## **Situation Assessment Survey of Farmers**

### **Some Aspects of Farming**

**NSS 59<sup>th</sup> Round  
(January–December 2003)**

**National Sample Survey Organisation  
Ministry of Statistics and Programme Implementation  
Government of India**

**July 2005**

## Preface

India has a large agrarian economy with most of its rural population subsisting on farming. Over the decades since independence, Government has made concerted efforts to improve the lot of the farmers. As the country entered the new millennium, the Union Ministry of Agriculture desired that a comprehensive socio-economic study of the Indian farmers covering educational level, level of living, farming practices, possession of productive assets, awareness and access to modern technology, resource availability, indebtedness and a host of other relevant issues be studied through a special survey. Subsequently, the National Sample Survey Organisation (NSSO) took up the special study on Indian farmers and conducted the Situation Assessment Survey of Farmers during 2003 in the rural areas as part of the NSS 59<sup>th</sup> round.

Data for the survey were collected from 51770 households spread over 6638 villages from across the country in the Central Sample. A farmer for this survey was identified as a person who possessed some land and performed agricultural activities on any part of that land during the 365 days preceding the date of survey. A farmer household was termed as a household in which there was at least one farmer. Agricultural activities included cultivation of field and horticultural crops, growing of trees or plantations such as rubber, tea etc and animal husbandry, fishery, sericulture etc.

This report is the third in the series of five reports to be brought out on the basis of the data collected through the survey. It deals with farming practices; farmers' awareness of technical and institutional developments in the field of agriculture; availability of resources and their use; distribution of farmland and irrigated land by type of farming activity and energy use in activities such as ploughing, harvesting, threshing and irrigation.

Chapters One, Two and Three give respectively the introduction to the survey, details of the concepts and definitions used in the survey and the main findings of the survey. The detailed tables at the State/UT and All-India level are given in Appendix A, while the sample design and the estimation procedure are given in Appendix B. Facsimile of the schedule used for data collection is given in Appendix C.

All the technical work including development of sampling design, survey instruments and preparation of the report was undertaken by the Survey Design and Research Division of the NSSO. The fieldwork was handled by the Field Operations Division and the data processing and table generation by the Data Processing Division. The Coordination and Publication Division was responsible for the over-all coordination. The Chairman and Members of the Governing Council of NSSO along with the Chairman and Members of the Working Group set up for this round provided the technical directions and guidance at every stage of the survey. I am grateful to all of them. I am also thankful to the respondents who furnished information to the field staff. The report I hope will be useful to the planners, policy makers and researchers. Comments and suggestions are most welcome.

Dr. S Ray

July 2005

# Highlights

---

- An estimated 27% of farmers did not like farming because it was not profitable. In all, 40% felt that, given a choice, they would take up some other career.
- The break-up of members of farmer households by educational level was very similar to that of the entire rural population.
- Nearly 5% of farmer households had a member who belonged to a self-help group. Only 2% had a member who belonged to a registered farmers' organisation.
- About 18% of farmer households knew what bio-fertilisers were and 29% understood what minimum support price meant. Only 8% had heard of the World Trade Organisation.
- Only 4% of farmer households had ever insured their crops and 57% did not know that crops could be insured.
- About 29% of farmer households included a member of a cooperative society. Only 19% had availed themselves of services from a cooperative. Most of these households availed themselves of either credit facilities, or services related to seeds or fertilisers.
- Almost 48% of farmer households purchased their seeds and 47% used farm-saved seeds. Whereas 30% farmers replaced seed varieties every year, another 32% replaced them every alternate year.
- Fertilisers were used by 76% farmer households during the kharif and 54% during the rabi season. For 27% households, fertilisers were available within the village.
- Organic manure was used by 56% farmer households during the kharif and 38% during the rabi season. It was available within the village for 68% households during the kharif and 75% households during the rabi season.
- Improved seeds were used by 46% farmer households during the kharif and 34% during the rabi season. They were available within the village for 18% farmer households.
- Pesticides were used by 46% farmer households during kharif and 31% during rabi. Veterinary services were used by 30% during kharif and 22% during rabi. Only 1.5-2% of farmer households said facilities for testing of fertilisers or pesticides were available to them.
- Among the various agricultural activities covered in the survey, 96.2% of all land used for farming during the kharif and 95.1% during the rabi season was devoted to cultivation, including horticulture, sericulture and vermiculture. In case of leased-in land, 98.2% during the kharif and 97% during the rabi season was cultivated.
- The share of orchards and plantations in total farmed land was 3% during the kharif and 4% during the rabi season. In land farmed by Scheduled Caste households, the share of orchards and plantations was 1-2%.

- Farmer households possessing less than 0.01 hectares of land - who devoted only 14% of farmed land to cultivation - reported 69% of farmed land as used for dairying, compared to 0.35% for all farmer households taken together.
  - Almost 50% of all land irrigated during the kharif season and 60% during the rabi season was irrigated by tube-wells. Wells were used to irrigate 19% of land during kharif and 16% during rabi. Canals accounted for irrigation of 18% land during kharif and 14% during rabi.
  - An estimated 62% of net irrigated area during kharif and 69% during rabi was devoted to cultivation of cereal crops.
  - Gross irrigated area accounted for 42% of cropped area during the kharif and 56% during the rabi season.
  - About 79% of gross irrigated area during the kharif and 83% during the rabi season was irrigated without the use of any device. Around 5% was irrigated with the help of diesel pumps and 4% with electric pumps.
  - Of the farmer households using non-human energy for ploughing, about 47% used diesel tractors while 52% relied on animal power. Among those using non-human energy for harvesting, 59% used diesel-powered machines. Of those reporting non-human energy use for irrigation, 66% used diesel pumps and 33% used electric pumps.

## List of Detailed Tables

Table No.	Title	Page
1	Per 1000 numbers of farmer households having awareness of some aspects of farming	A-1
2	Per 1000 distribution of farmer households not insuring their crops by reason	A-2
3	Per 1000 number of farmer households not availing services from cooperatives and number availing, by type of service	A-3
4	Per 1000 distribution of farmer households by usual source of procuring seeds	A-4
5	Per 1000 distribution of farmer households by usual practice of seed replacement	A-5
6	Per 1000 number of farmer households having a member of (i) a registered farmers' organization and (ii) a self-help group	A-6
7	Per 1000 numbers of farmer households liking and not liking farming as a profession	A-7

<b>Table No.</b>	<b>Title</b>	<b>Page</b>
8	Per 1000 distribution of persons in farmer households aged 7 years and above by level of education	A-8 – A-13
9	Percentage distribution of farmed land possessed by type of agricultural activity for different categories of land possessed	A-14 – A-42
9-SG	Percentage distribution of farmed land possessed by type of agricultural activity for different social groups	A-43
9-SI	Percentage distribution of farmed land possessed by type of agricultural activity for farmer households with different sources of income	A-44
10	Percentage distribution of farmed land possessed by type of agricultural activity for each size class of land possessed	A-45 – A-73
10-SG	Percentage distribution of farmed land possessed by type of agricultural activity for each size class of land possessed and social group	A-74 – A-78
10-SI	Percentage distribution of farmed land possessed by type of agricultural activity for each size class of land possessed and source of income	A-79 – A-83
11	Percentage of area under irrigation during the agricultural year for different types of crops by source of irrigation	A-84 – A-109
12	Per 1000 distribution of farmer households by device used for irrigation, separately for each source of irrigation	A-110 – A-123
12A	Percentage of gross irrigated area irrigated by different devices	A-124 – A-125
13	Per 1000 distribution of farmer households by distance from some farming resources used for cultivation	A-126 – A-135
14	Number per 1000 of farmer households reporting use of different farming resources and their availability	A-136 – A-145
15	Number per 1000 of farmer households reporting use of different farming resources and their adequacy and quality	A-146 – A-154
16	Per 1000 distribution of farmer households reporting availability of testing facility for fertiliser and pesticide	A-155 – A-156
17	Per 1000 distribution of farmer households by primary source of energy for different activities	A-157 – A-166
18	Per 1000 distribution of farmer households in different size classes of land possessed by primary source of energy used for specific activities	A-167 – A-195

# Chapter One

## Introduction

**1.0** With the turn of the century and the millennium, the Union Ministry of Agriculture decided that a comprehensive assessment of the situation of farmers in the country was necessary. The areas of interest included the educational level of farmer households, level of living as measured by consumer expenditure, income and productive assets, and indebtedness; their farming practices and preferences, resource availability, and their awareness of technological developments and access to modern technology. Accordingly, the Situation Assessment Survey of Farmers (SAS) was conducted in 2003 by the National Sample Survey Organisation (NSSO) in the Ministry of Statistics & Programme Implementation to meet these requirements.

