upto 3 places of decimals.

- 2.5 General educational level: A person was considered as literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the general level of education was collected in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/ her all general/technical/vocational educational level and was recorded in terms of 12 categories viz. (i) not literate, (ii) literate without formal schooling: (a) Education Guarantee Scheme (EGS)/Non-formal Education Courses (NFEC)/ Adult Literacy Centres (AEC), (b) Total Literacy Campaign (TLC), (c) others; (iii) literate but below primary, (iv) middle, (v) secondary, (vi) higher secondary, (vii) diploma/certificate course, (viii) graduate, and (ix) postgraduate and above. The criterion for deciding primary, middle, secondary, etc. levels were the same that has been followed in the concerned states/union territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which is equivalent to graduation level, was considered under the category 'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which is equivalent to post-graduation level and above were considered under the category 'post-graduate and above'.
- 2.6 **Technical educational level:** The highest level of technical education successfully completed by each member of the household was recorded in terms of 12 categories viz. (i) no technical education, (ii) technical degree in agriculture / engineering / technology / medicine etc. (iii) diploma or certificate below graduate level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects, and (iv) diploma or certificate equivalent to graduate and above level in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects. Technical diploma or certificate in 'other subjects' included diploma or certificate in management, applied arts, etc.
- 2.7 Status of current attendance in educational institution: Particulars of current attendance in educational institution were recoded for persons of age below 30 years. It was first ascertained whether the person was currently attending any educational institutions (government or private) or not. For persons who were not currently attending any educational institutions, reason for not attending viz. (i) school too far, (ii) to supplement household income, (iii) education not considered necessary, (iv) to attend domestic chores, and (v) others, was recorded. For those who were currently attending any educational institution, the course of study pursued by them was recorded in terms of 20 categories viz. (i) EGS/NFEC/AEC, (ii) TLC, (iii) pre-primary (nursery/Kinder garten, etc.), (iv) primary (class I to IV/V), (v) middle, (vi) secondary and higher secondary, (vii) graduate and above in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) other subjects, (viii) diploma or certificate (below graduate level) in: (a) agriculture, (b) engineering/technology, (c) medicine, (d) crafts, (e) other subjects.

Persons who were registered for any regular correspondence courses or distance education courses for a stipulated period at the end of which, were allowed to appear in the examination for the course, was also considered as 'currently attending'. Persons who were awaiting results were also considered as 'currently attending'.

- 2.8 *Type of institution*: The type of institution referred to the type of management by which the institution was run. For those who were currently attending any educational institution, the type of institution was recorded in terms of 5 categories viz. (i) *Government*, (ii) *Local body*, (iii) *Private aided*, (iv) *Private unaided*, and (v) not known. All schools/ institutions run by the State, Central Government, Public Sector Undertakings or Autonomous Organisations, which are completely financed by the Government were treated as government institutions. Schools/ institutions where there was some intervention of government in the management and were mainly financed by the government, were also treated as government institutions. All institutions run by municipal corporations, municipal committees, notified area committees, zilla parishads, panchayat samitis, cantonment boards, etc. were treated as local body institutions. Institutions that were run by an individual or a private organisation and receive maintenance grant partly or fully from the Government or local body were considered as private aided institution. Institutions that were managed by an individual or a private organisation and not receiving maintenance grant either from a Government or a local body were considered as private unaided institution.
- 2.9 **Vocational training**: The main objective of vocational education and training is to prepare persons, especially the youth, for the world of work and make them employable for a broad range of occupations in various industries and other economic sectors. A vocational training was broadly defined as a training, which prepared an individual for a specific vocation or occupation. It aims at imparting training to persons in very specific fields through providing significant 'hands on' experience in acquiring necessary skill in the specific vocation or trade, which make them employable or create for them opportunities of self-employment.
- 2.9.1 *Formal vocational training*: The vocational training that took place in education and training institutions which followed a structured training programme and led to certificates, diplomas or degrees, recognised by State/Central Government, Public Sector and other reputed concerns was considered as formal vocational training. By structured training programme, it was meant that (i) the training programme had a definite title with prescribed syllabus and curriculum and a specified duration of the training, and (ii) the training had some entry level eligibility in terms of education and age.
- 2.9.2 *Non-formal vocational training*: The expertise in a vocation or trade is sometimes acquired by the succeeding generations from the other members of the households, generally the ancestors, through gradual exposures to such works. The expertise gained through significant 'hands-on' experience enables the individual to take up activities in self-employment capacity or makes him employable. Acquiring such marketable expertise by one, which enabled him/her to carry out the trade or occupation of their ancestors over generations, was considered as receiving 'non-formal' vocational training through 'hereditary' sources. 'Non-formal' vocational training received by a person to pursue a vocation different from the trade or occupation of their ancestors, was considered as 'non-formal' vocational training

through 'other' sources. The 'other' sources also included the cases where the expertise to carry out the trade or occupation of their ancestors was acquired from sources other than the household members.

- 2.10 **Non-Profit institutions** (**NPI**): NPIs are legal or social entities which are created for the purpose of producing goods and services that are usually distributed through non-market channels and the legal status of such entities did not permit them to be a source of income, profit or other financial gain for the units that established, controlled or financed them. In practice, their productive activities are bound to generate either surpluses or deficits but the institutional units which control or manage them are not entitled to a share in any profit/income.
- 2.11 **Philanthropic institution:** These are the non-profit institutions consisting of charities, relief or aid agencies that are created for philanthropic purposes. Such institutions generally provide goods or services to households/institutions in need, including households affected by natural disasters or war. The resources of such institutions are provided mainly by donations in cash or in kind from the general public, corporations or governments.
- 2.12 **Public works:** Public works was defined as those activities which were sponsored by Government or Local bodies and which covered local area development works like construction of roads, dams, bunds, digging of ponds etc. as relief measures, or as an outcome of the employment generation schemes under the poverty alleviation programmes.
- 2.13 *Economic activity*: The entire spectrum of human activity falls into two categories economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered as an economic activity for the employment and unemployment survey of NSS 61st round. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.
- 2.13.1 The full spectrum of economic activities as defined in the UN system of National Accounts (1993) was not covered in the definition adopted for the NSS 61st round survey of Employment and Unemployment. Production of any good for own consumption is considered as economic activity by UN System of National Accounts but production of only primary goods for own consumption was considered as economic activity by NSSO. While the former considers activities like own account processing of primary products as economic activities, in the NSS surveys, processing of primary products for own consumption was not considered as economic activity.
- 2.13.2 The term 'economic activity' as defined in the employment and unemployment survey of NSS 61st round, therefore, included:
 - (i) all the market activities performed for pay or profit which result in production of goods and services for exchange.
 - (ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-98) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities. Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not.

- 2.14 *Activity status*: It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and no n-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:
 - (i) working or being engaged in economic activity (work) as defined above,
 - (ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if the 'work' is available and
 - (iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and 'unemployment', respectively.

2.14.1 Identification of each individual into a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person. In such an eventuality, the identification unique ly under any one of the three broad activity statuses was done by adopting *either the major time* or *priority criterion* (see para 2.22.3 below). The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the 'current activity status' approach. Each of the three broad activity statuses was further subdivided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code related to that activity in which relatively more time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activity.

2.14.2 The detailed activity statuses under each of the three broad activity statuses (viz. employed, unemployed and not in labour force) and the corresponding codes used in the survey are given below:

<u>code</u> <u>description</u>

working (or employed)

self-employed

- worked (self-employed) in household enterprises as own-account worker
- worked (self-employed) in household enterprises as an employer
- worked (self-employed) in household enterprises as helper

regular salaried/ wag employee

31 worked as regular salaried/wage employee

casual labour

- 41 worked as casual wage labour in public works
- worked as casual wage labour in other types of works
- did not work owing to sickness though there was work in household enterprise
- did not work owing to other reasons though there was work in household enterprise
- did not work owing to sickness but had regular salaried/wage employment
- did not work owing to other reasons but had regular salaried/wage employment

not working but seeking/available for work (or unemployed)

- sought work or did not seek but was available for work (for usual status approach)
- sought work (for current weekly status approach)
- did not seek but was available for work (for current weekly status approach)

neither working nor available for work (or not in labour force)

- 91 attended educational institutions
- 92 attended to domestic duties only
- attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
- 94 rentiers, pensioners, remittance recipients, etc.
- 95 not able to work owing to disability
- others (including beggars, prostitutes, etc.)
- 98 did not work owing to sickness (for casual workers only)
- 99 children of age 0-4 years

It may be noted that codes 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only.

- 2.15 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or nonfarm activities were also considered as workers. Relevant activity status codes within 11 to 72 were assigned for workers. Workers were further categorized as self-employed (relevant activity status codes: 11, 12, 21, 61, 62), regular salaried/wage employee (relevant activity status codes: 31, 71, 72), and casual wage labour (relevant activity status codes: 41 and 51).
- 2.16 Seeking or available for work (or unemployed): Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.
- 2.17 *Labour force*: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 82 constituted the labour force.
- 2.18 *Not in labour force*: Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity status codes 91-95, 97 and 98 were assigned for persons belonging to category 'not in labour force'.
- 2.19 *Self-employed*: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., how, where and when to produce) and *economic independence* (i.e., market, scale of operation and money) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the sales of output produced by self-employed persons.
- 2.19.1 Categories of self-employed persons: Self-employed persons were categorised as follows:
 - (i) *own-account workers*: those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;
 - (ii) *employers*: those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and

- (iii) *helpers in household enterprise*: those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.
- 2.20 **Regular salaried/wage employee**: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.
- 2.21 *Casual wage labour*: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.
- 2.22 Different approaches followed to determine activity status: The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These are: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. These are termed respectively as usual status, current weekly status and current daily status. The procedure adopted to arrive at these three measures is given below.
- 2.22.1 *Usual principal activity status:* The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the usual principal activity status of the person. To decide the usual principal activity of a person, first a two stage dichotomous classification was followed for determining the broad usual principal activity status of the person viz. (i) employed, (ii) unemployed, and (iii) not in labour force. Persons were first categorised as those in the labour force and those not in the labour force depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (not in the labour force). For persons belonging to the labour force, the broad activity status of either 'working' (employed) or 'not working but seeking and/or available for work' (unemployed) was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. In terms of activity status codes (stated earlier in para 2.14.2), codes 11-51 were applicable for persons classified as workers and codes 91-97 for those who were not in the labour force. In the usual status approach, a single code 81 was assigned for persons seeking or available for work (unemployed persons) while two separate codes 81(sought work) and 82 (did not seek

but was available for work) were assigned for unemployed persons according to current weekly status and current daily status approach.

- 2.22.2 *Usual subsidiary economic activity status*: A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11-51 only were applicable for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:
 - (i) a person may be engaged in a relatively longer period during the 365 days in economic (non-economic activity) and for a relatively minor period, which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period, was considered as his/her subsidiary economic activity.
 - (ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively shorter time in a subsidiary capacity. The economic activity, which was pursued for a relatively shorter time, was considered as his/her subsidiary economic activity.
- 2.22.3 Usual activity status considering principal and subsidiary status taken together: The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.
- 2.22.4 *Current weekly activity status*: The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided *on the basis of a certain priority cum major time criterion*.
- 2.22.4.1 According to the *priority criterion*, the status of 'working' gets priority over the status of 'not working but seeking or available for work' that, in turn, gets priority over the status of 'neither working nor available for work'. A person was considered working (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work (or unemployed)' if, during the reference week, no economic activity was pursued by the person but he/she made efforts to get work or had been available for work any time during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any

time during the reference week was considered as engaged in non-economic activities (or not in labour force).

- 2.22.4.2 After deciding the *broad current weekly activity status* of a person on the *basis of 'priority' criterion*, the *detailed current activity status* was then decided *on the basis of 'major time' criterion if that person pursued multiple economic activities.* The current weekly activity status of a person could be any one of the detailed activity status (ref. para 2.14.2) and could have any of the valid codes within 11 to 98. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 98 for persons not in the labour force.
- 2.22.5 Current daily activity status The activity pattern of the population, particularly in the informal sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status for a person was determined on the basis of his/her activity status on each day of the reference week using a priority-cum-major time criterion (day to day labour time disposition). Time disposition was recorded for every member of the sample households. This involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The different activities were identified and recorded in terms of 'activity status' and 'industry' codes for persons in urban areas and 'activity status', 'industry' and 'operation' codes for persons in rural areas. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The terms 'industry' and 'operation' are explained later. The following points were considered for assigning the time intensity and determining the current daily status of a person:
 - i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.
 - ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.
 - iii) If a person was engaged in more than one of the economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities on which he/she devoted relatively longer time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.
 - iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not.

- v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.
- vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.
- 2.22.6 In the quinquennial surveys, the current weekly status of a person is derived from the intensities assigned for the daily activities performed by a person during the 7 days of the reference week.
- 2.23 *Industry and occupation of the work activity*: For the employed persons, to record the industry of work, 5-digit classification of NIC-1998 was used and to record the type of occupation, 3-digit classification of NCO-1968 was used. In case two or more industry-occupation combinations corresponding to the status code were reported by a person, the industry-occupation was taken as the one in which *relatively more time* was spent during the reference period by the person. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC 1998, six additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005) and 'others' (95009). This apart, separate industry codes were used for recording the activities of letting of building for residential purposes (70104) and letting of building for non-residential purposes (70105).
- 2.24 *Operation*: This was the type of work performed by a person during a reference period. It could be manual or non-manual and could pertain to activities in agricultural or nonagricultural sector. Operation was combined with activity status and industry corresponding to the work performed. Information regarding the type of operation was collected only for rural areas and related to current status only. The different types of operations came under four categories. Ploughing, sowing, transplanting, weeding, harvesting and other cultivation activities fell under the category manual work in cultivation. Against the category manual work in other agricultural activities were the following types: forestry, plantation, animal husbandry, fisheries and other agricultural activities. Manual work in non-agricultural activities constituted the third category. The last category viz. non-manual work comprised two broad types – (i) in 'cultivation' and (ii) in 'other than cultivation'. It may be noted that for 'regular salaried/wage employees' on leave or on holiday, the 'operation' related to their respective function in the work or job from which he/she was temporarily off. Similarly, for persons categorised as 'self-employed' but not working on a particular day in spite of having work on that day, the operation related to the work that he/she would have done if he/she had not enjoyed leisure on that day.

- 2.25 *Cultivation*: All activities relating to production of crops and related ancillary activities were considered as cultivation. Growing of trees, plants or crops as plantation or orchards (such as rubber, cashew, coconut, pepper, coffee, tea etc.) were not considered as cultivation activities for the purpose of this survey. In general, the activities covered under NIC 1998 sub-classes 01111, 01112, 01113, 01115, 01119, 01121, 01122 and 01135 (excepting plantation of pepper and cardamom) were considered as cultivation.
- 2.26 *Manual work*: A job essentially involving physical labour was considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involved some amount of physical labour. But, peons, chowkidars, watchman, etc. were considered manual workers even though their work might not involve much physical labour. Manual work was defined as work pursued in one or more of the following occupational groups of the National Classification of Occupations (NCO 1968):

Division 5 (Service workers):

Group 52: cooks, waiters, bartenders and related workers (domestic and institutional).

Group 53: maid and other housekeeping service workers (not elsewhere classified).

Group 54: building caretakers, sweepers, cleaners and related workers.

Group 55: Launders, dry cleaners and pressers.

Group 56: hair dressers, barbers, beauticians and related workers.

Family 570: fire fighters

Family 574: watchmen, gate-keepers

Family 579: protective service workers not elsewhere classified.

Division 6 (Farmers, Fishermen, Hunters, Loggers and related workers):

Group 63: agricultural labourers

Group 64: plantation labourers and related workers

Group 65: other farm workers

Group 66: forestry workers

Group 67: hunters and related workers

Group 68: fishermen and related workers.

Division 7-8-9 (Production and related workers, transport equipment operators and labourers):

All groups excluding group 85 (electrical fitters and related workers) and group 86 (broadcasting station and sound equipment operators and cinema projectionists).

- 2.27 **Rural labour**: Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour) and *living in rural areas*, was taken as rural labour.
- 2.28 *Agricultural labour*: A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:
 - (i) farming,
 - (ii) dairy farming,
 - (iii) production of any horticultural commodity,
 - (iv) raising of livestock, bees or poultry,
 - (v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce.

Working in fisheries was *excluded* from agricultural labour. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

- 2.29 **Wage paid-manual labour**: A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage paid manual labour.
- 2.30 *Nominal work:* When a person worked for a total duration of 1 to 2 hours in a day, it was considered as a day with nominal work for the person. In the day-to-day labour time disposition of the reference week, such a day's work was considered as 'half-days' work. Therefore, for a person, number of days with nominal work is a sub-set of the number of days worked with 0.5 intensity.
- 2.31 Wage and salary earnings: Information on wage and salary earnings was collected separately for each of the wage/salaried work recorded for a person in a day. Here, earnings refer to the wage/salary income (and not total earnings taking into consideration of all other activities done) received/receivable for the wage/salaried work done during the reference

week by a wage/salaried employee and casual labourer. The wage/ salary received or receivable may be in cash or kind or partly in cash and partly in kind. While recording the earnings following conventions were followed.

- i) The wages in kind were evaluated at the current retail price.
- ii) Bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. evaluated at the cost of the employer or at retail prices and duly apportioned for the reference week were also included in earnings.
- iii) Amount receivable as 'over-time' for the additional work done beyond normal working time was excluded.

It may be noted that in the survey, at most two activities could be recorded for a person in a day. Therefore, it is possible that a person might have carried out two or more wage/salaried activities in a day, but only one activity or two activities at the most, depending upon the time spent on those activities, was recorded. In that case, the wage/salary income only from that activity(s) was collected and recorded separately, and not the total income of the person from all the activities done for the entire day.

- 2.32 Earning from self-employment: To have some idea about earnings from self-employment, perception of the self-employed persons (self-employed either in the usual principal status or usual subsidiary status) regarding their current earnings from self-employment was recorded. Earning of the self-employed person was judged considering all his/ her farm and non-farm businesses together in which he/ she was engaged in self-employment capacity during the last 365 days either in principal status or subsidiary status or in both the statuses. Information was collected on whether their current earnings from self-employment were regarded as remunerative or not. The current earnings from self-employment was regarded as remunerative if total earnings from self-employment was able to meet the desired level of income of the individual under the existing situation in respect of type of activity, scale of operation of the business(s), market condition, location of the business, etc. If the actual earnings from the self-employment activities fell short of the desired level, the employment was not regarded as remunerative. From all the self-employed members of the busehold, desired level of earnings in a month from all self-employment activities was also recorded in terms codes.
- 2.33 **Present spell of unemployment:** The present spell of unemployment meant the continuous period for which a person remained unemployed starting from the day the person became unemployed to the survey date. For the new entrants into the labour force, the present spell meant the entire length of unemployment till the date of survey, starting from the day such person joined in the labour force. For those who had any previous employment, the present spell meant the period starting from the day they were seeking or available for work after loosing their last employment to the survey date.

- 2.34 *Approximate number of months without work*: The months without work were not necessarily continuous. The 'approximate number of months without work' included those months in which a person was either unemployed or was not in the labour force. For deciding the number of months without work, each of the 12 months was considered separately and if, in a month the period without work was reported to be 15 days or more, it was considered as a month without work.
- 2.35 Existence of union/association in the activity: Union/association was meant to any registered/recognised body whose membership is open to a section of those engaged in a specific activity or trade and whose main objective is to look into the interests of its members. Thus, besides the usual trade unions, union/association covered the association of owners, self-employed persons, etc.
- 2.36. *Informal Employment*: According to the 17th International Conference of Labour Statisticians (ICLS) framework, informal employment is identified by jobs classified by status of employment of various categories of workers engaged in different types of production units consisting of (a) formal sector enterprises, (b) informal sector enterprises, and (c) households which produce goods for their own final use and/or those employing domestic workers. The status of employment of the workers performing the jobs may be (a) own account workers, (b) employers, (c) contributing family workers, (d) employees, or (e) member of informal producers' co-operatives. The employment in the above categories may be formal or informal depending upon the type of enterprises in which the workers are engaged or the nature of work they perform.

Accordingly, the informal employment comprises jobs held by:

- own-account workers and employers who have their own informal sector enterprises;
- contributing family workers, irrespective of whether they work in formal or informal sector enterprises;
- employees who have informal jobs, whether employed by formal sector enterprises, informal sector enterprises, or as paid domestic workers by households;
- members of informal producers' cooperatives; and
- persons engaged in the own-account production of goods exclusively for own final use by their household, such as subsistence farming or do-it-yourself construction of own dwellings.

In the 61st round survey, certain information for usual status workers engaged in industry groups 012, 014, 015 and divisions 02 to 99, has been collected to identify informal employment. The relevant information which are useful in this respect are status in employment, type of enterprise, type of job contract, availability of social security benefits, nature of job, existence of union/association, etc.

2.37 **Procedure for determining household type**: On the basis of the sources of the household's income during the last 365 days preceding the date of survey, the household types were assigned. For this purpose, only the household's income from economic activities was considered. The income of servants and paying guests was not taken as the income of the household. For the **rural** areas, household types were as follows:

self-employed in non-agriculture; agricultural labour; other labour; self-employed in agriculture; others.

For **urban** areas, the household types were as follows:

self-employed; regular wage/salary earning; casual labour; others.

- 2.38 Procedure for determining household industry and occupation: To determine the household principal industry and occupation, the general procedure followed was to list all the occupations pertaining to economic activities pursued by the members of the household excluding those employed by the household and paying guests (who in view of their staying and taking food in the household were considered as its normal members) during the one year period preceding the date of survey, no matter whether such occupations were pursued by the members in their principal or subsidiary (on the basis of earnings) capacity. Out of the occupations listed that one that fetched the maximum earnings to the household during the last 365 days preceding the date of survey was considered as the principal household occupation. If one or more members of the household pursued the household occupation in different industries, the particular industry out of all the different industries corresponding to the principal occupation, which fetched the maximum earnings, was considered as the principal industry of the household.
- 2.39 Procedure for collecting monthly per capita consumer expenditure (MPCE): For collection of data on total expenditure of the household from employment and unemployment schedule (Schedule 10), a worksheet was used in the Schedule 10 of the 61st round. The approximate value of consumer expenditure obtained through the worksheet has been used for studying employment and unemployment characteristics by different levels of living of the household members. The worksheet contained 36 different components of household consumer expenditure. Depending upon the type of item, either of the two reference periods viz, 30 days and 365 days, was used to record consumption of different groups of items. The items of consumption were classified into four groups and three different approaches viz (a) consumption approach, (b) expenditure approach and (c) first-use approach, were followed for defining consumption of items. The different groups were (i) food (other than 'cooked meals'), pan, tobacco & intoxicants and fuel & light, (ii) cooked meals, miscellaneous goods and services including education, medical, rent, taxes and cess, (iii) clothing and footwear and (iv) durable goods. The procedure followed for defining consumption of the four groups were (i) consumption approach, (ii) expenditure approach, (iii) first-use approach and (iv) expenditure approach, respectively. The definition of household consumer expenditure and the procedure for evaluating that was the same for both Schedule 10 and Schedule 1.0.

2.40 **Procedure followed for collecting employment and unemployment particulars in different NSS rounds:** In the annual rounds, only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach are collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). Particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected in the annual rounds by following a similar approach as in the quinquennial rounds. In the quinquennial rounds, particulars of current daily status of the household members are collected and current weekly status is derived from them, whereas in the annual rounds, current weekly status has been obtained through a direct query. In the 60th round, a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment was colleted in the same manner as that of the quinquennial rounds.

Chapter Three

Households and Population

3.0. Introduction

3.0.1 *General*: As stated earlier in Chapter One, the NSS 61st round survey was conducted during July 2004-June 2005. To study the employment-unemployment situation of a country, it is necessary to look into the socio-economic structure of the households and the demographic pattern of the population of the country during that time. As such, certain information on socio-economic condition of sample households and demographic data pertaining to the surveyed individuals were also collected in this survey. In this chapter, the main findings relating to these aspects have been presented. The estimates are given for India and its constituent states and union territories with an effort to present a more detailed picture at the all-India level. Discussions are mainly centered on the all-India estimates. A comparison with earlier survey results is also done in some cases, at the all-India level.

3.0.2 *Use of estimated aggregates*: Compared to the census population or the projections thereof, population estimates from the NSSO surveys are, in general, on the lower side. This difference arises mainly due to the differences in coverage and methods adopted in NSS in comparison with the census operation. However, the ratios obtained from the survey are expected to be robust. This is why the estimates on employment- unemployment are presented as ratios. To estimate an absolute number in any category, it is advisable to apply the survey estimates of ratios to the census population or projections thereof, for that category. The estimates of aggregates given in the detailed tables in the Appendix A may help to combine the ratios but may not be used for deriving estimates of absolute numbers for a characteristic. It may also be noted that as the tables are generally presented as per thousand distributions, the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

3.0.3 Reference period of the estimates: The estimates presented in the report, in general, refer to the mid point of the survey period (July 2004 – June 2005) of NSS 61st round i.e. 01.01.05. The estimates for 'land cultivated' have the reference period of the agricultural year 2003-04 i.e. July 2003 –June 2004. It may be noted that the estimates of aggregates given in the detailed tables help only to combine ratios. To arrive at the absolute number in any category, the survey estimates of ratios are to be applied to the projected populations as on 01.01.2005, the mid-point of the 61st round survey period (July 2004 to June 2005).

3.0.4 *Major states*: The discussions in the summary findings have mostly been restricted to estimates of the major states though the all-India estimates are based on the data of all the states and union territories. In the state/u.t. tables, placed at the end of the chapters, estimates for all the states and union territories have been presented. It may be noted that the estimates given for smaller states and union territories may not be reliable due to small sample size. The major states are those with

population one crore¹ or more as per population census 2001 in respect of rural or urban sector separately. As per this criteria, there are 20 major states in the rural areas and 21 major states in the urban areas. The major states are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Himachal Pradesh, Jammu & Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, Uttaranchal, West Bengal and urban Delhi.

3.1 Estimates of Household and Population

3.1.1 Statement 3.1 gives the estimates of number of households and number of persons along with average household size and sex ratio (number of females per 1000 males) as obtained from NSS 61st round. As per the survey estimates, about 972 million people stayed in 207 million households in India. A little over 73 per cent of the households belonged to rural India and accounted for nearly 75 per cent of total population.

3.1.2 Statement 3.2 gives the household size and sex ratio over the years from 1977-78 up to

Statement 3.1: Estimated number of households, number of persons, average household size and sex ratio during 2004-05

all-India estimates rural urban rural+urban (1) (2)(3)(4) number of households (00) 1501676 569821 2071496 number of persons (00) 2475514 9718974 7243460 average household size (0.0) 4.8 4.3 4.7 sex ratio (females per 1000 males) 962 920 951

2004-05. It is seen from statement 3.1 that, during 2004-05, the sex ratio in India was 951. The average household size for the rural was 4.8, which was a little higher than the urban average of 4.3. For every 1000 males, the number of females was more in

the rural (962) as compared to the urban areas (920).

¹ 10 million = 1 crore

Statement 3.2: Average household size (0.0) and sex ratio over the different NSS surveys

all-India

NSS rounds	rura	<u>.l</u>	<u>urb</u>	an
(survey periods)	household	sex- ratio	household	sex- ratio
	size		size	
(1)	(2)	(3)	(4)	(5)
61 st (July 2004- June 05)	4.8	962	4.3	920
55 th (July 1999- June 00)	5.0	959	4.5	915
50 th (July 1993- June 94)	4.9	944	4.4	905
43 rd (July 1987- June 1988)	5.1	948	4.7	912
38 th (January – December 1983)	5.1	963	4.7	905
32 nd (July 1977- June 1978)	5.2	959	4.9	904

3.1.3 Change over the years: It is seen from the statement that the sex-ratio increased in 2004-05 over the periods 1993-94 and 1999-2000 – more so in the rural areas than in the urban areas. This is a reversal of the trend seen between 1983 and 1993-94 in the rural areas, during which period, the ratio declined gradually. As regards the household size, the estimate was marginally lower than that in 1999-2000, both in the rural and urban areas.

Statement 3.3: Number of female headed households, household size and sex-ratio for the female headed households during 1993-94, 1999-00 and 2004-05

all-India characteristics of the rural urban 1999-00 female headed hhs 1993-94 2004-05 1993-94 1999-00 2004-05 (1)(2) (3)(4)(5)(6)(7) no. of female headed 97 104 113 106 94 111 hhs per 1000 hhs 3.5 3.4 3.2 3.5 household size (0.0) 3.2 3.5 1820 1706 1599 1861 1771 1721 sex- ratio

3.1.4 Information on sex of the head of household was collected in the survey. Number of female-headed households per 1000 households along with the sex-ratio and household size obtained for such female-headed households during 1993-94, 1999-2000 and 2004-05 are shown in Statement 3.3 for all-India. It is observed that during 2004-05, about 11 per cent of households of rural as well as urban India were headed by females. Compared to all households, they had, on an average, a relatively smaller household size and a much higher sex-ratio. As in the case for all households, for female-headed households too, the household size seems to have slightly decreased in between 1999-2000 and 2004-05 in the rural areas, although it showed slight increase between 1999-2000 and 2004-05 in both the rural and urban areas.

3.1.5 *State-level results*: The corresponding estimates as obtained for each state and union territory in the present survey are presented in Statement 3.3.1. Among the major states, the proportion of female-headed households was highest in Kerala in both the rural areas (23 per cent) and urban areas (25 per cent). The all-India feature of smaller household size (rural: 3.4, urban: 3.5) and higher sex-ratio in female-headed households (rural: 1771, urban: 1599) as compared to all households is noticeable in the major states.

3.2 Household Type

3.2.1 The nature and type of work from which a household derives its major income is an important indicator of the activity pattern of its members. In the survey, every sample household was, therefore, categorised into *household types*, depending on the economic activity of the members of the household during the 365 days preceding the date of survey from which major income of the household was generated. The distribution of households and the corresponding population by *household type* for all-India is given in Statement 3.4.

Statement 3.4: Per 1000 distribution of households and population by household type during 1993-94, 1999-00, 2004-05

						all-India
household		households			population	
type	1993 - 94	1999-00	2004-05	1993 - 94	1999-00	2004-05

- 3.2.2 Statement 3.4 reveals that during 2004-05, members of about 52 per cent of the rural households took recourse to *self-employment*. They constituted nearly 57 per cent of the rural population. Another 35 per cent of the rural population belonged to *rural labour* households. Such households constituted 37 per cent of all rural households. Among urban households, *regular employment* was the mainstay of 41 per cent of households with an almost equal share (40 per cent) of urban population. Nearly 38 per cent of the urban households had income mainly from *self-employment*. While, in rural areas, the proportion of households depending on *self-employment* had declined by 4 percentage points between 1993-94 and 1999-2000, there has been an increase in the proportion by 6 percentage points between 1999-2000 and 2004-05. The said proportion, in urban areas, although remained at almost the same level between 1993-94 and 1999-2000, increased by 3 percentage points between 1999-2000 and 2004-05. On the other hand, the proportion of households depending mainly on casual employment declined by 2 percentage points between 1999-2000 and 2004-05, while the proportion of households depending mainly on regular wage/salaried employment remained almost at the same level during that period.
- 3.2.3 *State-wise distribution:* The distributions of households and persons by household type for different states and union territories are given in Statements 3.4.1 and 3.4.2 respectively, for both the rural and urban areas.
- 3.2.4 *Rural areas:* In the rural areas, *self-employment* was the major activity of the households in many of the major states. Among the major states, the proportion of *self-employed* households was highest in Uttaranchal, Jammu & Kashmir and Uttar Pradesh (68 per cent each) followed by

Rajasthan (66 per cent), Assam (66 per cent), Himachal Pradesh (57 per cent) and Madhya Pradesh (56 per cent).

3.2.5 *Urban areas:* On the other hand, *regular employment* was the main activity of urban households in most of the major states. About 48 per cent of the urban households in Maharashtra were found to depend on *regular employment*. In this respect, the other states close to the rank of Maharashtra were Haryana (47 per cent), Chhattisgarh (46 per cent), Gujarat (45 per cent), Punjab (44 per cent) and Assam (44 per cent). In the urban areas, among the major states, the percentage of *self-employed* households was higher in Uttar Pradesh (49), Jammu & Kashmir (49), Bihar (47) than that in other major states, and the percentage of *casual labour* households was much higher in Kerala (25) and Himachal Pradesh (24) than that in other major states.

3.3 Monthly Per Capita Expenditure (MPCE)

3.3.1 Household income, or for that matter 'level of living', is highly related to employment characteristics and underlying earnings of the household members. Thus, the distribution of households and population by income level is an useful background information for a correlative study on 'employment' or 'unemployment'. As it is difficult to collect reliable income data, the NSSO, collects data on consumption expenditure in its surveys. In the present survey on employment-unemployment, data on consumption expenditure was collected through a separate work-sheet which was integrated with the employment-unemployment schedule (see Appendix C). The work-sheet is an abridged version of the detailed schedule used for consumption items in the parallel full-fledged consumer expenditure survey. The abridged work-sheet that was used to reduce the respondent fatigue is known to understate the level of consumer expenditure in comparison with the detailed schedule. Based on the abridged work-sheet, monthly per capita consumer expenditure was worked out for each sample household, which is expected to serve as a close proxy for income. The distributions of households and the corresponding population by MPCE class for all-India are presented in Statement 3.5.1 (for households) and in Statement 3.5.2 (for persons).

Statement 3.5: Per 1000 distribution of households and population by MPCE (Rs.) class during 2004-05

all-India

1155 & above	60	40	2540 & above	74	49
all classes	1000	1000	all classes	1000	1000

3.3.1.1 The class limits for the MPCE classes given in the statements and appendix tables of this report are based on the data collected in detailed Schedule 1.0 (Household Consumer Expenditure) in this round. The class limits of MPCE classes were determined, separately for the rural and urban sectors of all-India, in such a manner that each of the first two and last two classes contained 5% of the population and each of the remaining classes contained 10%.

3.3.2 In urban India, about 42 per cent of the households – which accounted for nearly 51 per cent of the population – spent less than Rs. 790/- per month per person. On the other hand, in rural India, about 41 per cent of the households – which accounted for 47 per cent of the population – could spend up to of Rs. 455/-. The proportion of households spending Rs.890/- or more per capita was as low as 13 per cent in rural India, whereas in urban India, about 48 per cent of households was spending Rs. 930/- or more per month per person.

3.4 Households and Particulars of Land

3.4.1 In rural India, a majority of the households depend mainly on agricultural activities and thus land is the main source of employment for their members. Hence, it is important to study certain aspects of land viz. the particulars of its ownership, possession and cultivation by the rural households. These aspects are discussed one by one in the following paragraphs.