**1.1** The survey was restricted to farmer households in rural India and, like all normal NSS surveys, covered practically the entire geographical area of the country. In all 51770 households spread over 6638 villages (*panchayat* wards in Kerala) were surveyed (see Table A at page 2). The reference period of survey was the agricultural year July 2002 to June 2003. Two visits were made to each sample household so that data for both kharif and rabi seasons could be collected with a minimum of recall error.

**1.2** A farmer was understood as a person who possessed some land and was engaged in agricultural activities on any part of that land during the 365 days preceding the date of survey. A farmer household was defined as one which had at least one farmer. Agricultural activity was taken to include cultivation of field and horticultural crops, growing of trees or plants such as rubber, cashew, coconut, pepper, coffee, tea, etc; animal husbandry, fishery, bee-keeping, vermiculture, sericulture, etc.

**1.3** The present report is the third of a series of five reports to be brought out on the basis of the survey. The first two reports dealt with Indebtedness of Farmer Households; and Access to Modern Technology for Farming. The other two reports will be on: Household Consumption Expenditure for Farmers; and Income, Expenditure and Productive Assets of Farmer Households. The present report covers farming practices, farmers' awareness of technical and institutional developments in farming, resource availability and use, distribution of farmed area and irrigated area over different kinds of farming activity, and energy used by farmer households in various activities, with special reference to ploughing, threshing, harvesting and irrigation.

**1.4** Detailed estimates at State level are presented in Appendix A of the report. The sample design and estimation procedure are explained at length in Appendix B. A facsimile of Schedule 33 - the main schedule of enquiry - is included as Appendix C. Concepts and definitions followed in the survey are set out in the next chapter and the results presented in brief in Chapter Three: Summary of Findings.

**1.5** Since estimates based on very small samples may not be reliable, it was decided to release State-level estimates if the total number of sample farmer households for the State was at least 300. As a consequence, separate figures for the States of Delhi and Goa could not be brought out. From similar considerations figures for all the UT's have been clubbed and shown under the head "Group of UT's". It may be noted that data from all the States and UT's have been used in building up all-India estimates.

Table A shows, State/UT-wise, the number of villages allotted for survey and the numbers actually surveyed, and the number of sample farmer households in which Schedule 33 was canvassed, along with number of sample persons. It may be noted that 93 sample villages situated in disturbed areas – 77 in Jammu and Kashmir and 16 in Assam –

Table A: Number of villages allotted and surveyed, and number of households and persons surveyed

State/UT	no. of villages allotted	no. of villages surveyed		no. of households surveyed		no. of persons surveyed

\*Read “panchayat wards” for “villages” in case of Kerala (see Appendix B).

could not be surveyed. Apart from this, 29 villages – 8 in Tamil Nadu, 2 in Arunachal Pradesh and 19 in the Andaman & Nicobar Islands – became casualty as they could not be surveyed within the deadline set for the Visit 1. In Visit 2, four more villages became casualty. The difference in the number of sample households (as well as the number of sample persons) surveyed in Visit 2 from that of Visit 1 was mainly due to non-availability of some households because of change or shift of residence.

## Chapter Two

### Concepts and Definitions

**2.0 Agricultural activity:** This is understood to mean cultivation of field and horticultural crops, growing of trees/plants such as rubber, cashew, coconut, pepper, coffee, tea, etc; animal husbandry, fishery, bee-keeping, vermiculture, sericulture, etc.

**2.1 Awareness of procurement agency:** To investigate ‘awareness’ of procurement agency, a farmer household was asked whether it knew the agency which it would contact for selling his produce (for main crop(s) like foodgrains, oilseeds, jute, cotton, etc.), if the market price fell below the Minimum Support Price. For this purpose the name of the following procurement agencies were kept in mind by the data collection personnel. Besides, state government agencies in different states responsible for procurement were also considered.

Crop	Procurement Agency
foodgrains (e.g. rice, wheat etc.)	Food Corporation of India (FCI)
jute	Jute Corporation of India (JCI)
cotton	Cotton Corporation of India (CCI)
pulses and oilseeds	National Agricultural Co-operative Marketing Federation of India Ltd. (NAFED)

**2.2 Awareness of World Trade Organisation (WTO):** A farmer was considered to be ‘aware’ of the World Trade Organisation i.e. if he or she had ever heard the name of WTO or had some idea about its functions.

**2.3 Bio-fertilisers:** Bio-fertilisers are not soil nutrients by themselves, but act as catalysts or direct agents in making the plant nutrients available to the soil. Bio-fertilisers carry some bacteria living on an organic base. They are sold in small bags and require storage at specified temperatures. Some examples of bio-fertilisers are Rhizobium, Azotobactor, Phosphate Solubalizing Bacterial (PSB) etc.

**2.4 Crop insurance:** Nowadays, there are provisions like *Rashtriya Krishi Bima Yojna* for insuring one’s crop to get protection from natural disaster, attack by pests, etc. In the survey, farmers were asked whether they had ever had their crops insured at any time.

**2.5 Crop season:** See **season**.

**2.6 Cultivation:** This means activities relating to production of crops by tillage and all related ancillary activities. However, growing of trees/plants/crops (such as rubber, cashew, coconut, pepper, coffee, tea, etc.) as plantation or orchards is not considered under ‘cultivation’. It comes under ‘other agricultural activity’.

**2.7 Farmer:** For the purpose of this survey, a farmer was defined as a person who operated some land (owned or taken on lease or otherwise possessed) and was engaged in agricultural activities on that land during the last 365 days.

2.7.1 If any one of the requirements of the above definition was not satisfied, the person was not treated as a farmer. Thus, persons engaged in agricultural and/or allied activities but not

operating a piece of land were kept outside the purview of the survey. So were agricultural labourers, coastal fishermen, rural artisans and persons providing agricultural services.

**2.8 Farmer household:** A household having a farmer as its member was regarded as a farmer household.

**2.9 Fertilisers:** Fertilizers and organic manures are not the same. Fertilizer usually means chemical fertilizer, which is manufactured in factories. Some examples of fertilizers are: urea, DAP, MOP, CAN, 15-15-15, 20-20-20 etc. The main content of fertilizers are nitrogen, phosphate and potash. The chemical fertilizers containing micro-nutrients like sulphur, zinc or calcium are also considered under the fertilizer category. On the other hand, organic manure or farmyard manure (FYM) is produced by the farmers in their fields using dung or other organic materials or agricultural wastes. In urban areas, this is also prepared using the sewage silt. This is bulky and is like decomposed organic matter. These organic manures are generally carried in trolleys.

**2.10 General educational level:** Only courses successfully completed are considered in ascertaining the educational level of a person. For instance, the educational level of a person who has studied up to first year B.A. is considered as 'higher secondary'. The educational level of a person who has studied up to 12th standard but has not appeared for the final examination or has failed is considered as 'secondary' (code 06). Persons who have attained proficiency in Oriental languages (e.g. Sanskrit, Persian, etc.) through formal but not the general type of education are classified appropriately at the equivalent level of general education standard.

**2.11 Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

**2.12 Household size:** The size of a household is the total number of persons in the household.

**2.13 Lease of land:** Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

2.13.1 Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions are not treated as 'lease' for the purpose of the survey.

**2.14 Literate:** A person who can both read and write a simple message with understanding in at least one language.

**2.15 Otherwise possessed land:** This is understood to mean all public/institutional land possessed by the household without title of ownership or occupancy right. The possession is without the consent of the owner. Private land (i.e., land owned by the household sector) possessed by the household without title of ownership and occupancy right is *not* included in this category. All private land encroached upon by the household will be treated as leased-in land.

**2.16 Ownership of land:** A plot of land is considered to be owned by the household if the right of permanent heritable possession, with or without the right to transfer the title, is vested in a member or members of the household. Land held in owner-like possession under long-term lease or assignment is also considered as land owned. Thus, in determining the ownership of a plot of land two basic concepts are involved, namely:

(a) Land owned by the household, i.e., land on which the household has the right of permanent heritable possession with or without the right to transfer the title, e.g., Pattadars, Bhumidars, Jenmos, Bhumiswamis, Rayat Sithibans, etc. A plot of land may be leased out to others by the owner without losing the right of permanent heritable possession.

(b) Land held under special conditions such that the holder does not possess the title of ownership but the right for long term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long term lease for 30 years or more) is considered as being held under owner-like possession. In the States where land reform legislations have provided for full proprietorship to erstwhile tenants, they are considered as having owner-like possession, even if they have not paid the full compensation.

2.16.1 Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant for which the right of ownership vests in the community. In both the cases, the tribal or other individual (tenant) is taken as owner as the holder has owner-like possession of the land in question.

**2.17 Primary source of energy:** Here primary source refers to the source from which energy is usually available, i.e. most often available during the total time spent on the activity.

**2.18 Principal source of income:** This has been used as a classificatory variable in some tables of the report. The various sources from which the household received any income during the last 365 days prior to the date of survey were grouped under (i) cultivation, (ii) farming other than cultivation, (iii) other agricultural activity<sup>1</sup>, and (iv) other sources. Other sources include wage/salaried employment, income from non-agricultural enterprises, pension, remittances, interest and dividends, but not begging, prostitution, etc., which were excluded. The group contributing the largest share of the household's income was taken to be its principal source of income.

**2.19 Season:** The crop seasons are generally identified by the months of harvesting of a crop during a normal year. For the purpose of the survey, Kharif season was taken to include both early Kharif (i.e. autumn) and late Kharif (i.e. winter). Similarly, the Rabi season included both Rabi and Zaid Rabi (i.e. summer). Generally, the harvesting months of the early Kharif and the late Kharif seasons extend over August to October and November to January, respectively. Again, the crops of Rabi and Zaid Rabi seasons are harvested during February to April and May to June, respectively. Thus, in general, the crops which are harvested during August to January

---

<sup>1</sup> This includes orchards and plantations (see paragraph 2.6).

were considered as crops of the Kharif season and those harvested during February to June were treated as crops of the Rabi season. However, there are departures from this general rule in case of some crops grown in certain regions. For example, rice in Tamil Nadu is harvested thrice and the three harvests are termed autumn, winter and summer crops. But the respective harvesting periods of the three crops are September to February, January to April and May to June. Though the periods of harvesting of first and second crops are spread over longer periods than those of the usual autumn and winter rice crops, the season for the autumn and winter paddy were taken as the Kharif season. Similarly, the autumn and the winter paddy in Karnataka, where these crops are harvested during September to December and November to March, were considered as Kharif crops. However, the crop seasons for the principal crops, given as part of the general guidelines issued for ascertaining the seasons of an agricultural operation in this survey, are listed below:

sl. no.	crop	season	sl. no.	crop	season
1.	Rice	Kharif, Rabi (summer)	9.	Sugarcane	Kharif
2.	Wheat	Rabi	10.	Sesamum	Kharif, Rabi
3.	Jowar	Kharif, Rabi	11.	Groundnut	Kharif
4.	Bajra	Kharif	12.	Linseed	Rabi
5.	Maize	Kharif	13.	Castor	Kharif
6.	Ragi	Kharif	14.	Cotton	Kharif
7.	Barley	Rabi	15.	Tobacco	Kharif
8.	Gram	Rabi	16.	Jute	Kharif

2.19.1 Since most of the principal crops are grown in only one season, there is little difficulty in ascertaining the crop season of a particular agricultural operation. Nevertheless, emphasis was laid on the need to exercise caution while determining the crop season of the crops grown in both Kharif and Rabi. In general, the crop season of such a crop should be determined on the basis of its months of harvesting. However, it has to be ensured that all the crops, whether principal or not, grown during the agricultural year 2002-03 are duly considered in either Kharif or Rabi season.

2.19.2 For land without crop, July to December 2002 was treated as Kharif season and January to June 2003 as Rabi season.

**2.20 Self-help group:** A Self-help Group (SHG) is a voluntary gathering of people who share a common problem, condition or history. By coming together, members share support and ideas on how to cope and live a more productive and fulfilling life. Membership is usually free, on-going and open to new members. These groups are formed at local level mostly by under-privileged persons with the intention of developing financial stability and money management capacity through internal loaning of their own savings. SHGs also play an important role in health care system. In case an SHG is registered as co-operative society, then it is treated as a cooperative society and not an SHG. Only SHGs involved in agricultural activities were considered in this survey.

**2.21 Source of seeds:** If the seed is normally used from the earlier produce of the household it was considered as ‘farm-saved’. If the seed was procured in lieu of the crop produced by the household then the source was taken to be ‘exchange’. However, the case of a household procuring potato seed (say) in exchange of paddy was not treated as ‘exchange’ but as ‘purchase’. Free collection from others was also considered under ‘purchase’.

## Chapter Three

### Summary of Findings

3.0.0 The findings of the survey are presented in five parts:

1. Knowledge, preferences and behaviour
2. Resource availability and use
3. Land use
4. Irrigation
5. Energy use in farming

3.0.1 The survey covered all States and Union Territories of India. State-level estimates for some important characteristics are, however, presented in this chapter only for the 18 (out of 29) States with the highest figures of rural population (and accounting for 96.8% of the country's population) according to the 2001 Census. In the detailed tables of Appendix A, estimates are given separately for all States except Delhi and Goa, and for the "Group of Union Territories" as a whole.

3.0.2 The percentages of rural households engaged in farming activity in different States as estimated from the survey data are shown below. The all-India percentage was 60. Coastal States such as Kerala (44%), Tamil Nadu (35%) and Andhra Pradesh (42%) had considerably lower percentages of farmer households than the all-India average. In Rajasthan, Uttar Pradesh, Jharkhand and Chhattisgarh, on the other hand, the proportion of farmer households was 76-77%. In Jammu & Kashmir, the percentage was highest (91%).