Statement 3.6: Per thousand distribution of rural households by size class of land owned for each household type

all-India								rural
size class of				household	type			
land owned	se	lf employed	1	rura	al labour		others	all
(hectares)	agri- culture	non- agricul- ture	all	agricul- tural labour	other labour	all		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
0.000	9	67	27	59	119	77	205	66 (66)
0.001 - 0.004	9	123	43	173	145	165	113	96
0.005 - 0.40	179	603	308	592	587	591	450	428
0.41 - 1.00	299	129	247	125	106	120	122	186
0.001 - 1.00	487	855	598	890	838	876	685	710 (730)
1.01 - 2.00	248	47	186	39	28	36	61	117 (108)
2.01 - 4.00	170	22	125	8	11	9	34	72 (60)
4.01 & above	86	9	63	2	5	3	16	35 (36)
all classes	1000	1000	1000	1000	1000	1000	1000	1000

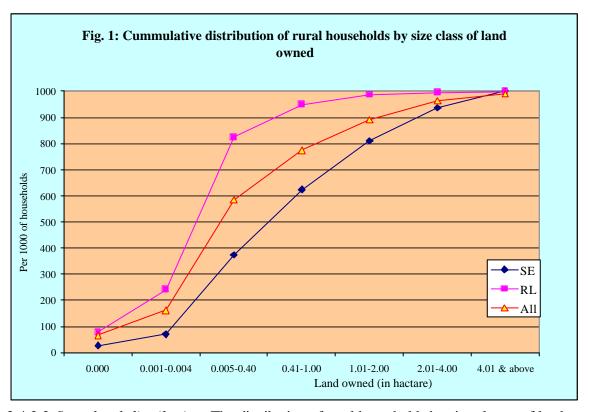

Note: 1. The households with size class of land owned '0.000' hectares comprise households owned land less than 0.001 hectares as well as households which reported no information on land owned.

2. Figures in parentheses give the distribution of households obtained from the Land Holding Survey (Sch. 18.1) of

NSS 59th round.

3.4.2 *Ownership of land*: So far as the ownership of land is concerned, information on size of land owned as on the date of survey was collected in the survey. In Statement 3.6, the distribution of rural households by size class of land owned is shown for each *household type* at the national level. The corresponding distribution obtained from the land holding survey of NSS 59th round is also presented (in parentheses) in the statement. In Figure 1, cumulative distribution of the households, viz. *self-employed* (SE), *rural labour* (RL) and *all households* (All) is presented.

3.4.2.1 The distribution of land among the rural households is found to be highly skewed and the nature of skewness depends largely on the *household type*. During 2004-05, nearly 71 per cent of the households owned land of size 0.001 hectares to 1.00 hectares. The situation was the worst for *other labour* households - about 84 per cent of them owning land from 0.001 hectares to 1.00 hectares. On the other hand, 50 per cent of households depending on *self-employment in agriculture* owned land more than 1.00 hectares.

3.4.2.2 State level distribution: The distribution of rural households by size classes of land owned for each state and union territory is given in Statements 3.6.1. The statement shows that among the major states, the proportion of rural households owning land from 0.001 hectares to 1.00 hectares was as high as 86 per cent in Kerala, 84 per cent each in West Bengal and Bihar, 83 per cent in Jammu & Kashmir and 79 per cent each in Uttaranchal and Tamil Nadu. However, in some major states, proportion of households owning land with size exceeding 1.00 hectare was quite substantial – it was 45 per cent in Rajasthan and 43 per cent in Madhya Pradesh as against about 22 per cent at the all-India level.

^{3.} The classes for which the tables are generated based on Schedule 18.1, NSS 59th round, are different from those for which the tables are generated for Schedule 10, NSS 61st round. Hence, for some of the size classes of land owned in this Statement, the figures from Schedule 18.1 are blank.

3.4.3 Land possessed: Statement 3.6.2, placed at the end of this chapter, gives the average area of land possessed per household and the distribution of the households by size class of land possessed. As seen from the statement, in 2004-05, the average area of land possessed as on the date of survey by a rural household was 0.77 hectare. The corresponding average for a female-headed household was 0.37 hectares. As high as 75 per cent of the households possessed 0.001 hectares to 1.00 hectares of land. In rural Kerala, only 6 per cent of the households were found to possess 1 hectare or more of land and the average land possessed was as low as 0.25 hectare - the lowest among the major states. Among the major states, the states that succeeded Kerala in respect of average land possessed were West Bengal (0.31 hectare), Tamil Nadu (0.34 hectare), Uttaranchal (0.47 hectare), Bihar (0.52 hectare), Orissa (0.58 hectare) and Assam (0.92 hectare). Average land possessed was the highest in Rajasthan (1.87 hectares) followed by Madhya Pradesh (1.47 hectare) and Chhattisgarh (1.21).

3.4.4 *Land cultivated*: Information on land cultivated during the agricultural year (AY) 2003-04, i.e., July 2003 to June 2004 was collected in the employment-unemployment survey. The distributions of rural households by size class of land cultivated according to the latest three quinquennial NSS rounds, viz., 61st (2004-05), 55th (1999-2000) and 50th (1993-94), are presented in Statement 3.7.

3.4.4.1 The statement shows that during the agricultural year 2003-04, about 38 per cent of the rural households cultivated land more than 0.40 hectares. In fact, about 57 per cent of rural

Statement 3.7: Per 1000 distribution of rural households by size class of land cultivated during the agricultural years 1992-93, 1998-99, 2003-04

all-India			rural					
size class of	a	agricultural year						
land cultivated	1992-93	1998-99	2003-04					
(hectares)	(50 th round)	(55 th round)	(61 st round)					
(1)	(2)	(3)	(4)					
up to 0.40	575	632	621					
0.41 - 1.00	171	168	171					
1.01 - 2.00	135	112	113					
2.01 - 4.00	76	59	65					
4.01 & above	43	30	30					
all classes	1000	1000	1000					

Note: The households with size class of land cultivated up to 0.40 hectares comprise households cultivated land less than 0.40 hectares as well as household reported no information on land cultivated.

households were estimated to have cultivated '0.001 hectare' or more in AY 2003-04 (see detailed Table 9, Appendix A). Between 1993-94 and 1999-2000, although the distribution has shifted towards the lower size classes, that is, an increasing proportion of households have shifted gradually to the lower size classes, there was some reshuffling across size classes between 1999-2000 and 2004-05.

3.4.4.2 State-level distribution: Based on the present survey, the distributions of rural households by size class of land cultivated for different states and union territories are presented in

Statement 3.7.1. The major states where 30 per cent or more of rural households had cultivated land more than 1.00 hectare were Madhya Pradesh (42 per cent), Rajasthan (40 per cent), Chhattisgarh (39 per cent) and Assam (30 per cent).

3.5 Literacy Among Household Members

3.5.1 Literacy, together with educational attainment, determines the quality of population and is highly related to one's employment prospects. For the purposes of this survey, a person who could read and write a simple message in any language with understanding was considered a *literate*. *Literates* were further classified according to their levels of educational attainment. The discussion here is restricted to persons in the age-group 15 years and above. The proportion of households with no *literate* member is given in Statement 3.8 for India as a whole, and in Statement 3.8.1 for different states and union territories.

3.5.2 Statement 3.8 shows that, during 2004-05, in India, in as many as 26 per cent of the households in the rural areas and 8 per cent in the urban areas, there was not a single member in the age-group 15 years and above who could read and write a simple message with understanding.

Statement 3.8: Number of households with no literate member/ female member of age 15 years and above per 1000 households during 1993-94, 1999-2000, 2004-05

				all-India
	hhs. w	ith	hhs. with n	o literate
round (year)	no literate r	nember	female m	ember*
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
61 st (2004-05)	261	84	500	195
55 th (1999-00)	321	119	609	341
50 th (1993 – 94)	370	143	678	397

^{*} the denominator for these ratios are all households irrespective of whether there is any female member in the households or not.

Further, as high as 50 per cent of the rural and 20 per cent of the urban-households had literate female no member. It may be noted that compared to the period 1993-94 to 1999-2000. the improvement in this regard had been much faster during the period 1999-2000 to 2004-05.

3.5.3 *State-wise variations*: As seen from Statement 3.8.1, the state-wise variations in these proportions during 2004-05 were quite significant. Among the major states, the proportion of households with *no literate* member of age 15 years and above was the lowest in Kerala – this proportion varying from 38 per cent (Bihar) to 3 per cent (Kerala) in rural areas and from 16 per cent (Rajasthan) to 1 per cent (Kerala) in the urban areas.

3.6 Households with Usually Employed Persons (PS +SS) of Age 15 Years and Above

3.6.1 Income of a household obviously depends on the number of employed persons in the household. Although income depends also on the type of work carried out by the members, the number of employed persons in a household could be taken as a broad indicator of its economic condition. The results giving the distribution of households having at least one member of age 15 years and above by number of usually employed persons of age 15 years and above are presented in Statement 3.9 for all-India. The corresponding results obtained from the 50th and 55th round surveys have also been presented to observe the changes, if any, over the period 1993-94 to 2004-05.

3.6.2 It is seen from Statement 3.9 that during 2004-05, about 4 per cent of the rural households and 8 per cent of the urban households had no usually employed member, while about 72 and 44 per cent of rural and urban households respectively had two or more members employed more or

less regularly. On the other hand, in the households where the head was a female, the proportion of households with no usually employed member was considerably higher – nearly 24 per cent in the rural areas and 26 per cent in the urban areas of India. It may be interesting to note that while among all the households only 3 to 4 per cent had 'only 1 female worker', among households headed by females, the proportion with 'only 1 woman worker' was much higher- 33 per cent in rural areas and 23 per cent in urban areas.

Statement 3.9: Per 1000 distribution of households having at least one member of age 15 years and above by number of usually employed (ps+ss) persons of age 15 years and above in those households during 1993-94, 1999-00 and 2004-05

						all-India

all	1000	1000	1000	1000	1000	1000	

- 3.6.3 Change during 1993-94 to 2004-05: Statement 3.9 reveals that the proportion of households with no worker increased from about 3 per cent in 1993-94 to 5 per cent in 1999-2000 and retained that level till 2004-05 in rural India the urban proportion being stable at the level of 8 per cent during this period. In this respect the female-headed households are poorly placed. Among the female-headed households, this proportion shows a slow but increasing trend in rural areas from 17 per cent in 1993-94 to 23 per cent 1999-2000 and then to 24 per cent in 2004-05, and in the urban, had been at 26 per cent during 1999-2000 to 2004-05 after sensing a fall of 6 percentage points between 1993-94 to 1999-2000.
- 3.6.4 *State-level distribution*: The corresponding distributions for different states and union territories based on data of the present survey are presented in Statement 3.9.1. Broadly speaking, the same pattern as that noted for all-India is also seen for the major states.

3.7 Age Distribution of Population

- 3.7.1 Age and sex are two important demographic characteristics. The distribution of population by age-group and sex as background information could improve the understanding of the results on employment-unemployment. In Statement 3.10, the distribution of the rural and urban population by 5-year age-groups is presented for males and females separately. Comparable results based on the 50th round (1993-94) and 55th round (1999-2000) surveys are also presented in this statement.
- 3.7.2 Age distribution: During the five years separating the present survey from the last quinquennial one, a small shift is visible in the population, especially among the younger groups. A slight decline in the share of the youngest age-group (0-4 years) as well as of the children aged 5-14 years in rural and 5-19 years in urban are noticeable for all the categories of persons. This distribution would help in better understanding of the results presented subsequently, as most of the results are age specific. The corresponding distributions for different states and union territories are given in Statement 3.10.1 for each sex separately for rural and urban areas.

Statement 3.10: Per 1000 distribution of population by five year age groups during 1993-94, 1999-2000, 2004-05

						all-India

all	1000	1000	1000	1000	1000	1000

3.7.3 As compared to 2001 Population Census, the percentage of population in 0-9 age-groups is lower for both males and females in rural and urban areas. Detailed investigation is required to find out the reasons for such difference. The age-distributions generated from the information contained in Schedule 1.0 (Household Consumer Expenditure) and Schedule 10 are quite close for both males and females in rural and urban areas.

3.8 General Education Level of Population

3.8.1 As mentioned earlier (in para 3.5.1), educational attainment determines the quality of a population and one's employment prospect. Thus, it is important to study the distribution of population by educational attainment (level) before a comprehensive discussion is attempted on employment-unemployment in the subsequent chapters. There is also a need to examine the changes

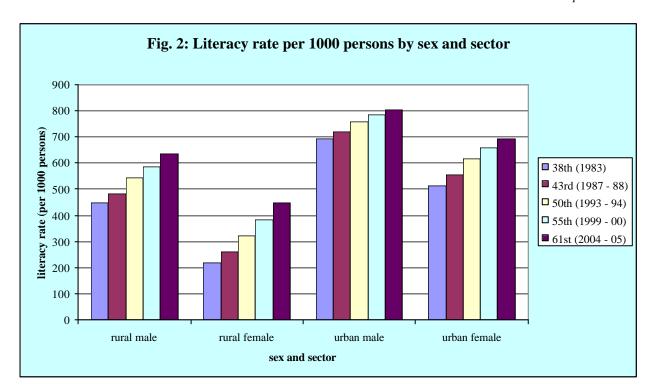

Statement 3.11: Literacy rate (per 1000 persons) by sex and for rural and urban India during 1983 to 2004-05

38 th (1983)	449	219	693	515

in the literacy rates time. over In Statement 3.11, the literacy rates (number of literates per 1000 persons) by sex as estimated from the 38th 43rd (1983),(1987 -88). 50th (1993-94),55th (1999-2000)and present quinquennial surveys employment

and

unemployment are presented for rural and urban India. In Figure 2, the literacy rates per 1000 persons are presented. It may be mentioned that in the earlier quinquennial surveys, a person who could read and write a simple message in any language was considered as literate. From the 50th round onwards, another condition viz. 'with understanding' was added for identifying literates. Over the period 1983 to 2005, it is seen that the literacy rate has increased considerably. The increase is relatively more among females than among males – both in rural and urban India. The distribution of persons by broad education level is presented in Statement 3.12 for each sex and rural-urban residence at the all-India level and those for different states and union territories for 2004-05 in Statement 3.12.1. As seen from Statement 3.12.1, there was considerable variation in the proportion of non-literate and educated (i.e., those with general educational level secondary and above including diploma/certificate course) over the major states.

Statement 3.12: Per 1000 distribution of persons by general educational level during 1993-94, 1999-2000, 2004-05

Note: Figures in parentheses are the corresponding proportions for persons of age 15 years and above.

3.8.2 *Change over* rounds: As seen from Statement 3.12, proportion of educated persons (i.e. level educational secondary and above) has increased in all the categories during the period of 11 years between 1994 and 2005. In rural India. proportions educated persons in 2004-05 were 13 and 7 per cent respectively males among and The females. corresponding proportions in urban India were 35 and 26 cent. The proportion of educated persons have increased over time for males and females both in rural

3.9 Beneficiary of

and urban areas.

Government Schemes

3.9.1 Information on whether the members of the households have been benefited from certain government schemes viz., Annapurna, Integrated Child Development Services (ICDS) Scheme,

Statement 3.13: Number per 1000 persons received benefit from Government different schemes

						all-India
name of		rural			urban	<u> </u>
scheme	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Annapurna	4	5	4	0	1	1
ICDS	18	20	19	8	9	8
Midday meal	81	77	79	31	32	32
Food for work	8	6	7	-	-	-
any of the schemes	112	108	110	39	42	41

Mid-day Meal and Food for Work, was collected in the The survey. objectives of these schemes are either to provide food security to the senior citizens; or to improve nutrition, health and education of young children, and expectant and nursing mothers; or to create wage employment in the natural-calamity-affected states. It may be noted that the Food for Work is a scheme operated in the rural areas. Moreover, the ICDS scheme is meant for the children below 6 years of age and for the expectant and nursing mothers. This information has been presented in Statement 3.13, in the form of proportion (per 1000) of persons who had been benefited from each of these schemes, at the all-India level. About 11 per cent of the population in the rural areas and about 4 per cent in the urban areas had been benefited from any of these schemes. There is hardly any gender difference among the beneficiaries. Among the specified schemes, the impact of *Mid-day Meal* scheme had been quite significant, particularly in the rural areas. About 8 per cent of the population in the rural areas and 3 per cent in the urban areas got benefited from this scheme. The impact of other schemes is found to be negligible: about 1 to 2 per cent of the population was benefited from *ICDS* scheme and less than 1 per cent was benefited from *Annapurna* scheme. *Food for Work* scheme, a rural programme, created wage employment to nearly 1 per cent of rural population.

Statement 3.3.1: Number of female headed (fh.) households per 1000 households, sex-ratio and average household size by sex of the head of the households for different states and u.t.s

Chapter Four

Labour Force

4.0 General

4.0.1 Labour force, or in others words, the 'economically active' population, refers to the population which supplies or seeks to supply labour for production and, therefore, includes both 'employed' and 'unemployed' persons. Four different estimates of the labour force have been obtained based on the three approaches adopted in the survey for classification of the population by activity status viz. *usual status*, *current weekly status* and *current daily status*. These are:

- (i) number of persons in the labour force according to the *usual status* (ps) i.e. by considering usual principal activity only,
- (ii) number of persons in the labour force according to the *usual status* (ps+ss) i.e. by considering usual principal and subsidiary activity together,
- (iii) number of persons in the labour force according to the *current weekly status* approach, and
- (iv) number of person-days in the labour force according to the *current daily status* approach.

4.0.2 The estimate of the labour force according to the usual principal status gives the number of persons who either worked or were looking for work for a relatively longer part of the 365 days preceding the date of survey. The labour force, considering both the usual principal status and the subsidiary status, includes the persons who (a) either worked or were looking for work for a relatively longer part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The labour force measured in terms of current weekly status gives the average picture of the labour force participation in a short period of one week during the survey period. The estimate of labour force according to the current weekly status provides the number of persons who worked for at least 1 hour or was seeking/available for work for at least 1 hour on any day during the 7 days preceding the date of survey. The labour force measured in terms of *current daily status* gives the average picture of the number of person-days in the labour force on a day during the survey period. For each person, 7 person days were assigned for the 7 days preceding the date of survey and the estimate of the person-days in the labour force during in the reference week was obtained by considering the number of person-days worked or was available for work during the week by adopting current daily status approach. The number of person-days in the labour force on a day during the survey period is obtained by dividing the person-days in the labour force in a week by 7.

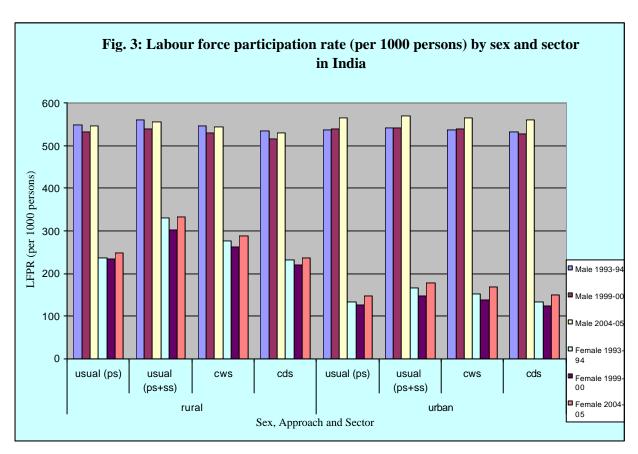

4.1 Labour Force Participation Rates (LFPR)

4.1.1 The labour force participation rate (LFPR) is defined as the number of persons/ persondays in the labour force per 1000 persons/person-days. In Statement 4.1, the LFPRs, as estimated from the NSS 61st round (2004-2005) survey, based on the different concepts are presented for all-India. The corresponding rates obtained from the 50th (1993-94) and 55th

(1999-2000) round surveys are also given in this statement for comparison. In Figure 3, the LFPR based on the different concepts are presented for NSS 50th, 55th and 61st rounds.

Statement 4.1: Labour force participation rate (LFPR) according to usual, current weekly and current daily statuses during 1993-94, 1999-2000 and 2004-2005

							all-India

cws	538	539	566	152	138	168	272
cds	532	528	561	132	123	150	247

- 4.1.2 *Usual status approach*: In 2004-05, considering 'all' (ps+ss) workers, i.e., workers according to us (ps+ss), about 56 per cent of the rural males and 33 per cent of the rural females were 'usually' available for employment. The corresponding proportions for urban areas were 57 and 18 per cent, respectively. During the period of five years ending June 2005, the usual status LFPRs increased by nearly 2 percentage points for males and about 3 percentage points for females, in rural areas. In the urban areas, during that period, the increase in LFPR was a little more for males than its rural counterparts; it increased by 3 percentage points for both males and females. On the other hand, between 1993-94 and 1999-2000, for females, usual status LFPRs taking principal status (ps) workers only remained stable in both rural and urban areas. However, when 'all workers' viz. 'workers' considering *both* principal and subsidiary statuses are considered, usual status LFPRs for females showed a decrease during the period by about 3 percentage points in rural areas and 2 percentage points in urban areas.
- 4.1.3 *Current status approach*: Compared to LFPRs of the current statuses, the usual status (all) LFPRs were higher in both the sectors and more so for females. This could be due to some among the usually employed withdrawing from labour force when there is no work during some part of the year rather than reporting themselves as unemployed in the current status. Interestingly, the difference is considerably higher for females in the rural areas where the seasonality in work is believed to be substantial.
- 4.1.4 Gender differentials in the labour force: Statement 4.1 also presents the sex ratio (i.e. number of females per 1000 males) in the labour force. The statement reveals that whatever be the approach followed, females were far outnumbered by males in the labour force to a greater extent in urban areas than in rural areas. However, when the usual status 'all workers' approach is followed, sex ratio is found to improve, particularly in the rural areas. This reflects that the feature of females being engaged in subsidiary economic activities was more frequently observed in rural areas than in urban areas.
- 4.1.5 *State level estimates*: The LFPRs based on the various alternative concepts for different states and union territories as estimated from the present survey are presented in Statements 4.1.1 and 4.1.2. Statement 4.1.1 gives LFPRs for persons of all ages and Statement 4.1.2 gives that for persons of age 15 years and above.

4.2 Age Specific Labour Force Participation Rates (ASLFPR)

- 4.2.1 During 2004-05, the LFPRs according to usual principal status are presented in Statement 4.2 for different age-groups. In Statement 4.3, the LFPRs based on usual status (ps+ss) approach, i.e. taking into account both the principal and subsidiary statuses together, are presented for different age-groups as obtained from the NSS 50th, 55th and the 61st round surveys.
- 4.2.2 It is seen from Statements 4.2 and 4.3 that the pattern in the LFPRs over the age groups are same as per both the concepts for all the categories of persons (rural male, rural female, urban male and urban female). This statement reveals that LFPR is almost nil in the age-group 5-9 years. However, in the age-group 10-14, it is almost 5 per cent for rural males, rural females and urban males, and 3 per cent for urban females. The LFPR is found to be very high in the age groups 30-49 years and starts declining thereafter.

About 63 per cent of the aged males (60 years and above) in rural areas and about 36 per cent of the aged males in the urban areas were found to be in the labour force. This figure for females was 20 per cent in rural and 9 per cent in urban areas. The comparison of the age specific LFPRs

Statement 4.2: Age specific labour force participation rates according to usual principal status during 2004-2005

measured according to the usual principal status, and usual principal and subsidiary (ps+ss) statuses taken together reveals that the incidence of participation in the labour force in the subsidiary capacity is higher among the male youths in the age groups 15-19 years and 20-24 years than that among the persons in the other age Whereas among the groups. females, the participation rate in the labour force in the subsidiary capacity is much higher in all the age groups above 14 years. The over all participation rate in the labour force in the subsidiary capacity is found to be less than 1 per cent for the males and 3 to 8 per cent for the females in India.

4.2.3 Change in LFPR during the period 1993-94 to 2004-05: It is seen from statement 4.3 that, compared to the rates in 1993-94, among rural males and females, the LFPR has declined in the younger age groups during 2005. For the other age-groups, there had been a fall in the LFPR between 1993-94 and 1999-2000, but compensated with a similar rise in the rates between 1999-2000 and 2004-05. In urban areas, the pattern closely resembled that seen for the rural areas, except for the aged males (60 years and above) for whom the LFPR showed a systematic fall from 44 per cent in 1993-94 to 40 per cent in 1999-2000, and then to nearly 37 per cent in 2004-05. The age specific LFPR for the NSS 61st round is presented in Figure 4.

Chapter Five

Employed (Work Force)

5.0 General

5.0.1 In this chapter, the estimate of the work force (or employed) and its structure are discussed. In order to study the trend, earlier survey estimates are provided. The survey has generated four different estimates of the employed based on the three approaches used in classification of the activity statuses of the person surveyed. These are:

- (i) number of persons employed according to the *usual status* (ps) i.e. by considering usual principal activity only,
- (ii) number of persons employed according to the *usual status* (ps+ss) i.e. by considering usual principal and subsidiary activity together,
- (iii)number of persons employed according to the current weekly status approach, and
- (iv) number of person-days employed according to the current daily status approach.

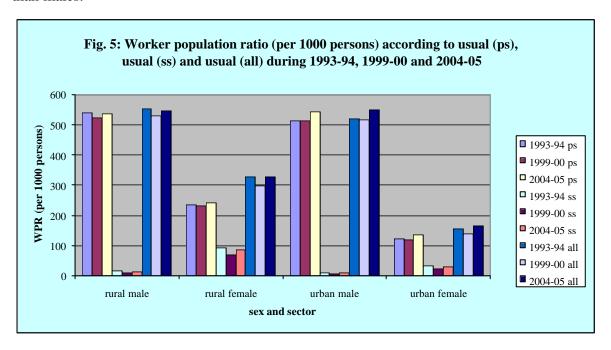

5.0.2 The estimate of employed (or worker) according to the usual principal status gives the number of persons who worked for a relatively longer part of the 365 days preceding the date of survey. The work force, considering both the usual principal status and the subsidiary status, includes the persons who (a) either worked for a relatively longer part of the 365 days preceding the date of survey and (b) also those persons from among the remaining population who had worked at least for 30 days during the reference period of 365 days preceding the date of survey. The work force measured in terms of current weekly status gives the average picture of the work force in a short period of one week during the survey period. The estimate of work force, according to the current weekly status provides the number of persons worked for at least 1 hour on any day during the 7 days preceding the date of survey. The work force measured in terms of current daily status gives the average picture of the person-days worked in a day during the survey period. For each person, 7 person-days were assigned for the 7 days preceding the date of survey and the estimate of the number of person-days worked in the reference week was obtained on the basis of the person-days worked according to the current daily status approach. The number of person-days worked on a day during the survey period is obtained by dividing the person-days worked in a week by 7.

5.0.3 The number of persons/person-days employed per thousand persons/person-days is referred to as work-force participation rates (WFPR) or worker-population ratio (WPR). This ratio is used in the following discussion on the employed.

5.1 Usually Employed

5.1.1 Statement 5.1 presents the worker-population ratios (WPRs) for two categories of usual status workers viz. (a) usual principal status workers i.e. workers according to usual status (ps) and (b) usual subsidiary status workers i.e. persons working only in a subsidiary status (ss workers). In Figure 5, the WPRs for usual principal status, usual subsidiary status and usual (ps+ss) are presented for the years 1993-94, 1999-00 and 2004-05. The two categories together constitute the total usually employed (or 'all' workers) i.e. workers according to the usual status (ps+ss). The first category pertains to those with more or less stable employment. WPR figures corresponding to 'all' workers in Statement 5.1 shows that 55 per cent of the males and 29 per cent of the females were workers. It is also seen from Statement 5.1 that WPR was the same for males in rural and urban areas whereas this was much higher for rural females (33 per cent) as compared to the urban females (17 per cent). Both in the rural and

urban areas, the WPRs according to usual subsidiary status (ss) were much higher for females than males.

Statement 5.1: Number of persons employed per 1000 persons (i.e., WFPR or WPR) according to usual status during 1972-73 to 2004-2005

ps = principal status; ss = subsidiary status; ps+ss: $principal and subsidiary status taken together *: proportions not derived for NSS <math>27^{th}$ round

- 5.1.2 Usually employed over the rounds: Statement 5.1 also gives the WPRs obtained from all the seven quinquennial surveys conducted by NSSO. It may be noted that due to certain procedural differences for the 27th round, WFPR values pertaining to usual status are comparable only with respect to 'all workers', and hence, are presented for that category only. The statement shows that, relative to 1999-2000, in rural areas, WFPRs for males in 2004-05 was higher by about 2 percentage points while that for females was higher by about 3 percentage points. In urban areas, the rates were higher by 3 percentage points for both males and females in 2004-05 than that in 1999-2000.
- 5.1.3 WPR for states and union teritorries during 2004-05: To study the regional disparities in the usual status WFPRs, the estimates based on the 61st round results on usual status worker- population ratio in terms of 'principal status' and also 'principal as well as the subsidiary status taken together' are presented for all the states and union territories in Statement 5.1.1 separately for males, females and persons by their rural-urban residence. The discussion below is restricted mostly to figures based on 'all' workers (i.e workers according to usual status (ps+ss)).
- 5.1.4 *Rural males*: During 2004-05, among the major states, the percentage of usual status (ps+ss) workers (i.e. 'all' workers) among rural males was highest in Karnataka (62 per cent) followed by Andhra Pradesh (61 per cent), Tamil Nadu (60 per cent), Gujarat (59 per cent) and Orissa (59 per cent). Other major states with WPRs well above the national average of 55 per cent for rural males are West Bengal and Maharashtra (57 per cent each). The WPR for rural male was the lowest in Bihar (48 per cent) preceded by Uttar Pradesh (50 per cent) and Rajasthan (51 per cent).
- 5.1.5 Rural females: Among the major states, Himachal Pradesh (51 per cent) and Andhra Pradesh (48 per cent) reported much higher WPRs than other major states. States like Maharashtra (47 per cent), Tamil Nadu and Karnataka (46 per cent each) and Chhattisgarh (45 per cent) also reported high WPRs. Bihar (14 per cent) reported the lowest WPR for rural females and was preceded by West Bengal (18 per cent). The percentage of female subsidiary status workers was relatively very high in Punjab (28 per cent), Haryana and Jammu & Kashmir (20 per cent each) and Rajasthan (14 per cent). It is seen that the major states reporting a low percentage of usually employed (principal status) rural females also reported a high percentage of employed in terms of the subsidiary status.
- 5.1.6 *Urban males*: In the urban areas, among the major states, the male WPR was much higher than the national average of 55 per cent for Himachal Pradesh (62 per cent), West Bengal (60 per cent), Tamil Nadu (59 per cent), Gujarat and Karnataka (58 per cent each) and Punjab (57 per cent). Rather low rates are reported by some states like Bihar (45 per cent) and Jharkhand (47 per cent).
- 5.1.7 *Urban females*: For urban females, among the major states, Tamil Nadu and Himachal Pradesh (24 per cent each), Andhra Pradesh (22 per cent) and Kerala (20 per cent) reported higher than average WPRs. The proportion of subsidiary status workers among urban females was relatively higher for Rajasthan, Haryana, Kerala and Uttar Pradesh as compared to the other major states.

5.2 Age Specific Usual Status Worker-population Ratio (ASWPR)

- 5.2.1 The number of persons usually employed in a particular age-group per 1000 persons in that age-group is defined as the age specific worker-population ratio (ASWPR). Based on the age recorded, the ASWPRs are estimated from the 61st round (2004-05) data for age groups of five year interval up to the age of 60 years and for the age group 60 years and above, for both the principal status (ps) workers and 'all' workers. The relevant results, separately for rural and urban areas, are presented for all-India in Statement 5.2 and for states and union-territories in Statement 5.2.1 (for workers according to the usual status (ps)) and in Statement 5.2.2 (for 'all' workers i.e. workers according to the usual status (ps+ss)). Comparable all-India results based on the 50th round (1993-94) and 55th round (1999-2000) surveys are also presented in Statement 5.2.
- 5.2.2 Change in ASWPR during the period 1993-94 to 2004-05: It is seen from Statement 5.2 that, compared to the rates in 1993-94, among rural males and females, the ASWPR has declined in the younger age groups over the period ending with 2005. For the other age-groups, there had been a fall in the ASWPR between 1993-94 and 1999-2000, but compensated with a similar rise in the rates between 1999-2000 and 2004-05. In urban areas, the pattern closely resembled that seen for the rural areas.

5.3 Age Composition of the Usually Employed

- 5.3.1 Statement 5.3 shows the per 1000 distribution of the usually employed persons by age-group for all-India for both the principal status (ps) workers and all workers as obtained from the present survey as also that from the 50th (1993-94) and 55th (1999-2000) round surveys.
- 5.3.2 It is seen from Statement 5.3 that for 'all' workers during the year 2004-05, more than two-thirds of the usually employed were in the age-group 15 to 44. The proportion of the usually employed males in this age bracket is 69 per cent in rural and 73 per cent in urban areas. For the females, the corresponding percentages are 71 and 74. Further, during this period, about one-fifths of the usually employed belonged to the age-group 45-59. The oldest group (i.e age-group 60 and above) accounted for about 4 to5 per cent of the usually employed in urban areas. However, in rural areas, about 8 per cent of usually employed males and 6 per cent of usually employed females belonged to this group.
- 5.3.3 Change in distribution during the period 1993-94 to 2004-05: During 1993-94 and 1999-2000, the estimated proportions of the usually employed in the age-groups of 45-59 or 60 & above were broadly the same as those for 2004-05 for males or females, in either rural or urban areas. This observation holds true for the age-group 15 to 44 considered as a whole. However, for the age-group 15-29, in the rural areas, a small decrease of about 1 percentage point for males and 2 percentage points for females is observed in the proportions between 1993-94 and 1999-2000 as well as between 1999-2000 and 2004-05. But, similar trend is not observed for the age-group 15-29 in the urban areas. On the other hand, for the age-group 30-44, a small increase in the proportions between 1993-94 and 1999-2000 as well as between 1999-2000 and 2004-05 is observed in the rural areas which is almost commensurate with the decrease noted against the age-group 15-29.

all(0+)

Statement 5.2: Age specific usual status worker population ratio (ASWPR) during 1993-94, 1999-2000 and 2004-2005

Statement 5.3: Per 1000 distribution of usually employed by age-group during 1993-94, 1999-2000 and 2004-2005

5.4 Usual Status Worker Population Ratio and Monthly Per Capita Expenditure

5.4.1 As stated earlier, 'employment' of the household members is highly related with household income and in turn, with the household monthly per capita expenditure – a close proxy for household income. Thus, the worker population ratio (WPR) has been given for

Statement 5.4: Number of persons employed per 1000 persons (WPR) according to usual status (ps+ss) and sex ratio (per 1000) among workers by MPCE class

each MPCE class in Statement 5.4 separately at the all-India level. It is evident from the statement that the WPR. particularly for the males, is found to increase steadily with the increase in MPCE of households, in both the rural and urban areas. But for the pattern females. the somewhat different. In the rural areas, the WPR was about 31 per cent for the bottom MPCE class and about 29 per cent in the next MPCE class (Rs. 235-270). Thereafter, the WPR seems to have marginally increased up to the MPCE classes (Rs. 580 - 690) but has declined over the top three MPCE classes. On the other hand, in the urban areas, a declining pattern over the MPCE classes is observed in the WPRs for females except highest class. The sex ratio among workers over the MPCE classes reveals that compared to the richer households, more number of females than the males belonging to the households of lower **MPCE** classes. particularly in the rural areas, had to work. The worker

population ratio for the states and union territories are given in Statement 5.4.1 separately for each sex and sector. Similar observations, as for all-India, are noted among the major states.