State	% of farmer hhs	State	% of farmer hhs
Andhra Pradesh	42	Madhya Pradesh	67
Assam	60	Maharashtra	56
Bihar	61	Orissa	64
Chhattisgarh	76	Punjab	62
Gujarat	60	Rajasthan	76
Haryana	62	Tamil Nadu	35
Jammu& Kashmir	91	Uttar Pradesh	77
Jharkhand	77	West Bengal	57
Karnataka	58		
Kerala	44	<b>All-India</b>	<b>60</b>

### 3.1 Knowledge, preferences and behaviour

3.1.0 Eight aspects of farming are studied in this section. They are:

- Educational level of farmers
- Awareness of important technical and institutional developments in agriculture
- Farmers' liking for farming
- Farmers' membership of registered farmers' organisations and self-help groups

- Crop insurance
- Services obtained from farmers' cooperatives
- Usual source of seeds
- Practice of seed replacement

Most questions put to households encounter some degree of non-response. In the detailed tables appearing in Appendix A, the proportion of non-responding households for each question is normally shown in a separate column. Percentages and proportions appearing in the discussion in this chapter have been re-worked from the detailed tables in Appendix A so that they represent proportions of households *responding* to the question, rather than proportions of all households.

### 3.1.1 Educational level

3.1.1.1 The per 1000 break-up of persons aged 7 or more who were engaged in farming in 2003 by ten levels of education is shown below for all-India. The break-up for all persons aged 7 or more in farmer households (households in which at least one person was engaged in farming) is also shown. For comparison, the break-up for the general rural population, as estimated from another NSS survey<sup>1</sup> carried out concurrently, is reproduced alongside.

sex	category	per 1000 number of persons (7+) with level of general education				
		not literate	literate without formal schooling	literate but below primary	primary	middle
	farmers	351	17	101	157	188
M	all members of farmer hhs	280	15	174	184	181
	rural population	289	15	172	185	175
	farmers	692	9	64	102	85
F	all members of farmer hhs	525	12	143	140	109
	rural population	518	13	137	143	111

sex	category	per 1000 number of persons (7+) with level of general education				
		secondary	higher secondary	diploma/certificate course	graduate	post-graduate and above
	farmers	100	48	4	26	7
M	all members of farmer hhs	89	44	5	22	6
	rural population	88	39	6	22	5
	farmers	32	11	1	3	0
F	all members of farmer hhs	44	18	1	7	1
	rural population	45	19	2	8	2

<sup>1</sup> See NSS Report No.490: Household Consumer Expenditure and Employment-Unemployment Situation in India, 2003.

3.1.1.2 The separate estimates for “farmers” and “all members” were made possible by asking each person in the surveyed farmer households whether he or she had been engaged in farming during the last 365 days.

3.1.1.3 It is seen that the break-up of persons by educational level of all members of farmer households matches that of the entire rural population very closely, both for males and for females. The break-ups for “farmers” – male and female – differ from the overall population break-ups. The rate of illiteracy among the farmers appears to be high. Still, it may be observed that the proportions of farmers, particularly the males, at different levels of education, were close to those for the general population.

3.1.1.4 The literacy situation in the major States is shown below. Details of inter-State variation in level of general education of farmers are available in Table 8 of Appendix A.

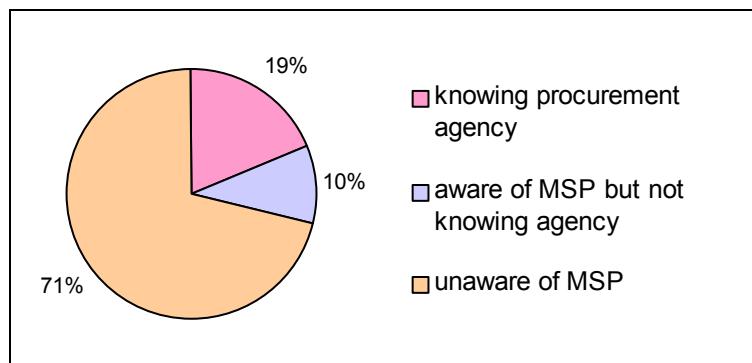

State	percentage of literates (7+)			
	farmers		all members	
	M	F	M	F
Andhra Pradesh	48	21	59	38
Assam	85	71	88	74
Bihar	62	16	68	39
Chhattisgarh	65	29	73	44
Gujarat	73	38	78	49
Haryana	74	31	79	52
Jammu & Kashmir	58	31	69	47
Jharkhand	60	18	68	34

<b>All-India</b>	<b>65</b>	<b>31</b>	<b>72</b>	<b>47</b>

### 3.1.2 Awareness of technical and institutional developments in agriculture

**3.1.2.1 Bio-fertilisers:** Asked whether they were aware of bio-fertilisers, an estimated 18% of farmer households said they were. Among the major States, awareness was markedly high in Kerala (55%) and Tamil Nadu (48%) (see table below for major States and Table 1 of Appendix A for the other States/ UTs).

**3.1.2.2 Minimum support price (MSP):** Of the farmers 19% not only understood the idea of minimum support price but also knew the agency (if not its name, its location) to which they could sell their crop if its market price fell below the minimum support price. Again, 10% of farmers were aware of the concept of minimum support price but not of the procurement agency. The remaining 71% did not know or understand the concept of MSP.

Figure 1: Knowledge of minimum support price

Figures are percentages of farmer households.

**3.1.2.3 WTO:** Only 8% of farmers at the all-India level had heard of the World Trade Organisation and had some idea of its objectives and activities. Among the major States, awareness was by far the highest in Kerala (44%), followed by Punjab (23%).

State	percentage of farmer households aware of			State	percentage of farmer households aware of		
	bio-fertilisers	MSP	WTO		bio-fertilisers	MSP	WTO
Andhra Pr.	11	29	6	Kerala	55	61	44
Assam	26	22	11	Madhya Pr.	10	29	3
Bihar	13	19	8	Maharashtra	24	28	6
Chhattisgarh	11	35	1	Orissa	15	12	2
Gujarat	11	25	6	Punjab	7	63	23
Haryana	9	62	12	Rajasthan	10	11	2
Jammu & Kashmir	28	27	7	Tamil Nadu	48	48	12
Jharkhand	23	12	11	Uttar Pradesh	15	33	5
Karnataka	22	29	7	West Bengal	22	30	12
				All-India	18	29	8

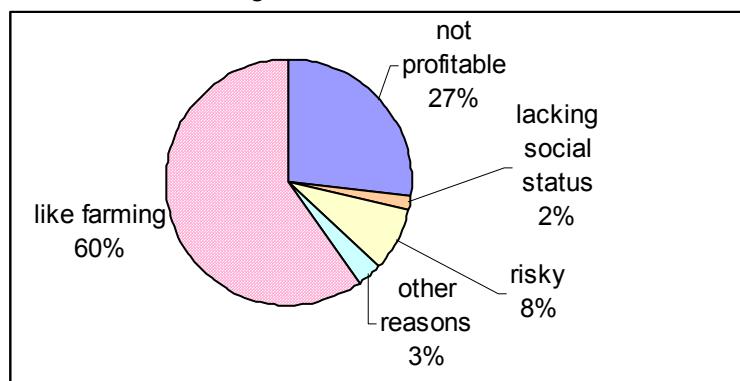

3.1.2.4 Table 1 of Appendix A gives details for all States and UTs.

### 3.1.3 Do farmers like farming?

3.1.3.1 At the all-India level, 60% of farmer households reported that they liked farming as a profession. The remaining 40% were of the opinion that, given a choice, they would take up some other career.

3.1.3.2 Those who did not like farming were asked the reason for their disaffection. At the all-India level, the 40% who disliked farming included 27% who did not find it profitable and 8% who thought it was too risky. Only 2% of all farmers disliked farming because of its lack of social status.

Figure 2: Percentage of farmers liking and disliking farming

3.1.3.3 There was a striking uniformity among the major States in the proportion of farmers liking farming. It varied between 49% and 69% in all major States except Andhra Pradesh, where it was 76%. The proportion disliking farming because of its unprofitability lay between 17% and 30% in all these States except Bihar and West Bengal, where it was 36%.