5.5 Education Level Specific Usual Status Worker Population Ratio for Persons of Age 15 Years and Above

5.5.1 Among persons of age 15 years and above, the number of persons who are usually employed in a particular education category per 1000 persons in that education category is defined as the education level specific worker population ratio. For working out such education specific worker-population ratios, the persons of age 15 years and above are

classified into 7 categories viz., 'not literate', 'literate and up to primary', 'middle', 'secondary', 'higher secondary', 'diploma/ certificate' and 'graduate and above'. In the 61st round survey, general educational level was recorded as 'diploma/ certificate' for those who completed diploma or certificate course that was below graduation level. Diploma/ certificate courses, which were of graduation level or above, were classified under the respective class of general education. In the earlier surveys, such people were classified against the equivalent level of general education. The relevant worker-population ratios for rural and urban India for both the principal status (ps) workers and 'all' workers are shown in Statement 5.5. The corresponding results for 1993-94 and 1999-2000 obtained from NSS 50th and 55th round surveys, respectively are also presented in this statement. As done earlier, discussions are restricted to 'all' workers i.e. workers according to the usual status (ps+ss).

Statement 5.5: Education-level specific usual status worker population ratio for persons of age 15 years and above during 1993-94, 1999-2000 and 2004-2005

all-India female general male education 1993-94 1999-2000 2004-2005 1993-94 1999-2000 2004-2005 level all all all all ps ps ps ps all ps ps all worworworworworworworworworworworworkers kers (1) (2)(3)(4)(5) (6)(7)(8)(9)(10)(11)(12)(13)rural not literate literate & up to primary middle secondary higher secondary diploma/ certificate* graduate & above all urban not literate literate & up to primary middle secondary higher secondary diploma/ certificate* graduate & above all

^{*} In NSS 50th and NSS 55th round surveys, there was no separate code for 'diploma/ certificate' and as such the estimates of persons with general education level 'diploma/ certificate' could not be obtained separately and they were classified in the equivalent level of general education. In the 61st round survey, persons with general education level 'diploma/ certificate' which were equivalent to below graduate level were identified separately.

5.5.2 Statement 5.5 reveals that at all-India level, for rural males with educational qualification *graduate and above* (or rural male graduate, in brief), the worker-population ratio was almost same in between 1993-94 and 1999-2000. Between 1999-2000 and 2004-05, there was an increase of 1 percentage point. However, among the rural female graduates, the ratio of 366 in 1993-94 suffered a fall of about 6 percentage points in 1999-2000 and then increased to 345 in 2004-05. In urban areas, among the *graduate and above*, there was a fall in the ratio of about 2 percentage point for males in the consecutive periods, and for females, a fall of about 3 percentage points between 1993-94 and 1999-2000 followed by a rise of nearly 2 percentage points between 1999-2000 and 2004-05.

5.5.3 Education level specific usual status worker-population ratios for persons of age 15 years and above for states and union territories based on the data of the present survey are presented in Statements 5.5.1 and 5.5.2 – Statement 5.5.1 for 'ps' workers and Statement 5.5.2 for 'all' workers.

5.6 General Educational Level of the Usually Employed (15+)

5.6.1 Per 1000 distribution of the usually employed persons of age 15 years and above (referred to as 'employed' in this chapter hereafter) by education category for all-India for both the principal status (ps) workers and 'all' workers is presented in Statement 5.6. The corresponding distribution for 1993-94 and 1999-2000 obtained from NSS 50th and 55th round survey results, respectively is also presented in the statement.

5.6.2 During 2004-05, among the 'employed' rural males, about 34 per cent were *not literate* while 19 per cent were *educated* i.e. with *secondary and above* educational standard, including diploma/ certificate. On the other hand, among the 'employed' rural females, about 66 per cent were *not literate* while only about 6 per cent were *educated*. In urban India, an estimated 13 per cent of the 'employed' males and about 37 per cent of the 'employed' females were *not literate*. The estimate of the proportion of *educated* people was much higher in urban areas – with about 45 per cent of the 'employed' males and about 31 per cent of the 'employed' females reporting themselves as *educated*. In both the rural and urban areas, there was a rise of about 2 percentage points in the proportion of educated people among the usually employed in 2004-05 compared to that in 1999-2000. Between 1993-94 and 1999-2000, the rise in the corresponding proportion was faster – the rise being 3 percentage points for rural males, 1 percentage point for rural females and 5 percentage points for both urban males and females.

Summary of Findings Chapter Five Employed (Work Force)

5.7 Distribution of Usually Employed by Status of Employment

- 5.7.1 As stated earlier in Chapter Two (Concepts & Definitions), employed persons are categorised into three broad groups according to their status of employment. These broad groups are: (i) *self-employed*, (ii) *regular employees* and (iii) *casual labour*. Statement 5.7 shows the per 1000 distribution of usually employed by these broad groups for all-India for both principal status (ps) workers and 'all' workers. The statement also gives the results on the corresponding distribution obtained from the earlier quinquennial surveys. Trends in the proportion (per 1000 workers according to usual staus (ps+ss) for differn NSS rounds are presented in Figure 6 and Figure 7 for the rural and urban areas respectively. The discussion below, as before, pertains to 'all' workers.
- 5.7.2 During 2004-05, in rural India, among the usual status (ps+ss) workers ('all' workers), about 58 per cent of the males and 64 per cent of females were *self-employed*. The corresponding proportions in urban India were 45 per cent for males and 48 per cent for

females. Proportion of *regular employees* was relatively lower among females as compared to males in both rural and urban India. On the other hand, proportion of *casual labour* was higher among female workers than that among male workers in the urban areas. The proportion of *casual labour* was about 33 per cent among male as well as female workers in the rural areas.

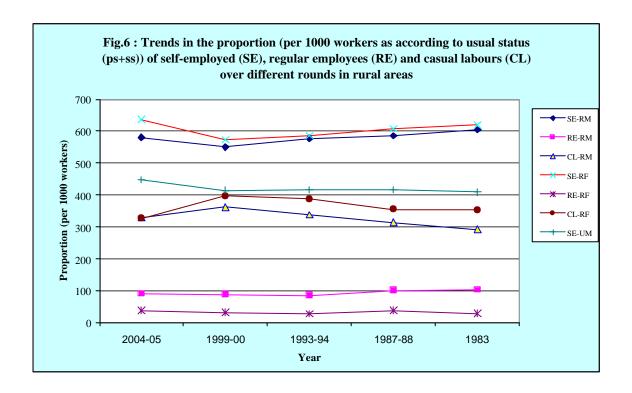

5.7.3 Change over rounds: For rural males, the proportion of self-employed had fallen from 61 per cent in 1983 to 58 per cent in 2004-05. For females, although the proportion of self-employed also showed a gradual fall, for a long period, from 62 per cent in 1983 to 57 per cent in 1999-2000; it showed a rise of 6 percentage points over 1999-2000 during 2004-05. Interestingly, compared to the self-employed, there has been a corresponding rise and fall in the proportion of casual labour over this period. During this period, though the proportion of regular employed among urban males had fallen by about 3 percentage points, among urban females, there had been an increase in this proportion – by about 10 percentage points.

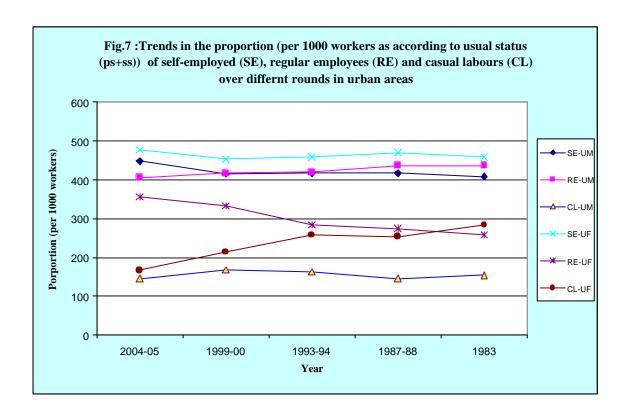

5.7.4 *State-level distribution*: The distributions of the usually employed by employment status during 2004-05 (61st round) for different states and union territories are presented in Statement 5.7.1.

Statement 5.7: Per 1000 distribution of usually employed by category of employment during 1983 to 2004-2005

5.7.5 MPCE and status of employment: Statement 5.8 presents the distribution of usually employed (ps+ss) by status of workers for each MPCE class at the all-India level. It is seen that in the rural areas, the proportion of casual labourers is found to be higher in the lower MPCE classes and lower in the higher MPCE. On the other hand, the proportion of both self-employed and regular salaried employees is found to be lower in the lower MPCE classes and higher in the higher MPCE classes. In the urban areas, the pattern is a little different. While, as in the case of rural, the proportion of casual labourers is found to be higher in the lower MPCE classes and lower in the higher MPCE and the proportion of regular salaried employees increases substantially with increase in MPCE, the proportion of self-employed decreases with the increase in MPCE. These patterns are consistent for both the males and females.

5.8 Industrial Distribution of the Usually Employed

5.8.1 As in the earlier quinquennial surveys, for the 61st round survey also, information relating to the sector (industry) of employment in which a person was working has been collected for the persons categorised as *employed*. In the case of *usually employed*, this information was collected for both the principal status (ps) as well as subsidiary status (ss) workers. Statement 5.9 shows the distribution of *usually employed* by industry, separately for usual 'principal status' (ps) workers and for 'all' workers. In this present survey as well as in the 55th round, NIC 1998 has been used for industry classification. Similar results based on the earlier quinquennial surveys are also presented in the statement. It may be mentioned that in NSS 50th Round NIC 1987 was used, while in NSS 43rd and 38th rounds NIC 1970 was used.

5.8.1.1: A concordance of activity classification between NIC 1970 and NIC 1987, and between NIC 1987 and NIC 1998 is given below in a tabular form.

	Concordance between NIC-1970	& NIC-1987 at 1-digit level of inc	dustry
NIC - 1970	industry at the 3-digit level of NIC –1970 to be excluded from	industry at the 3-digit level of NIC –1970 to be included	NIC-87 section
division	the industry division of NIC -	in the industry division of NIC

	ice between NIC-1987 & NIC-1999		NIC 00
NIC-87 section	industry at the 3-digit level of NIC –1987 to be excluded from	industry at the 3-digit level of NIC –1987 to be included	NIC-98 tabulation
section	the industry section of NIC -	in the industry section of NIC -	category
	1987	1987	87
0	101 100	230	A + B
1	191, 199		С
2 & 3	398, 394, 230	964	D
4		101 100	E
5		191, 199	F
6		398, 840, 841, 970 to 975, 979	G+H
7	733 - 736		I
8	840, 841, 897	394, 733 to 736, 922, 963	J + K
9	922, 963, 964, 970 to 975, 979	897	$\begin{array}{c} L+M+N+O\\ +P+Q \end{array}$

It may be noted that the changes in the activity classification across rounds at one digit level of industry is nominal and thus, comparison can fairly be made over the rounds at the one digit level. This fact may be taken into account in measuring the changes of workforce at one digit level over rounds.

- 5.8.2 Rural areas: The statement shows that, during 2004-05, in rural India, among 'all' usually employed, about 67 per cent of the males and 83 per cent of the females were engaged in the agricultural sector. The proportion of males engaged in the agricultural activities gradually fell from 81 per cent in 1977-78 to 71 per cent in 1999-2000, and then to 67 per cent in 2004-05. On the other hand, in the case of female workers, the proportion engaged in the agricultural activities decreased from 88 per cent in 1977-78 to 83 per cent in 2004-05. It was 85 per cent in 1999-2000. Over the years, in rural India, there has been an increase in the proportion of males engaged in 'trade, hotel and restaurant', 'transport, storage and communications' and 'construction'.
- 5.8.3 Urban areas: In urban India, the 'trade, hotel and restaurant' sector engaged about 28 per cent of the male workers while 'manufacturing' and 'services' sectors accounted for nearly 24 and 21 per cent respectively of the usually employed males. Next to these three sectors, 'transport, storage and communications', 'construction' and 'agriculture' sectors provided employment to about 11, 9 and 6 per cent respectively of the urban male workers. On the other hand, for urban females, 'services' sector accounted for the highest proportion (36 per cent) of the total usually employed, followed by 'manufacturing' (28 per cent) and 'agriculture' (18 per cent). Since 1977-78, the proportion of urban females employed in agricultural sector fell by about 14 percentage points – and in 'manufacturing' by 1 percentage point. Note that the proportion of urban females employed in 'manufacturing' sector increased from 24 per cent in 1999-2000 to 28 percent in 2004-05. Regarding other sectors, the proportion for urban females showed a rise of about 4 percentage points in 'trade, hotel and restaurant' and as high as 10 percentage points in 'services' sectors since 1977-78. The 'trade, hotel and restaurant' sector, which accounted for about 9 per cent of urban female employment in 1972-73 and 17 per cent in 1999-2000, revealed a fall in its share by about 5 percentage points during 2004-05.
- 5.8.4. State-level distribution: The per 1000 distributions of usually employed in the 'principal status' (ps) and in the 'principal as well as subsidiary status' ('all' workers) by industry for each state and union territory are presented in Statements 5.9.1 and 5.9.2 respectively.

Statement 5.9: Per 1000 distribution of usually employed persons by broad industry division (NIC 1998) during 1983 to 2004-2005

5.9 Estimates of Employed According to Current Status

5.9.1 The *usual status* approach adopted for classification of the population is unable to capture the changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly status (cws) and current daily status (cds) approaches are expected to reflect the overall effect caused by the intermittent changes in the activity pattern during the year. The latter reflects also the changes that take place even during a week. The estimates of the *employed* based on *current weekly status* give the general picture of employment in a period of 7 days while those based on *current daily status* give the general picture of employment on a day. The difference between the cws and cds rates indicates the *underemployment* of those who had some employment in the week. Statement 5.10 gives the relevant estimates of the *employed* according to *current weekly status* and *current daily status* for all-India based on the seven quinquennial surveys.

5.9.2 It is observed that compared to last quinquennial survey (NSS 55th round), the rates in the current statuses obtained from the present survey have increased in both the rural and urban areas, and also for the males and females. It may be noted that the difference between the WPRs according to cws and cds is quite substantial in the rural areas, particularly among female workers (5 to 6 percentage points) since 1993-94. This indicates that the *underemployment* among those who had some employment in the week has considerably increased in the rural areas and particularly, among female workers.

Statement 5.10: Number of persons employed per 1000 persons (WPR) according to current weekly status and current daily status during 1972-73 to 2004-2005

5.9.3 State-level estimates: The proportions of persons employed according to *current weekly status* and *current daily status* per 1000 persons by sex and residence for each state and union territory are presented in Statement 5.10.1.

5.10 Daily Wage Rates

5.10.1 Regular wage/salaried persons: Data on the average wage earnings per day received by regular wage/salaried persons and casual labourers during each of the seven days of the reference week were collected in this survey. Statement 5.11 presents the average daily wage/ salaried earnings of the regular wage /salaried persons of age 15-59 years for each educational category at all-India level. In Figure 8, wage rate for regular wage/ salaried employees of age 15-59 years are presented. It is seen from the statement that at the all-India level, apart from the rural-urban differences, the gender differential is quite pronounced in the daily wage earnings of the regular wage/salaried persons. The difference in the wage rates gets manifold across educational levels of the regular wage earners: the wage increases sharply with the increase in the level of education and is found to be highest among the regular wage earners with educational level graduates and above. The statement shows that while the daily wage earnings of a regular wage/salaried person in the rural areas was, on an average, Rs. 134; it was, in the urban areas, Rs. 194 - nearly one-and-a-half times the wage of his/her counterparts in the rural areas. Secondly, a male regular wage earner earned nearly 1.7 times that of a female regular wage earner in the rural areas, and about 1.3 times in the urban areas.