State	percentage of farmer households			State	percentage of farmer households				
	liking farming	not liking farming			liking farming	not liking farming			
		because not profit-able	risky			of other reasons	because not profit-able	risky	of other reasons
Andhra Pradesh	76	17	5	2	Kerala	67	28	2	3
Assam	59	21	13	7	Madhya Pradesh	60	22	11	7
Bihar	49	36	11	4	Maharashtra	61	29	7	3
Chhattisgarh	54	24	17	5	Orissa	53	34	9	4
Gujarat	67	26	5	2	Punjab	62	28	2	8

Karnataka	57	28	11	4	West Bengal	54	36	5	5
					All-India	60	27	8	5

3.1.3.4 Full details are given in Table 7 of Appendix A.

### **3.1.4 Membership of registered farmers' organisations and membership of self-help groups**

3.1.4.1 Only 2.2% of farmer households in rural India had a person who was a member of a registered farmers' organisation. In 4.8% of farmer households, there was at least one person who was a member of a self-help group.

3.1.4.2 State/UT figures are presented in Table 6 of Appendix A. Membership of farmers' organisations was most prevalent in Kerala (11% farmer households), Assam (7%), Gujarat (6%) and Karnataka (5%). In all other States and UT's, the proportion was 4% or less.

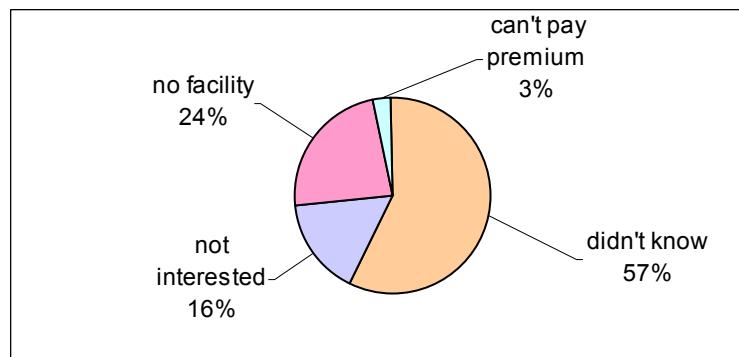

3.1.4.3 The three States where self-help groups were most common were Kerala (20%) of farmer households having a person who was a member), Andhra Pradesh (18%) and Tamil Nadu (13%). In all other States and UTs, the percentage was less than 10.

State	percentage of farmer households with at least one person belonging to		State	percentage of farmer households with at least one person belonging to	
	a registered farmers' organisation	a self-help group		a registered farmers' organisation	a self-help group
Andhra Pradesh	2.4	17.7	Kerala	10.5	19.9
Assam	7.0	8.2	Madhya Pradesh	0.8	2.7
Bihar	0.3	0.8	Maharashtra	2.2	4.9

Jharkhand	0.2	2.8	Uttar Pradesh	1.0	1.5
Karnataka	5.2	8.1	West Bengal	4.0	1.9
			All-India	2.2	4.8

### 3.1.5 Crop insurance

3.1.5.1 Farmers were asked whether they had ever had their crop insured at any time in the past and, if not, why not. Was it because they were not aware of crop insurance? If they were aware, was it that they were not interested? If they were interested, was it that the insurance facility was not available in their area? Or, was paying the insurance premium beyond their means?

Figure 3: Reason for never insuring crop

3.1.5.2 At the all-India level, only 4% of farmer households reported ever having insured their crops. Among those who had never insured their crops, a very large proportion – 57% - were found to be unaware of the practice of crop insurance. While 16% were found to be aware but not interested, 24% said that the facility was not available to them. Only 3% felt that they could not afford to pay the insurance premium. The State-level picture is shown in the table below for major States and in Table 2 of Appendix A for all States/UTs.

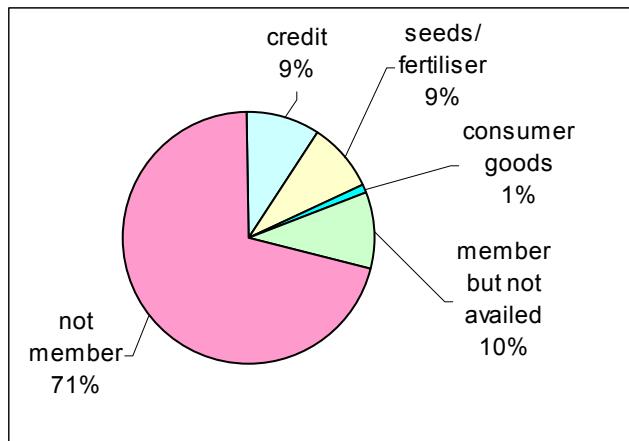

State	percentage of non-insuring farmer households not insuring because				State	percentage of non-insuring farmer households not insuring because			
	unaware	not interested	facility absent	can't pay premium		unaware	not interested	facility absent	can't pay premium
Andhra Pr.	75	10	12	3	Kerala	29	56	10	5
Assam	63	18	18	1	Madhya Pr.	61	24	10	5
Bihar	41	9	49	1	Maharashtra	63	25	7	5
Chhattisgarh	66	20	8	5	Orissa	76	8	9	7
Gujarat	47	30	16	7	Punjab	20	12	67	1
Haryana	41	14	42	3	Rajasthan	55	7	37	1
Jammu & Kashmir	25	3	72	1	Tamil Nadu	56	33	9	2
Jharkhand	68	7	24	1	Uttar Pradesh	56	13	29	2
Karnataka	54	25	13	8	West Bengal	64	12	23	1
					All-India	57	16	24	3

3.1.5.3 The States with 10% or more farmer households having ever insured their crops were: Gujarat (20%) and Maharashtra (11%) (See Table 2 of Appendix A). About 72% of the farmers of Jammu & Kashmir and 67% of the farmers of Punjab who had never insured their crops said the facility was not available. The same reason was given by 49% in Bihar, 42% in Haryana, 37% in Rajasthan and 29% in Uttar Pradesh.

### 3.1.6 Services of co-operatives

3.1.6.1 Data collected on the nature of services received by farmer households from cooperatives, with special reference to assistance in farming, are presented in Table 3 of Appendix A. Six kinds of services were of interest: credit, marketing services, services relating to seeds/fertiliser, agricultural implements, inputs and consumer goods. In case a household had received more than one kind of service, the most important service in value terms was considered.

Figure 4: Services received from cooperatives

3.1.6.2 At the all-India level it was found that 71% of households were not members of cooperatives at all. The remaining 29% included 10% who had not availed themselves of any of the six kinds of services, while a total of 19% had availed themselves of at least one. For 9% of households, the most important service (in terms of value) availed of was credit. For another 9%, it was seeds or fertilisers, while for 1%, it was consumer goods. Of the total sample of 51770 households, the numbers obtaining services relating to agricultural implements, marketing and farming inputs were (only) 118, 110 and 28 respectively. Some aspects of the picture at State level are highlighted below. The States with the highest proportions of households with members of cooperatives were Kerala (60%), Maharashtra (54%), Chhattisgarh (50%) and Gujarat (49%).