Statement 5.11: Average wage/ salary earnings (Rs. 0.00) per day received by regular wage/ salaried employees (activity status codes: 31, 71, 72) of age 15-59 years for different broad general education level

						all-India
general education		rural			urban	
level	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)

secondary & higher secondary	158.04	100.19	148.39	182.58	150.41	178.29
diploma/ certificate	214.38	200.40	211.13	274.87	237.02	267.11
graduate and above	270.02	172.70	253.19	366.76	269.17	344.14
all	144.93	85.53	133.81	203.28	153.19	193.73

- 5.10.1.1 State and union territories: Statement 5.11.1 presents the average daily wage/salaried earnings of the regular wage /salaried persons for the states and union territories. All-India features are observed among the states and union territories. There is a significant divergence in the wage rates across the states. Among the rural areas of major states, Haryana reported the highest wage earnings of Rs. 230 and Madhya Pradesh reported the lowest wage earnings of Rs. 88 for their regular wage employees. In the urban areas, among the major states, Himachal Pradesh (Rs. 282) reported the highest wage rate and Haryana (Rs.157) reported the lowest wage rate. It may be noted that contrary to all other states, the wage rate for the regular wage earners is found to be lower in urban Haryana than that in rural Haryana.
- 5.10.2 Casual Labourers: Statement 5.11.2 presents the wage rates for those casual labourers of age 15-59 years *engaged in public works* in rural areas for different states/ union territories and all-India. As seen from the statement, sample size in terms of person-days worked is rather low in many major states. At the all India level, the average daily wage-rate of casual labourers *engaged in public works* was Rs. 65.33 for males and Rs. 49.19 for females.
- 5.10.2.1 Casual labourers in other types of work: The sample size in terms of person-days worked was, however, much more when casual labourers engaged in other types of work, i.e. engaged in works other than public works, were considered. The daily wage-rates for casual labours of age 15-59 years engaged in works other than public works for different states and union territories are shown in Statement 5.11.3.
- 5.10.2.2 *Rural areas*: In general, the average wage rates for the males are higher than those for the females, and higher in the urban areas that in the rural areas. In rural areas, among the major states, the average daily wage rate for male workers was the highest in Kerala (Rs. 134.86), followed by Jammu & Kashmir (Rs. 100.24), Himachal Pradesh (Rs. 88.88), Haryana (Rs. 75.26) and Punjab (Rs. 75.14); and was lowest in Chhattisgarh (Rs. 37.60), preceded by Madhya Pradesh (Rs. 38.58), Orissa (Rs. 42.29) and Bihar (Rs. 45.41). For female workers, the rate was the highest again in Kerala (Rs. 65.75), followed by Himachal Pradesh (Rs. 62.00) and Haryana (Rs. 59.34). The average wage rate for famale casual labourers was lowest in Maharashtra (Rs. 28.16). The other similarly palced states were Chhattisgarh, Orissa, Madhya Pradesh, Karnataka and Andhra Pradesh where the wage rate for famale casual labourers was less than Rs 31.00.
- 5.10.2.3 *Urban areas*: In urban areas, among the major states, the average daily wage rate for male workers was the highest in Kerala (Rs. 137.00), followed by Jammu & Kashmir (Rs. 111.82) and Punjab (Rs. 83.90). For female workers, the rate was the highest in Bihar (Rs. 81.91), followed by Jammu & Kashmir (Rs. 81.01), Kerala (Rs. 66.96) and Himachal Pradesh (Rs. 65.92). It may be noted that for female workers, the wage rate is found to be even higher than that for the male workers in urban Bihar. Incidentally, the examination of primary data relating to urban Bihar revealed that a female casual labour who reported to have worked in a private household (NIC 98 Division 95) earned Rs. 2000 for the week. For female workers in the urban areas, among the major states, wage rate was very low for Chhattisgarh (Rs. 32.43), West Bengal (Rs. 32.95) and Orissa (Rs. 33.00).

5.11 Self-employed Persons Who Reported Their Earnings as Remunerative

5.11.1 In this survey, information was collected, for the first time, to identify the self-employed persons, according to usual status (ps+ss), whose current earnings form all the self-

employment activities during the last 365 days was, according to their perception, remunerative. Moreover, for the self-employed, the amount of earnings from the self-employment activities that was regarded by them as remunerative has also been collected. Statement 5.12 presents the proportion (per 1000) of the self-employed persons who reported their current earnings from all self-employment activities as remunerative, and their distribution over the amount of earnings regarded as remunerative by them.

5.11.2 It is important to note that earning of the self-employed was judged considering all his/her farm and non-farm business together, in which he/she was engaged in the self-employment capacity during the last 365 days, either in the principal or subsidiary status or in both. The current earnings from self-employment was regarded as remunerative if total earnings from self-employment were able to meet the desired level of income of the individual under the existing situation in respect of type of activity, scale of operation of the business(s), market condition, location of the business, etc. In case, the actual earnings from the self-employment activities were short of the desired level, the employment was not considered as remunerative.

5.11.3 It is seen from the statement that about 51 per cent of the self-employed in the rural areas regarded their current earnings as remunerative, and the proportion was about 7 percentage points higher among the self-employed in the urban areas. Among them in the rural areas, while about 21 per cent regarded an amount of even Rs. 1000 or less per month as remunerative, about 42 per cent regarded Rs. 2000 or more per month as remunerative. The corresponding proportions among the self-employed who reported their earning from self-employment as remunerative, in the urban areas, were 10 per cent and 68 per cent, respectivly. The gender differential in the overall proportion is almost nil in the rural areas, but is of the order of about 10 percentage points in the urban areas. However, a larger proportion of the self-employed females compared to the males, who reported their earning from self-employment as remunerative, regarded earnings even less than Rs. 1000 per month as remunerative.

Statement 5.12: Number of self-employed persons according to usual status (ps+ss) reporting their earning from self-employment as remunerative per 1000 of self-employed persons and their per 1000 distribution by amount (Rs.) regarded as remunerative

in the subsidiary status. For the purpose of survey, the production of goods and services meant those activities that were economic in nature when they were done for pay or profit or family gain. Moreover. voluntary participation meant that a person performed any of such activities without coercion or obligation but participated in his/her volition. and without remuneration. Note that contingencies/ minor honorarium received from institution/ the organisation against the voluntary work done was considered remuneration. The results obtained from the survey

are presented in Statement 5.13 at all-India level. It may be seen from the statement that merely 1 per cent of the non-working people in the rural areas had participated voluntarily in the production of goods and services at least for 30 days during the period of 365 days preceding the date of survey. The proportion is found to be much less than 1 per cent in the urban areas. Secondly, among the people who participated voluntarily in the production of goods and services, in the rural areas, a large proportion were engaged in the production of goods (76 per cent) and remaining were engaged in the production of services. The corresponding proportion was much lower at 25 per cent in the urban areas where a majority was engaged in the production of services. Using these results, one may attempt to adjust the worker-population-ratio (WPR) considering 'voluntary production of goods' or 'voluntary production of services' or both as economic activity. However, it appears that the effect of adjustment may not be significant.

Statement 5.1.1: Number of persons usually employed in the principal status (ps) and in the principal as well as subsidiary status (all) per 1000 persons for each state and u.t.

Chapter Six

Unemployed

6.0 General

- 6.0.1 As in the case of employed, for unemployed also, four kinds of estimates are obtained following the three different approaches. These are:
 - (i) number of persons unemployed based on usual status (ps),
 - (ii) number of persons unemployed based on usual status (ps+ss),
 - (iii) number of persons unemployed based on the current weekly status, and
 - (iv) number of person-days unemployed based on the *current daily status*.
- 6.0.2 Of these estimates, the first estimate indicates the magnitude of the persons unemployed for a relatively longer period during a reference period of 365 days and approximates to an indicator of the chronically unemployed. However, some of the unemployed on the basis of this criterion might be working in a subsidiary capacity. One can, therefore, get another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period. The former is based on usual status (ps) and is called as the *unemployed according to the usual principal status* and the latter is based on usual status (ps+ss) and is called as *usually unemployed excluding the subsidiary status workers or us (adjusted)*, which would conceptually be lower than the former.
- 6.0.3 The estimate of unemployed based on the 'weekly status' approach gives an average picture of unemployment in a short period of 7 days during the survey period. According to the current weekly status approach, a person was considered as unemployed in a week if he/she did not work even for 1 hour during the week but sought or was available for work at least for 1 hour during the week. It includes both chronic unemployment and also the intermittent unemployment of those categorised as usually employed caused by seasonal fluctuations in the labour market.
- 6.0.4 The estimate of unemployed based on the 'daily status' concept gives an average picture of unemployment on a day during the survey year. For measuring unemployment according to the current daily status approach, 7 person-days were assigned for a person for the 7 days preceding the date of survey and activity for each of the person-days was considered. A person, who did not work even for 1 hour in a day, was considered unemployed for the day if he/ she sought or was available for work for 4 hours or more, and was considered unemployed for half-day, if he/she sought or was available for work only for 1 to 4 hours. The estimate of person days unemployed on a day during the survey period is obtained by dividing the person-days unemployed in a week by 7.

The person days unemployed captures three aspects of *unemployment*, viz.:

(a) the unemployed days of the chronically unemployed,

(b) the unemployed days of the usually employed who become intermittently unemployed during the reference week and

(c) the unemployed days of those classified as employed according to the priority criterion of 'current weekly status'.

Hence, this estimate may be considered as the most inclusive rate of *unemployment*.

6.1 Unemployment Rates

- 6.1.1 *Unemployment rate* (UR) is defined as the number of persons unemployed per 1000 persons in the *labour force* (which includes both the employed and the unemployed). This, in effect, gives the unutilised portion of the labour force. Thus, it is a more refined indicator of the unemployment situation in a population than the *proportion unemployed* (PU), which is merely the number of the unemployed per thousand persons in the population as a whole.
- 6.1.1.1 It may be noted that the *unemployment rate*, as estimated from the surveys, happens to be very much lower in the population compared to the worker population ratio (WPR). Therefore, the estimates of *unemployment rate* obtained from the surveys are subject to higher margin of sampling fluctuations than that of the WPRs. One may use the estimates of *unemployment rate* cautiously in interpreting them, particularly at the state and union territory level.

Statement 6.1: Unemployment rates (per 1000 persons in the *labour force*) according to usual status, current weekly status (cws) and current daily status (cds) during 2004 - 2005

all-India

status	unemployment rate								
		rural			urban				
	male	female	person	male	female	person

	(42)	(21)	(32)	(42)	(18)	(30)			

Note: Figures within bracket indicate the proportion of unemployed per 1000 persons.

- 6.1.2 *Unemployment rates during 2004-2005*: Statement 6.1 presents the unemployment rates (UR) as obtained from the present survey according to the three approaches. The corresponding values of proportion unemployed (PU) in the population are given in parentheses. Some of the important points emerging from this statement are:
 - (i) the overall unemployment rates are not high;
 - (ii) the urban rates are higher than the rural rates;
 - (iii) the unemployment rates for females are higher than those for males, and highest among urban females;

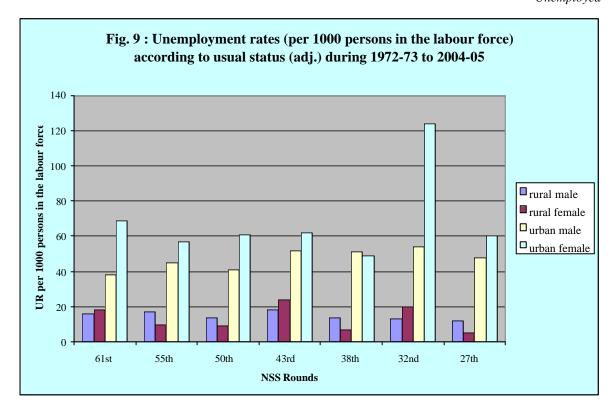

(iv) the unemployment rates according to the current daily status (cds) approach are higher than the rates obtained according to 'usual status' approach and 'weekly status' approach, thereby indicating a high degree of intermittent unemployment. This is mainly due to the absence of regular employment for many workers;

(v) the unemployment rate, measured through the usual status (ps) or measured through the usual status (ps +ss) (or us (adjusted)), is very low in the rural areas.

Statement 6.2: Unemployment rates (per 1000 persons in the *labour force*) according to usual status, current weekly status (cws) and current daily status (cds) during 1972-73 to 2004-05

6.1.3 *Unemployment rates over NSS surveys*: Statement 6.2 gives the unemployment rates as obtained from the seven quinquennial surveys of NSSO. In Figure 9, the unemployment rates according to usual status (adjusted) for the seven quinquennial rounds presented. It may be recalled that for the 27th round survey only the usual status (adjusted) figures are available. The statement shows that compared to 1999-2000, during 2004-05, the *unemployment rate* in terms of the usual principal status, remained almost the same in rural or urban areas for males, but increased around 2 percentage points for females. During this period, the *unemployment rate* in terms of the usual status (ps+ss), remained almost the same for rural males and decreased by 1 percentage point for urban males, but increased by about 1 percentage point for females in both rural and urban areas. No significant change in these rates in terms of cws is noticeable between the earlier rounds and the present one, except for urban females for which the rate had increased by about 2 percentage point compared to that obtained during 1999-2000. In terms of cds, the rate was higher in 2004-05 by about 2 percentage points for females in both the rural and urban areas than that obtained in 1999-2000. However, over the years - from 1977-78 to 2004-05 - there is no definite pattern for these rates.

6.1.4 State level variations: Statements 6.2.1 to 6.2.3, present the unemployment rates (UR) during 2004-05 for various states and union territories following the three different approaches stated earlier. While Statement 6.2.1 presents UR based on usual status (ps) and usual status (ps+ss), Statements 6.2.2 and 6.2.3 present estimates obtained following cws and cds approaches, respectively.

6.1.4.1 *URs based on us (adjusted)*: To measure chronic unemployment, the usually unemployed excluding those employed in a subsidiary status (i.e. the usual status adjusted) may be considered. Rates computed after making such adjustment would, in general, be expected to be smaller in magnitude than the corresponding rates according to the usual status (principal). The usual status rates may consist of persons who had reported unemployment for a relatively longer time during the reference period of one year, and it is possible that some of them had some marginal employment for some short period of time, which is not less than 30 days. One would, therefore, like to examine the *unemployment rates* obtained according to usual status taking into consideration of both principal and subsidiary statuses, that is, rate according to *us* (*adjusted*). From the figures presented in Statement 6.2.1 it is seen that there is a large variation in the *unemployment rates* across the states and union territories, across the rural-urban sector and gender. During 2004-05, in general, the rates are found to be much higher in urban areas than in rural areas, and higher for females than that for males in the cases where the over all *unemployment rates* are considerably high. Moreover, states reporting high rates for males reported high rates for females.

6.1.4.2 Rural males: Statement 6.2.1 shows that there is a large variation in the unemployment rates according to us (adjusted) for rural males across the states and union territories. It may be noted that the results for the smaller states and union territories are based on a

comparatively smaller sample size. Among the major states, Kerala reported the highest unemployment rate (5.1 per cent) followed by Punjab (3.3 per cent), Orissa (3.1 per cent), Haryana and Tamil Nadu (2.8 per cent each). The rate was lowest in Karnataka, Uttar Pradesh and Madhya Pradesh (0.7 per cent each) succeeded by Gujarat and Chhattisgarh (0.8 per cent each).

- 6.1.4.3 *Rural females:* For many major states, the rates are much lower compared to rural males, the exceptions being Assam, Himachal Pradesh, Karnataka, Kerala, Orissa, Punjab and West Bengal. Among the major states, only Kerala reported rates exceeding 10 per cent. Orissa (8.3 per cent and Punjab (4.9 per cent) also reported high rates as compared to the other major states.
- 6.1.4.4 *Urban males:* During 2004-05, the usually unemployed constituted nearly 4 per cent of the urban male labour force. Among the major states, during 2004-05, Orissa, Jharkhand, Assam, Bihar and Kerala reported more than 6 per cent of their urban male labour force unemployed for a major part of the year. The unemployment was very low for Himachal Pradesh (1.7 per cent), Karnataka (1.9 per cent) and Gujarat (2.3 per cent).
- 6.1.4.5 *Urban females:* Among the major states, the *unemployment rate* for females is found to be more than 10 per cent in the states of Kerala (33.4 per cent), Orissa (26.6 per cent), Punjab (14.0 per cent), Jammu & Kashmir (10.9 per cent), Uttaranchal (10.2 per cent) and Himachal Pradesh (10.1 per cent).
- 6.1.4.6 As seen from Statement 6.2.1, the regional pattern of unemployment rates based on usual status (ps) is broadly similar to that of usual status (ps+ss).
- 6.1.4.7 The unemployment rates obtained using the current weekly status would, in general, be lower than those obtained using the current daily status (see Statement 6.2.3). These weekly status rates have been presented in Statement 6.2.2.
- 6.1.4.8 The daily status concept incorporates the changes in the activity statuses of persons by taking into account the half-days data during the seven days of the reference week. The estimates based on the daily status, therefore, measure the extent of unemployment in terms of person-days rather than unemployed persons. To an extent the unemployed days of persons who are usually employed are also taken into account in this case. In a situation where large-scale seasonal unemployment exists, the cds measure gives a better picture of the unemployment situation than the one relating to unemployed persons. The daily status estimates obtained from the present survey are presented in Statement 6.2.3. It is seen from the statement that among the major states, for rural males, Kerala reported the highest rate (21.1 per cent) followed by Tamil Nadu (15.3 per cent) and West Bengal (11.1 per cent). In these states, the rates for rural females are found to be very high too. Among the major states, the *unemployment rate* for urban males according to current daily status approach, were the highest in Kerala (17.4 per cent) followed by Orissa (11.9 per cent) and Bihar (10.2 per cent). For urban females, they were high in Kerala (42.3 per cent), Orissa (27.1 per cent) and Punjab (17.7 per cent).