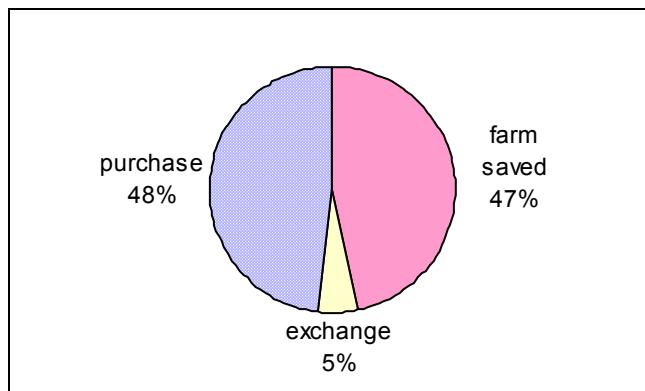

State	% of households		kind of service most commonly availed* (% of households)	State	% of households		kind of service most commonly availed* (% of households)
	not members of co-ops.	members but did not avail services			not members of co-ops.	members but did not avail services

\*Credit: CR; Seeds/Fertiliser: SF; Consumer goods: CON

### 3.1.7 Seeds: Usual source of procurement

3.1.7.1 As for their usual way of procuring seeds, 47% of farmers, at the all-India level, were estimated to depend on farm-saved seeds. About 48% usually purchased their seeds, and 5% acquired them through exchange, that is, in lieu of the crop produced by the household. Note that free collection from others was also considered under ‘purchase’.

Figure 5: Usual source of seeds

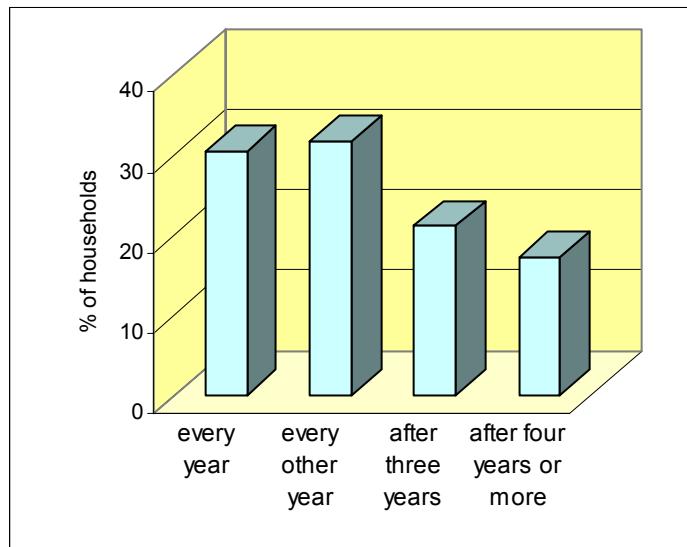

3.1.7.2 State/UT level details are given in Table 4 of Appendix A. The picture for the major States is shown in the table below. Purchase of seeds was most common in Andhra Pradesh (81% of farmer households), followed by Rajasthan (73%). Farm-saved seeds, on the other hand, were most used in Chhattisgarh (85%), Orissa (82%), Assam (77%), Jammu & Kashmir and Jharkhand (both 70%). Acquisition of seeds through “exchange” was most prevalent in Haryana (9%) and Madhya Pradesh (8%).

State	percentage of farmer households using seeds that were				State	percentage of farmer households using seeds that were			
	farm saved	got through exchange	purchased	total		farm saved	got through exchange	purchased	total
Andhra Pradesh	17	2	81	100	Kerala	65	3	32	100
Assam	77	4	19	100	Madhya Pradesh	50	8	42	100
Bihar	61	7	32	100	Maharashtra	29	2	69	100

					All-India	47	5	48	100

### 3.1.8 Seeds: How often farmers replace varieties

3.1.8.1 While 30% farmer households, at the all-India level, were found to be replacing their seed varieties every year, 32% were replacing seed varieties every alternate year. Again, 21% were replacing seed varieties after three years, and 17% were waiting four years or longer before replacement.

Figure 6: Usual practice of seed replacement

3.1.8.2 State-level information is given in Table 5 of Appendix A. The picture for the major States is shown below. In four of these States, more than 50% of farmers were replacing seed varieties every year: Andhra Pradesh (57%), Maharashtra (54%), and Karnataka and Rajasthan (51%). At the other extreme, Kerala had 74% of its farmers replacing their seed varieties after 4 years or more. Apart from Kerala, no other major State had more than 30% of its farmers waiting longer than three years to replace seed varieties.

State	percentage of farmer households replacing seeds				State	percentage of farmer households replacing seeds			
	every year	every alternate year	after three years	after 4 years or more		every year	every alternate year	after three years	after 4 years or more

## **3.2 Availability and use of fertilisers, organic manure, improved seeds, pesticides and veterinary services**

### **3.2.1 Distance from various resources**

3.2.1.1 How far were farmer households, generally, located from various resources needed for farming? Were the resources available within the village, or were they several kilometres away from the farmer? The all-India picture, during the kharif season, is shown in Figure 7.

3.2.1.2 For each of the five resources, “distance (category) from resource” was ascertained for all surveyed households and not merely from those reporting that they were using the resource concerned. In villages where resources could be delivered to a household at its doorstep by prior booking, the resource was considered to be available within the village.

**Figure 7: Percentage distributions of farmer households by distance from different resources (kharif season)**

3.2.1.3 The chart above relates to the kharif season. It shows that among the five resources, only organic manure was available within the village for the majority of farmers in India (about 68%). Fertilisers were available within the village for 27% of farmer households and veterinary services for about 24%. Pesticides were available within the village for 19% households and improved seeds for 18%. (See table on the next page.) Details at State and all-India level are available in Table 13 of Appendix A.

3.2.1.4 It may be observed that for each of the resources, the “< 2 km” category contains an appreciably smaller number of households than either “within village” or “2-5 km”. This probably means that for many villages, the nearest point where the resource was available was a larger village, which was in most cases more than 2 km away.

3.2.1.5 Almost 24% of farmers at the all-India level (see Table 13) had to travel more than 10 km for improved seeds and 21% of farmers had to travel more than 10 km for pesticides. The percentages were somewhat less for fertilisers and veterinary services but still as high as 13-15%.

3.2.1.6 In the above discussion and the table below, estimates based on reporting for the kharif season have been referred to. Figures for the rabi season are not much different. In

case of organic manure, however, as many as 75% farmer households reported that it was available within the village during the rabi season compared to only 68% for kharif.

State/UT	Availability of resources within one's own village during the kharif season				
	percentage of farmer households reporting availability in their own village of				
	fertiliser	organic manure	improved seeds	pesticides	veterinary services

### 3.2.2 Extent of use, adequacy, timeliness and quality

3.2.2.0 Table 14 of Appendix A gives proportions of farmer households using each of the five kinds of resources at State/UT and all-India level, separately for kharif and rabi, and also the proportions reporting that the resources were “available in time”. The proportions of user households are shown for the major States in the table on Page 19. Table 15 gives the proportions of user households who found the resources adequate for their purposes and the break-up of user households by their judgement of the quality of the resources – good, bad and satisfactory.

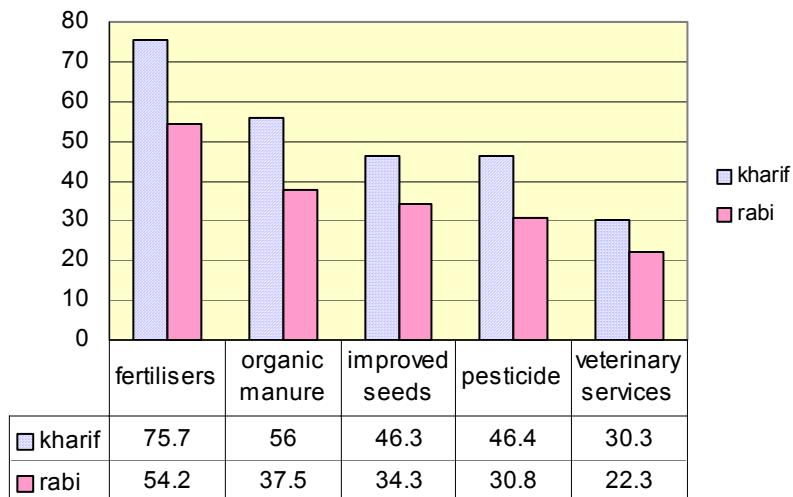

#### 3.2.2.1 Fertilisers

*Use:* At the all-India level, 76% farmer households reported using fertilisers during the last kharif season and 54% reported using fertilisers during the last rabi season. All such households, with the exception of about 2-3%, were able to use the fertiliser in time. Use of fertilisers was more common in kharif than in rabi for all major States except Bihar, Punjab, Haryana and Uttar Pradesh. In all major States more than 50% farmer households used fertilisers during kharif. During rabi, 30% or more households used them, except in Chhattisgarh (8%) and Orissa (15%).

*Adequacy:* During both kharif and rabi seasons, 97% of farmer households who used fertilisers considered the quantity adequate for their purposes. (See Figure 9.)

*Quality:* Asked about the quality of the fertilisers they had used, 65% of farmer households said it was good, 34% categorised it as “satisfactory”, and less than 1% considered it “poor”. Statewise details are given in Table 15 of Appendix A.

Figure 8: Percentages of farmer households using specific resources for farming

### 3.2.2.2 Organic manure

*Use:* Almost 56% farmer households at the all-India level reported using organic manure during the last kharif season and 38% reported using it during the last rabi season. All except 1-2% of such households said the manure was available in time. The proportion of users was between 50% and 75% in the kharif season for most major States but only 32-35% in Punjab, Haryana and Bihar. In Bihar and Uttar Pradesh, use of organic manure was more common during rabi than in kharif. Use during rabi was highest in Jammu & Kashmir ( 80% farmer households) followed by Kerala (68% farmer households) and lowest in Chhattisgarh (4%) and Orissa (10%).

*Adequacy:* During both kharif and rabi, about 91% of farmer households (Figure 9) who used organic manure considered it adequate for their purposes.

*Quality:* Only 1% of farmer households who used organic manure considered it to be of “poor” quality. 65% of those using it during kharif said the quality was good while the remaining pronounced it “satisfactory”. Among rabi season users, a higher proportion – 70% - found the quality “good”.

### 3.2.2.3 Improved seeds

*Use:* About 46% farmer households reported using improved seeds during the last kharif season compared to 34% for the last rabi season. All except 1-2% of such households were able to use the seeds in time. Use of improved seeds during kharif was lowest in Chhattisgarh (12% farmer households), Kerala (16%), Orissa (19%) and Jharkhand (22%). During rabi, the same four States reported the least use of improved seeds (Chhattisgarh,

1%; Jharkhand, 5%; Orissa, 10%; Kerala, 13%). In Bihar, Punjab, Haryana, Jammu & Kashmir and Uttar Pradesh, and possibly Assam, use of improved seeds was more common during rabi. In Maharashtra and Andhra Pradesh, more than two-thirds of farmer households had used improved seeds during the kharif season.

Use of different farming resources

State	percentage of farmer households using

Tamil Nadu	72	30	62	28	56	26	65	26	45	44
Uttar Pradesh	78	88	48	56	48	53	39	35	26	21
West Bengal	89	72	54	43	63	58	80	65	32	29
<b>All-India</b>	<b>76</b>	<b>54</b>	<b>56</b>	<b>38</b>	<b>46</b>	<b>34</b>	<b>46</b>	<b>31</b>	<b>30</b>	<b>22</b>

*Adequacy:* During both kharif and rabi seasons, 96% of farmer households who used improved seeds considered the available quantity to be adequate for their purposes.

*Quality:* Less than 1% of farmer households using improved seeds considered them to be of “poor” quality. About 61% of users during kharif and 64% during rabi said the seeds were “good” and the remaining pronounced them “satisfactory”.

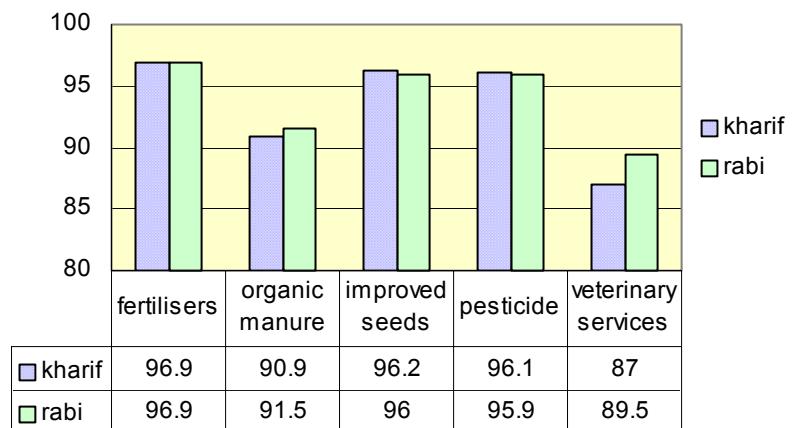

### 3.2.2.4 Pesticides

**Use:** The proportion of farmer households reporting use of pesticides in rural India during the last kharif season was 46% compared to 31% during the last rabi season. About 3 to 3.5% of such households said, however, that the pesticides were not available at the right time. The proportion of users during kharif was 18% in Rajasthan, 28% in Madhya Pradesh, and 36% or more in all other major States. During rabi, the lowest use of pesticides was in Chhattisgarh (5%) and Orissa (10%). In Haryana and Bihar, their use was appreciably higher during rabi. Use of pesticides was most prevalent in West Bengal (kharif, 80%; rabi, 65%).

**Adequacy:** During both kharif and rabi seasons, 96% of farmer households who used pesticides found the available quantity to be adequate for their purposes.

**Quality:** About 1.5% of user farmer households judged the quality of pesticides they had used as “poor”. While 60% felt that the quality was good, about 38% said it was satisfactory.

Figure 9: Percentage of user farmer households who considered resources adequate

### 3.2.2.5 Veterinary services

**Use:** Almost 30% farmer households at the all-India level reported using veterinary services during the last kharif season, compared to 22% during the rabi season. For the kharif season, however, as many as 14% of the user households reported that the services were not available in time, and for the rabi season, too, the proportion was 11%. Punjab had by far the highest proportion of farmer households reporting use of these services (66% during kharif and 71% during rabi), all other major States having less than 46%. Use of veterinary services was rarest in Jharkhand (kharif, 9%; rabi, 1%). In Chhattisgarh, only 2% farmer households had used such services in the rabi season.

**Adequacy:** Almost 87% of user households going by kharif season data and 90% by rabi season data considered the veterinary services available to be adequate.

**Quality:** Only 4-6% user households judged the veterinary services they had used as “poor”. About 56-59% thought they were “good” and 36-39% felt they were “satisfactory”.

### 3.2.3 Whether testing facilities for fertilisers and pesticides were available

3.2.3.1 *Fertilisers:* At the all-India level, only 2% of farmer households reported that facilities for testing of fertiliser were available to them and 1.5% said facilities were available during the rabi season. About 51% said that facilities were not available and 46-47% said they did not know whether they were available or not.

3.2.3.2 Apart from Punjab (9% for kharif, 5% for rabi) and Tamil Nadu (7% for kharif, 5% for rabi), the proportion of farmer households reporting that the facility was available was 3% or less in every major State.