6.2 Unemployment Rates of the Educated

- 6.2.1 Unemployment rates among certain specified categories like the educated, the youth etc. could be higher than the overall rates observed in the previous sub-section. As such, some of these rates, as obtained from the present survey, are looked into in some detail in this section for the *educated*, and, in the next section, for the *youth*.
- 6.2.2 As mentioned earlier, the *educated* are those persons who have attained an educational level of *secondary and above including those completed diploma/ certificate courses*. Normally, one can attain this educational level at the age of 15 years or above. Thus, the study among the *educated* is restricted to persons of age 15 years and above. In Statement 6.3, the unemployment rates based on various approaches are given for different educational attainments at the all-India level for the present and for the last two quinquennial surveys.
- 6.2.3 The statement reveals the following broad regularities for the period 2004-05:
- (i) In both rural and urban areas, unemployment rate among the *educated* was higher than that among those whose education level was lower than *secondary*.
- (ii) In both rural and urban areas, among the *educated*, the rate was much higher for females than for males. This disparity was even more prominent among those whose educational level was *higher secondary* or *graduate and above*.
- 6.2.4 Comparison with rates of 1993-94 and 1999-2000: It is seen from Statement 6.3 that compared to 1993-94, these rates for 1999-2000 among the *educated* have declined. The decline was more for the females than for the males. For urban males, the rates remained almost stable. On the other hand, between 1999-2000 and 2004-05, the corresponding rates have increased for females, while they declined for rural males and remained stable for urban males. Figure 10 shows the unemployment rates for the persons of age 15 years and above for different levels of general education during 2004-05.
- 6.2.5 State level rates for the educated: The unemployment rates among the educated for different states and union territories are given in Statements 6.3.1 to 6.3.3. Statement 6.3.1 is based on usual status (ps), Statement 6.3.2 on us (adjusted) and Statement 6.3.3 on cws. It may be noted that the estimates given for the smaller states and union territories may not be reliable enough due to small sample size.
- 6.2.6 No consistent pattern emerges from the statements in the rural or urban areas of the states. The unemployment rates among the *educated* in the different major states are found to follow broadly the all-India pattern. Barring a few major states, the rates are much higher for the females.
- 6.2.6.1 *URs based on* usual status (ps): It is seen from Statement 6.3.1 that in rural areas among the major states, the rate was the highest in Kerala (29.6 per cent) followed by Orissa (19.4 per cent) and Assam (16.4 per cent). In other words, according to the usual principal status, about 30 per cent of the educated labour force in rural Kerala remained unemployed. In urban areas too, these states maintained their relative positions. The unemployment rates for educated females were also very high in these states. In general, states reporting high

Summary of Findings

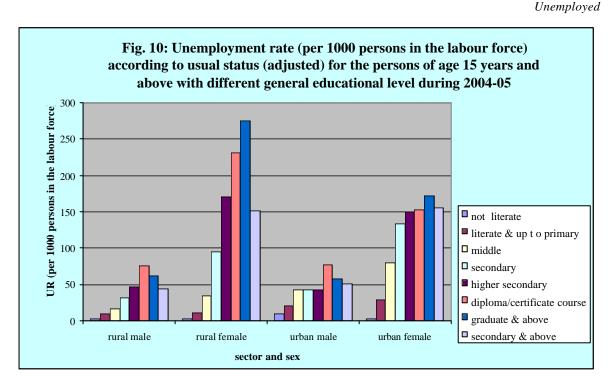

unemployment rates for the educated also reported high unemployment rates for the educated females.

Chapter Six Unemployed

6.2.6.2 It is seen from Statements 6.3.2 and 6.3.3 that, broadly speaking, the pattern observed for URs based on usual status (ps) also holds true for URs based on us (adjusted) or on cws.

Statement 6.3: Unemployment rate (per 1000 persons in the *labour force*) for the persons of age 15 years and above with different educational attainments during 1993-94, 1999-2000 and 2004-2005 all-India

6.3 Unemployment Rates of the Youth

6.3.1 In India, persons aged 15-29 years, who were considered as the *youth*, accounted for 25 to 29 per cent of the total population (refer Statement 3.10 of Chapter Three). A substantial chunk of them attain some level of education and enter into the labour market while they are in the age group of 15-29 years. In a labour surplus econo my like that of India, many of them remain unemployed and continue to search for or be available for employment. Some may be *chronically unemployed* - remaining unemployed for a longer period of the year. Some others, though usually employed, become intermittently unemployed during some weeks or days of the year due to seasonal fluctuations in the labour market. Statement 6.4 gives the unemployment rates (per 1000) among the *youth* for each sex at the all-India level. In Figure 11, the unemployment rates according to usual status (adjusted) among the youth (age 15-29 years) are presented for different age groups during 1994-95.

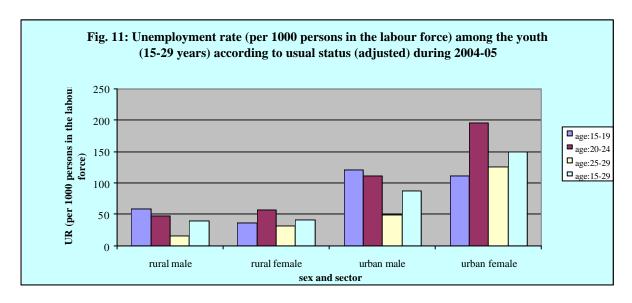

6.3.2 It is seen that the unemployment rate was much higher among the youth as compared to that in the overall population (given in Statement 6.1). Secondly, the rate was higher for the urban youth than that for the rural youth. Further, compared to the female youth, the unemployment rate for the male youth was lower in general but substantially lower in urban India.

6.3.3 Change over 1993-94 to 2004-05: Following any approach, comparing the period 1993-94 and 1999-2000, the unemployment rates among the youth have increased for males in rural or urban areas as well as for females in rural areas. During 1999-2000 and 2004-05, the unemployment rates among the youth have increased for females in both rural and urban areas. During this period, the rate appears to have remained at the same level for male youth in rural areas and decreased by about 1 percentage point for male youth in urban areas.

Statement 6.4: Unemployment rate (per 1000 persons in the *labour force*) among the youth (15 –29 years) according to usual status, current weekly status (cws) and current daily status (cds) during 1993-94, 1999-2000 and 2004-2005

6.3.4 Unemployment rates of youth in states: The corresponding rates for different states and union territories are given in Statements 6.4.1 to 6.4.4. It may be noted that the rates given for smaller states and union territories may not be reliable due to small sample size for the unemployed in those states and union territories. In most of the major states, the all-India features noted earlier are generally observed. Among the major states, the youth unemployment rate in the rural areas was high in Kerala, Orissa, Punjab and Assam by any of the three approaches. In the urban areas, unemployment rate for youths was high in Kerala, Orissa, Assam, Jharkhand and Bihar – regardless of the approach used to measure it.

6.3.5 Unemployment Rates of the youth and educational level: It may be important to see how

Statement 6.5: Education-level specific usual status (ps+ss) unemployment rate (per 1000 persons in the *labour force*) for persons of age 15-29 years and 15-59 years during 2004-2005

the unemployment rates among the youth are related with their educational level and are different from that of the active population. Statement 6.5 presents the unemployment rates according to usual status (ps+ss) for the youth (15-29 years) as well as for persons of age 15-59 (the years active population). The general feature that the unemployment rate increases with the level of education is observed all categories of persons indicating that the job seekers become gradually more and more choosers as their educational level increases. It is lowest among the illiterate and highest among educated – whether they are among the youth or

among the general population, or whether they are males or females or be they from rural or urban areas. However, for every educational level, the rates are higher among the youths than those among persons of age 15-59 years. Among educated youths, the *unemployment rate* was higher for females than males. The unemployment rates were 26.7 per cent and 20.8 per cent for females in rural and urban areas whereas the rates for males in rural and urban areas were 13.3 per cent and 9.1 per cent, respectively.

6.4 Unemployed on All Seven Days of the Reference Week

6.4.1 This section deals with persons aged 15-59 years who were unemployed on all 7 days of the reference week. In the following paragraphs, different features of such persons, henceforth referred to as 'unemployed' in brief, are discussed.

6.4.2 Unemployed Who Were Ever Employed

6.4.2.1 For the purpose of survey, among those who were unemployed on all the seven days of the reference week but had more or less regular work at least for some time in the past were considered as *ever employed*. The information on whether an unemployed was *ever employed* or not was collected to differentiate the *ever employed* from the first-time work seekers. The proportion of unemployed who were *ever employed* per 1000 unemployed as estimated from the NSS 61st round is given for each broad age-group and educational level with male-female and rural-urban break-up in Statement 6.6. Obviously, 1000 minus these proportions will be the estimated proportion of new entrants into the labour market among the unemployed.

6.4.2.2 It is seen from Statement 6.6 that the proportion of those who were ever employed

Statement 6.6: Number of unemployed (15-59 yrs.) who ever worked per 1000 unemployed (15-59 yrs.) separately by broad age-group and general educational level

all-India

				all-India		
age group /	ru	ral	u	urban		
general education level	male	female	male	female		
(1)	(2)	(3)	(4)	(5)		
age group:

30-44	852	740	642	423		
45-59	948	899	822	888		
gen. education level:						
not literate	844	890	698	853		
literate but below primary	698	702	546	556		
Primary, middle and secondary	541	322	427	242		
Higher secondary & above	236	190	261	204		
all (15 –59 yrs.)	561	530	384	278		

Note: unemployed means those persons unemployed on all the 7 days of the week

increases with age but decreases with the level of education. A reverse relationship therefore hold for the new entrants into the job market. Among the moderately educated (i.e., educational level higher secondary above) unemployed, in rural areas, 76 per cent among males and 81 per among females sought employment for the first time. In urban areas, these proportions were 74 per cent among males and 80 per cent among females.

corresponding proportions among the *not literate* unemployed were 16 per cent (males) and 11 per cent (females) in rural areas and 30 per cent (males) and 15 per cent (females) in urban areas. Among the different age-groups, the proportion of the new entrants was the highest in the age-group 15-29 years — and within this age-group, the proportion was highest among urban females. Overall, the proportion of new entrants among the unemployed was higher in urban areas than that in rural areas.

6.4.3 *Status of last employment*: The distribution of the unemployed who had worked for some time in the past by their status in their last employment is shown in Statement 6.7. Among them, in rural areas, as high as 66 per cent (among males) and 76 per cent (among

females) were engaged as *casual labour* in the past, while in urban areas, about 31 to 36 per cent – for males and females respectively – were *casual labour*. A significant proportion of

casual labour	658	758	358	312
total	1000	1000	1000	1000

Statement 6.8: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by broad industry division in their last employment

				all-India
broad industry	rura	ıl		urban
(division)	male	female	male	female
(1)	(2)	(3)	(4)	(5)
primary sector (01-05)	579	767	44	197
secondary sector (10-45)	256	121	445	316
tertiary sector (50-99)	135	95	484	485
industry divisions 10-99	391	215	930	801
01-99 (including n.r.)	1000	1000	1000	1000

the urban unemployed – 44 per cent for males and 53 per cent for females – who had worked for some time in the past had been regular wage/salaried workers. In rural areas, the corresponding proportions were very low – just 8 per cent for both males and females.

of6.4.4 Industry last The *employment*: distribution of unemployed who were ever employed industry of employment is given in Statement 6.8. In the rural areas, a majority of them worked in the agriculture sector and in the urban areas. they had worked mostly in the non-

agriculture sector. The pattern over the industries was same for the males and females.

Statement 6.9: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by occupation division in their last employment

				all-India
occupation	ru	ıral	ι	ırban
division	male	female	male	female
(1)	(2)	(3)	(4)	(5)
0 & 1	17	52	74	251

7, 8 & 9	300	109	513	265
all (incl. n.r.)	1000	1000	1000	1000

6.4.5 Occupation of last employment: The distribution of unemployed who were ever employed by their occupation division in their last employment is given in Statement The National Classification of Occupation (NCO) 1968 was used in this survey. It is seen from the statement that in rural areas, for both males and females, the ever employed reported their last occupation most frequently as farmers, fishermen, hunters, loggers and related workers (Occupation Division 6) - 59 per cent among males and 78 per cent among females. A small proportion – 5 per cent among females and 2 per cent among males - among such rural ever employed

reported their last occupation as *professional, technical and related workers* (Occupation Divisions 0 & 1). In urban areas, the pattern was different. Among urban *ever employed* males, as many as 51 per cent reported their last occupation as *production and related*

workers, transport equipment operators and labourers (Divisions 7, 8 & 9) while 7 per cent and 15 per cent respectively reported as professional, technical and related workers (Divisions 0 and 1) and sales workers (Division 4). For urban ever employed females, the occupation in their last employment was relatively more evenly distributed over the various Occupation Divisions – about 25 per cent in Divisions 0 and 1, 20 per cent in Division 6, 27 per cent in Divisions 7, 8 & 9 and 12 per cent in Division 3 (clerical and related workers).

6.4.6 Reason for becoming unemployed for those who had work in the past: The information on reason for becoming unemployed was collected for those who were employed in the past.

Statement 6.10: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked by reason for break in employment

				all-India		
reason for break in	rur	al	urban			
employment	male	female	male	female		
(1)	(2)	(3)	(4)	(5)		
loss of earlier job	35	13	121	34		
quit earlier job	43	54	160	232		
lay-off without pay	9	2	17	29		
unit closed	27	8	90	52		
lack of work in the enterprise	189	116	149	114		
lack of work in the area	519	676	239	241		
others	173	132	223	298		
all (including n.r.)	1000	1000	1000	1000		

The results are given in Statement 6.10. Among them, in rural areas, about 52 per cent among males and 68 per cent among females became unemployed due to lack of work in the area. In urban areas, these proportions were 24 per cent for both males and females. About 16 per cent of the male and 23 per cent of the female unemployed in urban areas had quit earlier job. Layoff, closure of the unit or

loss of earlier job were reported as the reason for unemployment by about 23 per cent of the urban male unemployed and 11 per cent of urban female unemployed. Among other specified reasons, lack of work in the enterprise was reported by a considerable proportion of the unemployed – 19 per cent among males and 12 per cent among females in rural areas, and 15 per cent among males and 11 per cent among females in urban areas.

6.4.7 Reason for quitting the earlier job: Information was collected about the reasons for quitting the earlier job from those who had become unemployed as they had to quit earlier

Statement 6.11: Per 1000 distribution of unemployed (15 to 59 yrs.) who ever worked and quit the job by reason for quitting the last job

				all-India	
reason for quitting last job	ru	ral	urban		
_	male	female	male	female	
(1)	(2)	(3)	(4)	(5)	
work not remunerative enough	513	194	476	237	
unpleasant environment	41	40	92	49	
employer harsh	155	1	160	40	
health hazard	119	34	59	58

others	168	731	168	614	
all (including n.r.)	1000	1000	1000	1000	

job. The results thus obtained are given in Statement 6.11 for all-India. It is observed that of the various specified reasons for quitting the earlier job, work being remunerative enough was reported bv a the majority of unemployed, particularly by males – 51 per cent

among males and 19 per cent among females in rural areas and 48 per cent among males and 24 per cent among females in urban areas. In the rural areas, *unpleasant environment* was reported by about 4 per cent of the unemployed who ever worked but quit the job. The corresponding figures for males and females in the urban areas were 9 per cent and 5 per cent. About 16 per cent and 6 per cent of male unemployed had to quit the earlier job due to *employer being harsh* and *health hazards* respectively. The corresponding proportion was only 4 per cent for female unemployed in the urban areas. Note that for about 73 per cent and 61 per cent of the female unemployed in the rural and urban areas, respectively, the reason for quitting the earlier job was recorded as 'others' in the survey. This means that a large majority of female unemployed had to quit the earlier job for reason(s) other than the specified ones.

Chapter Seven

Underemployment

7.0 General

7.0.1 Underemployment is commonly defined as the under-utilisation of labour time of the workers. Some of the persons categorised as usually employed, do not have work throughout the year due to seasonality in work or otherwise and their labour time is not fully utilised - they are, therefore, underemployed. Their underemployment is termed *visible underemployment* if they report themselves to be not working with respect to a shorter reference period. The NSS measures the *visible* underemployment by cross classifying persons by (a) their usual and current weekly statuses (b) their usual and current daily statuses and (c) their current weekly and current daily statuses.

7.0.2 Some employed persons, particularly the *self-employed*, may appear to work throughout the year. But the work they are pursuing may not fully meet their needs in terms of generating sufficient income, giving fulfilment to them, etc. They may, therefore, want additional and/or alternative work. Such underemployment is termed as *invisible underemployment* and therefore, not directly measurable. The NSS calculates the indicators of *invisible underemployment* through a set of probing questions addressed to those categorised as usually employed on their availability for additional/alternative work and reason for seeking such additional/alternative work, status of their present engagement (i.e. whether worked more or less regularly), etc. The proportion of the usually employed who indicate their availability for additional/alternative work, gives, by and large, an overall share of the employed who did not have enough work, or at least felt the need for additional/alternative work, and, in that sense, were underemployed.

7.1 Underemployment Among the Usually Employed

- 7.1.1 As mentioned earlier, some persons categorised as usually employed might not have work throughout the year. They might remain without work during some weeks of the year or go without work on some days of the different weeks of the year. The first dimension is brought out by the distribution of the usually employed by their current weekly status. Statement 7.1 gives the relevant all-India results for 'all' usually employed persons (i.e., usually employed according to usual status (ps+ss)) for NSS 61st round (2004-05). Corresponding results based on the NSS 50th (1993-94) and 55th (1999-2000) rounds are also presented in the statement.
- 7.1.2 It is seen from Statement 7.1 that the *underemployment rate* defined as the proportion of usually employed who were found to be *not* employed (i.e. reporting either unemployed or not in labour force) during the week preceding the date of survey, had been stable for males between 1993-94 and 2004-05. The underemployment rate for rural females decreased by

about 1 percentage point in 1999-2000 compared to 1993-94 and remained stable in the most rounds. Among urban females, the underemployment rate decreased by about 2 percentage point during 1993-94 to 1999-2000 and decreased further by about 1 percentage point during 1999-2000 to 2004-05. Secondly, this problem of underemployment is seen to be more serious among usually employed females than among employed males, and more in rural than in urban areas. During 2004-05, the underemployment among usually employed females was 17 per cent in rural India and nearly 9 per cent in urban India. The corresponding percentages for usually employed males were 4 and 2 only. Most of the usually employed females who were currently not working had withdrawn themselves from the labour force and did not report themselves as currently unemployed. The distributions for the different states and union territories obtained from the present survey are given in Statement 7.1.1.

Statement 7.1: Per 1000 distribution of usually employed (principal and subsidiary status taken together) by their broad current weekly status during 1993-94, 1999-2000 and 2004-2005

7.1.3 The activity pattern of the usually employed during different days within the reference week is indicated by the distribution of their days by current daily status. The relevant results for rural and urban India are presented in Statement 7.2. It is observed that the proportion of

person-days of the usually employed utilised for work was quite low for females compared to males in all the three rounds. During 2004-05, this proportion was estimated at about 66 percent and 80 per cent for females in rural and urban India respectively as against 89 and 95 per cent for males in rural and urban India respectively. Once again, it is observed that when work is not available, a large proportion of females withdrew from the labour force rather than they report themselves as unemployed. The distributions obtained from the present survey for different states and union territories are presented in Statement 7.2.1.

7.2 Underemployment of Persons Categorised as Working According to Current Weekly Status

7.2.1 As mentioned earlier in Chapter Five, some persons classified as working during a week might not have had work for the entire week. The distribution of persons working according to current weekly status by their current daily status, therefore, would indicate the proportion of person-days on which they had remained without work. These results are presented in Statement 7.3 for 2004-05, 1999-2000, and 1993-94.

Statement 7.3: Per 1000 distribution of person-days of current weekly status employed persons by their broad current daily status during 1993-94, 1999-2000 and 2004-2005

all-India

7.2.2 In 2004-05, the percentage of person-days on which persons with some work during the reference week (according to weekly status) were without work was estimated at about 7 for rural males, 21 for rural females, 3 for urban males and 13 for urban females. In the last three rounds, in rural areas, the proportion of unemployed days went up for both males and females. This increase is evident in the case of urban males too. For urban females, the proportion, however, had been somewhat static during this period. However, both in the rural and urban areas when there was no work, a higher proportion of females as compared to males withdrew from the labour force. The state-specific data on the distribution of person days of persons with some work during a week by their broad daily activity status are presented in Statement 7.3.1.

7.3 Invisible Underemployment – Some Indicators

7.3.1 In the present survey, the usually employed were asked "whether they worked more or less regularly throughout the year". Among them, those who did not work more or less regularly would give an indication of the extent of underemployment.

Statement 7.4: Number of employed persons according to principal status of age 15 years and above who did not work more or less regularly throughout the year per 1000 employed persons in the usual principal status

				all-India
broad usual		rural		urban
principal status	male	female	male	female
(1)	(2)	(3)	(4)	(5)
self-employed in:				
agriculture	79	88	53	99
non-agriculture	51	61	45	68
regular wage/salaried in:				
agriculture	43	46	85	280
non-agriculture	31	31	30	38
casual labour in:				
agriculture	200	237	294	311
non-agriculture	191	198	189	201
all	110	139	62	89

7.3.2 Statement 7.4 presents the number of usually employed of age 15 years and above who did not work more or less regularly throughout the year per 1000 employed by usual principal status at the all-India level. It is observed from the statement that this proportion was higher among females than among males. Further, among the various categories of the employed, the proportion was the highest for casual labourers. As high as 24 and 31 per cent of female casual labourers engaged in

the agriculture sector, in rural and urban India respectively, did not work regularly throughout the year. In the non-agriculture sector, the corresponding proportions were 20 per cent each. On the other hand, the proportion was the lowest among the *regular wage/salaried employees* - specially for those engaged in non-agriculture sector where the proportion ranged from 30 to 38 per 1000 employed. It may be noted that in the agricultural sector, the survey could capture only 46 sample females who were regular wage/salaried, and who did not work more or less regularly throughout the year, in the urban areas. This may, perhaps, be the reason why the proportion of regular wage/salaried females who did not work more or less regularly throughout the year is found to unusually high (28 per cent) in the urban sector. The estimates obtained from the present survey for different states and union territories are given in Statement 7.4.1.

7.3.3 The usually employed were asked 'whether they sought or were available for (i) additional work and (ii) alternative work'. The proportions of usually employed who reported themselves as available for additional work or alternative work give an idea about under-utilisation of available labour time and therefore, could serve as two indicators of underemployment.

7.3.4 Underemployed - seeking or available for additional work: Statement 7.5 gives the number of persons who sought or were available for additional work per 1000 usually (ps) employed persons of age 15 years and above and their distribution by reason for seeking or being available for additional work. The statement shows that, during 2004-05, in the stated age-group, about 11 per cent of usually employed rural males and 6 per cent of usually employed urban males had reported seeking or being available for additional work. The corresponding percentages were around 7 among the females in both the rural and urban areas. The main reported reason for seeking or being available for additional work was to supplement income – it being reported by more than half of them. Lack of enough work was reported by 17 to 26 per cent of underemployed. Thus, as per survey results, for about 73 to 79 per cent of underemployment, either of these two factors, viz., a need to supplement income or lack of enough work, had led to their seeking or being available for additional work. The proportion of 'underemployed' for different states and union territories is given in Statement 7.5.1.

Statement 7.5: Number of usually working persons of age 15 years & above, who sought or were available for additional work per 1000 usually employed persons in the principal status (15 years & above) and their per 1000 distribution by reason for seeking or availability for additional work

all-India category no. per 1000 per 1000 distribution of workers who sought or were available for additional work by reason of workers who sought or were persons to not not enough others total available for supplement work and to enough additional income supplement work work income (1) (2) (3) (4) (5) (6) (7) rural male 107 555 206 183 27 1000 74 527 262 166 31 1000 rural female urban male 62 544 201 201 34 1000 urban female 65 560 166 225 32 1000

7.3.5 Underemployed - seeking or being available for alternative work: Statement 7.6 shows the usually (ps0 employed persons of age 15 years and above reporting themselves as having sought or being available for alternative work. During 2004-05, about 5 to 9 per cent of the usually employed persons of different categories had reported availability for alternative work. Among the usually employed reporting themselves as having sought or available for alternative work, 67 to 70 per cent in the rural areas and 63 to 74 per cent in the urban areas reported that their present work was not remunerative enough. Statement 7.6.1 gives the corresponding results obtained from the present survey for different states and union territories.

Statement 7.6: Number of persons who sought or were available for alternative work per 1000 usually employed persons in the principal status (15 years above) and their per 1000 distribution by reason for seeking or availability for alternative work

Chapter Eight

Labour Mobility

8.0 General

8.0.1 Over a period of time, various features related to the employment of a worker, such as his/her occupation, industry or status of work may undergo a change. To study such changes, information has been collected in this survey relating to change(s) in occupation, industry and work status or of 'establishment' that took place within a reference period of two years prior to the date of survey for the usually employed persons (according to principal status). In this chapter, the term usually employed refers to those persons who are employed according to the usual status (ps). The term 'establishment' was used in a broad sense and included all producing units covering household enterprises also. Discussion is made in the following sections on each of these aspects of labour mobility.

8.1 Change in Work Status or in Establishment

8.1.1 At first, we look at the estimates obtained from the present survey classified by change in work status or by change in establishment for each level of education of the person at the all-India level. The number of usually working persons of age 15 years & above, who had changed their status of work or changed establishment during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) at the all-India level is presented in Statement 8.1.

Statement 8.1: Number of usually (ps) working persons who had changed their status of work or changed establishment during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status for each level of education

					all-India						
changed work status /	not	literate	primary,	higher	all						
establishment	literate	and up to	middle and	secondary							
		primary	secondary	and above							
(1)	(2)	(3)	(4)	(5)	(6)						
		rural mal	le								
work status	4	6	8	13	7						
establishment	80	83	74	43	74						
		rural fema	ale								
work status	3	4	4	7	3						
establishment	88	101	83	49	87						
		urban ma	le								
work status	7	8	14	10	11						
establishment	96	82	70	37	65						
	urban female										
work status	3	4	7	6	5						
establishment	87	93	60	34	66						

8.1.2 The statement shows that during the two years preceding the interview hardly about 1 per cent of the usually employed had changed their work status while about 7 (urban males) to 9 (rural females) per cent had changed their establishment. The proportion changing their establishment was roughly the same for males and females in urban areas but higher for females in rural areas. Further, this proportion is much less among persons with education level higher secondary and above as compared to those with lower levels of education - be it in rural or urban areas. This was so for both males and females. The number of usually working persons of age 15 years & above, who had changed their status of work or changed establishment during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1. It may be noted that the estimates of proportions given in this statement are based on a very small sample reporting the changes and therefore, the results at the state and union territory level may he interpreted cautiously.

8.1.3 The distribution of usual workers of age 15 years & above changing their status of work by their last work status at the all-India level is presented in Statement 8.2. The statement reveals that among those who reported their present work status as *casual labour* were, in their last work status, more frequently *self-employed* than *regular* workers. This was seen in rural as well as in urban areas. However, among workers reporting their present work status as *self-employed*, proportion reporting their last status as *casual labour* was much higher in rural areas than that in urban areas, where the last status was more frequently reported as *regular wage earners*.

Statement 8.2: Number of usually working persons who had changed their status of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last work status

8.2 Change in Industry of Work

8.2.1 Statement 8.3 presents the distribution of usual principal workers aged 15 years and above who had changed their industry of work during the two preceding years by their last industry of work at the all-India level. For the purpose of study, the industry divisions (01 - 99) of NIC 1998 have been categorised as (i) *primary* sector (01 - 05), (ii) *secondary* sector (10 - 45) and (iii) *tertiary* sector (50 - 99). It is seen from Statement 8.3 that about 1 per cent of workers reported change in their industry of work. The number of usually working persons who had changed their industry of work during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1.

Statement 8.3: Number of usually working persons who had changed their industry of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last broad industry of work

50-99	16	152	393	432	825	1000	7	170	249	580	829	1000
10-99	16	195	386	394	781	1000	10	172	407	420	827	1000
all	16	189	385	397	782	1000	9	165	409	412	821	1000

8.2.2 Statement 8.3 also shows that among those reporting their present industry of work in the *primary* sector, more workers reported their last industry of work in the *secondary* sector excepting the urban males. Further, among those workers reporting presently employed in *secondary* sector of work, a larger proportion, in the rural areas, reported to have been employed in *primary* sector of work, whereas in the urban areas, they reported to have been employed in *secondary* or *tertiary* sector of work. Both these features are observed among the male and female workers. Moreover, in urban areas, among the male or female workers reporting their present industry of work in the *tertiary* sector, there were more who had their last industry of work in the *secondary* sector than in the *primary* sector. Compared to this, in

rural areas, among all such workers, male or female, who changed their industry of work, the situation was just the reverse, with more workers reporting their last industry of work in the *primary* sector than in the *secondary* sector.

8.3 Change in Occupation of Work

- 8.3.1 Statement 8.4 presents the distribution of usual workers aged 15 years and above who had changed their occupation of work during the two preceding years by the occupation in their last work at the all India level. As stated earlier, National Classification of Occupations (NCO), 1968 was used in recording the occupation codes. It is seen from Statement 8.4 that about 1 per cent of male workers and less than 1 per cent of female workers reported change in their occupation during the two years preceding the date of survey. The number of usually working persons of age 15 years & above, who had changed their occupation of work during the two years preceding the date of survey per 1000 usually employed persons in the principal status (15 years & above) for different states and union territories is presented in Statement 8.1.1.
- 8.3.2 Descriptions of the Occupation Divisions as per National Classification of Occupation (1968), used in statement 8.4 are as follows:
 - i) Division 0-1: Professional, Technical and related workers.
 - ii) Division 2: Administrative, Executive and Managerial workers,
 - iii) Division 3: Clerical and related workers,
 - iv) Division 4: Sales workers,
 - v) Division 5: Service workers,
 - vi) Division 6: Farmers, Fishermen, Hunters, Loggers and related workers,
 - vii) Division 7,8 and 9: Production and related workers, transport equipment operators and labourers.
- 8.3.3 Statement 8.4 also shows that generally, among workers reporting change in their occupation, relatively high proportions are noticeable for those reporting their last occupation as farmers, fishermen, hunters, loggers and related workers (Division 6), production and related workers, transport equipment operators and labourers (Divisions 7, 8 or 9) or as professional, technical and related workers (Division 0 or 1) in rural and urban areas.

Statement 8.4: Number of usually working persons who had changed their occupation of work during the two years preceding the survey per 1000 usually employed persons (15 years & above) in the principal status and the per 1000 distribution by their last broad occupation of work

8.4 Reasons for Change in Industry of Work and /or Occupation

8.4.1 The reason for change of the industry of work and/or occupation was ascertained from the usually employed who changed their industry of work and/or occupation. The relevant results based on this information are given in Statement 8.5. Of the female employed, who had changed their industry of work and/or occupation, about 31 per cent in rural areas and 25 per cent in urban areas did not report any of the specified reasons. Compared to females, among males, these proportions were lower - 30 per cent in rural areas 20 per cent in urban

areas. Among the specified reasons, for better income/ remuneration was found to be the most significant reason – it being reported by 32 and 48 per cent of the employed males and by 35 and 57 per cent of the employed females who had changed their industry of work and /or occupation in the rural and urban areas, respectively. Loss of earlier job (due to retrenchment or closure of unit) had been also an important reason for change of the industry of work and/or occupation – the reason being reported by 12 to 15 per cent of employed males and 7 per cent of employed females who had changed their industry of work and /or occupation.

Statement 8.5: Per 1000 distribution of usual principal status workers of age 15 years and above who had changed industry or occupation during last 2 years by reason for such change of job for each broad education

	01	Agriculture, hunting and related service activities
	012	Farming of animals
	014	Agricultural and animal husbandry service activities, except veterinary activities. [This class includes specialized activities, on a fee or contract basis mostly performed on the form.]
	015	basis, mostly performed on the farm.] Hunting, trapping and game propagation including related service activities
	02	Forestry, logging and related service activities
В		FISHING
	05	Fishing, operation of fish hatcheries and fish farms; service activities incidental to fishing
C		MINING AND QUARRYING
	10	Mining of coal and lignite; extraction of peat
	11	Extraction of crude petroleum and natural gas; service activities incidental to oil and gas extraction, excluding surveying
	12	Mining of uranium and thorium ores
	13	Mining of metal ores
	14	Other mining and quarrying
D		MANUFACTURING
	15	Manufacture of food products and beverages
	16	Manufacture of tobacco products
	17	Manufacture of textiles
	18	Manufacture of wearing apparel; dressing and dyeing of fur

19	Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear
20	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plating materials
21	Manufacture of paper and paper products
22	Publishing, printing and reproduction of recorded media
23	Manufacture of coke, refined petroleum products and nuclear fuel
24	Manufacture of chemicals and chemical products
25	Manufacture of rubber and plastics products
26	Manufacture of other non-metallic mineral products
27	Manufacture of basic metals
28	Manufacture of fabricated metal products, except machinery and equipment
29	Manufacture of machinery and equipment n.e.c.*
30	Manufacture of office, accounting and computing machinery
31	Manufacture of electric al machinery and apparatus n.e.c.
32	Manufacture of radio, television and communication equipment and apparatus
33	Manufacture of medical, precision and optical instruments, watches and clocks
34	Manufacture of motor vehicles, trailers and semi-trailers
35	Manufacture of other transport equipmenmt
36	Manufacture of furniture; manufacturing n.e.c.
37	Recycling
* n.e.c. = not elsewh	ere classified
	ELECTRICITY, GAS AND WATER SUPPLY
40	Electricity, gas, steam and hot water supply
41	Collection, purification and distribution of water
	CONSTRUCTION
45	Construction

Е

F

G		WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES, MOTORCYCLES AND PERSONAL AND HOUSEHOLD GOODS
	50	Sale, maintenance and repair of motor vehicles and motorcycles; retail sale of automotive fuel
	51	Wholesale trade and commission trade, except of motor vehicles and motorcycles
	52	Retail trade, except of motor vehicles and motorcycles; repair of personal and household goods
Н		HOTELS AND RESTAURANTS
	55	Hotels and restaurants
I		TRANSPORT, STORAGE AND COMMUNICATIONS
	60	Land transport; transport via pipelines
	61	Water transport
	62	Air transport
	63	Supporting and auxiliary transport activities; activities of travel agencies
	64	Post and telecommunications
J		FINANCIAL INTERMEDIATION
	65	Financial intermediation, except insurance and pension funding
	66	Insurance and pension funding, except compulsory social security
	67	Activities auxiliary to financial intermediation
K		REAL ESTATE, RENTING AND BUSINESS ACTIVITIES
	70	Real estate activities
	71	Renting of machinery and equipment without operator and of personal and household goods
	72	Computer and related activities
	73	Research and development
	74	Other business activities
L		PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY
	75	Public administration and defence; compulsory social security
M		EDUCATION

	80	Education
N		HEALTH AND SOCIAL WORK
	85	Health and social work
0		OTHER COMMUNITY, SOCIAL AND PERSONAL SERVICE ACTIVITIES
	90	Sewage and refuse disposal, sanitation and similar activities
	91	Activities of membership organizations n.e.c.
	92	Recreational, cultural and sporting activities
	93	Other service activities
P		PRIVATE HOUSEHOLD WITH EMPLOYED PERSONS
	95	Private households with employed persons
Q		EXTRA-TERRITORIAL ORGANISATIONS AND BODIES
	99	Extra-territorial organisations and bodies

Appendix A