State	facility for testing (during kharif season) of					
	fertilisers			pesticides		
	available	not available	don't know	available	not available	don't know
Andhra Pradesh	1.5	32	67	1.2	30	69
Assam	1.0	48	51	0.5	46	53
Bihar	1.3	59	40	1.0	51	48
Chhattisgarh	2.1	60	38	1.5	51	47
Gujarat	1.1	68	31	0.9	66	33
Haryana	0.5	31	69	0.6	29	70
Jammu & Kashmir	0.5	53	47	0.5	51	47
Jharkhand	1.1	64	35	0.3	67	33
Karnataka	3.3	53	44	3.1	51	46
Kerala	2.3	48	50	2.3	46	52
Madhya Pradesh	1.7	44	55	1.3	41	58
Maharashtra	1.6	52	47	1.2	51	48
Orissa	0.5	31	68	0.1	28	72
Punjab	9.1	30	61	8.2	29	63
Rajasthan	0.6	58	41	0.3	57	43
Tamil Nadu	6.9	45	48	5.4	46	49
Uttar Pradesh	2.3	59	39	1.7	55	43
West Bengal	1.4	52	46	1.3	50	49
<b>All-India</b>	<b>2.0</b>	<b>51</b>	<b>47</b>	<b>1.6</b>	<b>48</b>	<b>50</b>

3.2.3.3 The situation regarding testing facilities for testing of pesticides was very similar. About 1.5% reported that facilities were available, 47% said they were not, and 48% had no idea. Again the States with the highest percentages reporting availability were Punjab (8% for kharif, 5% for rabi) and Tamil Nadu (5% for kharif, 4% for rabi).

3.2.3.4 The figures for the kharif season are shown above for the major States.

### 3.3 Land used for different kinds of farming

#### 3.3.1 Differences in land use between owned and leased-in land:

3.3.1.1 As the table below shows, 96.2% of all land used for farming during kharif and 95.1% during rabi was devoted to cultivation, including horticulture, sericulture and vermiculture. The proportions were higher still for leased-in land (98.2% for kharif and 97% for rabi).

3.3.1.2 The share of “fishery” was much higher for leased-in land – 0.92% for kharif and 1.05% for rabi - than for owned land (0.14% and 0.20%).

activity	percentage of farmed land used for the activity out of					
	land owned and possessed		land leased in		all land possessed	
	kharif	rabi	kharif	rabi	kharif	rabi
cultivation & allied agriculture	96.06	94.90	98.23	97.04	96.22	95.05
orchards and plantations	3.27	4.20	0.76	1.23	3.09	3.98
dairy	0.37	0.54	0.07	0.66	0.35	0.55
farming of goat, sheep, etc.	0.05	0.07	0.00	0.00	0.05	0.06
piggery	0.00	0.01	0.00	0.00	0.00	0.01
poultry/ duckery	0.01	0.02	0.00	0.00	0.01	0.02
fishery	0.14	0.20	0.92	1.05	0.20	0.27
bee-keeping	0.00	0.00	0.00	0.00	0.00	0.00
other animal farming	0.08	0.07	0.00	0.00	0.07	0.06
total	100.00	100.00	100.00	100.00	100.00	100.00

3.3.1.3 The share of orchards and plantations was 3-4% for owned land compared to 1% or even less for leased-in land.

3.3.1.4 The share of “dairy” activity in total farmed land is seen to go up from 0.35% in the kharif season to 0.55% in the rabi season. This, presumably, is not because dairy activity intensified during the rabi months but because land which was cultivated during kharif but not during rabi was in many cases reported as “used for dairy” in the latter season only. If one considers leased-in land only, the increase in the share of “dairy” in the rabi season is much more marked.

3.3.1.5 Farming of goat, sheep, etc. had a share of 0.05-0.07% and was practically confined to owned land. Again, as in the case of dairy there is an increase in reporting of land as under this activity during the rabi season.

3.3.1.6 Details for all States and UTs are given in Table 9.

### **3.3.2 Cultivation and allied agriculture, orchards and plantations, dairy, fishery and other farming: State-level distribution of farmed land**

3.3.2.1 Inter-State variation in the proportions of farmed land devoted to cultivation and allied agriculture, orchards & plantations, dairy, fishery and other farming is shown in the table below:

State	percentage of farmed land used for			
	cultivation and allied agriculture		orchards and plantations	
	kharif	rabi	kharif	rabi
Andhra Pradesh	95.07	91.94	3.75	5.56
Assam	96.62	94.90	2.72	3.91
Bihar	97.09	97.41	2.28	1.93
Chhattisgarh	98.98	98.49	0.55	0.71
Gujarat	99.17	98.73	0.61	0.93
Haryana	99.00	98.86	0.28	0.36
Jammu & Kashmir	89.97	91.21	8.88	7.29
Jharkhand	99.10	99.06	0.42	0.57
Karnataka	92.46	84.99	7.43	13.65
Kerala	26.49	24.81	72.47	74.18
Madhya Pradesh	98.77	99.14	0.73	0.39
Maharashtra	98.30	97.36	1.41	2.33
Orissa	99.14	98.59	0.72	0.98
Punjab	98.28	98.60	0.76	0.45
Rajasthan	98.82	98.28	0.34	0.59
Tamil Nadu	86.45	79.41	12.87	19.43
Uttar Pradesh	97.14	97.43	2.06	1.69
West Bengal	95.40	94.78	1.74	1.94
<b>All-India</b>	<b>96.22</b>	<b>95.05</b>	<b>3.09</b>	<b>3.98</b>

3.3.2.2 The share of orchards and plantations was 72-74% in Kerala, 13% and 19% in Tamil Nadu during kharif and rabi respectively, 9% and 7% in Jammu & Kashmir, 7% and 14% in Karnataka, 4-5% in Andhra Pradesh, about 2% in Bihar, Maharashtra, West Bengal and Uttar Pradesh, and less than 1% in all other major States.

3.3.2.3 Cultivation, orchards and plantations together accounted for over 98% of all farmed land in practically every major State.

3.3.2.4 The share of farmed area reported as under “dairy”, in some States such as Karnataka, rose markedly during the rabi season (see also paragraph 3.3.1.4). Among the States where the percentage reported under dairy was more or less the same during the two

seasons, the highest percentage was in Punjab (0.95%), followed by Kerala, Haryana, Jammu & Kashmir and Uttar Pradesh (all about 0.7%).

State	percentage of farmed land used for					
	dairy		fishery		other farming	
	kharif	rabi	kharif	rabi	kharif	rabi
Andhra Pradesh	0.24	0.45	0.84	1.86	0.10	0.19
Assam	0.12	0.21	0.41	0.74	0.13	0.24
Bihar	0.51	0.57	0.01	0.01	0.11	0.08
Chhattisgarh	0.01	0.09	0.33	0.68	0.13	0.03
Gujarat	0.21	0.32	0.00	0.00	0.01	0.02
Haryana	0.67	0.75	0.00	0.00	0.05	0.03
Jammu & Kashmir	0.68	1.02	0.00	0.00	0.47	0.48
Jharkhand	0.06	0.16	0.01	0.03	0.41	0.18
Karnataka	0.06	1.24	0.00	0.00	0.05	0.12
Kerala	0.72	0.72	0.07	0.02	0.25	0.27
Madhya Pradesh	0.35	0.28	0.04	0.03	0.11	0.16
Maharashtra	0.08	0.23	0.00	0.00	0.21	0.08
Orissa	0.04	0.11	0.05	0.23	0.05	0.09
Punjab	0.95	0.95	0.00	0.00	0.01	0.00
Rajasthan	0.55	0.80	0.00	0.00	0.29	0.33
Tamil Nadu	0.56	0.96	0.00	0.00	0.12	0.20
Uttar Pradesh	0.62	0.68	0.09	0.08	0.09	0.12
West Bengal	0.21	0.32	2.56	2.82	0.09	0.14
<b>All-India</b>	<b>0.35</b>	<b>0.55</b>	<b>0.20</b>	<b>0.27</b>	<b>0.14</b>	<b>0.15</b>

3.3.2.5 The share of farmed land under fishery was highest in West Bengal (between 2.5% and 3%), followed by Andhra Pradesh (nearly 2% reported during rabi season), and then Assam.

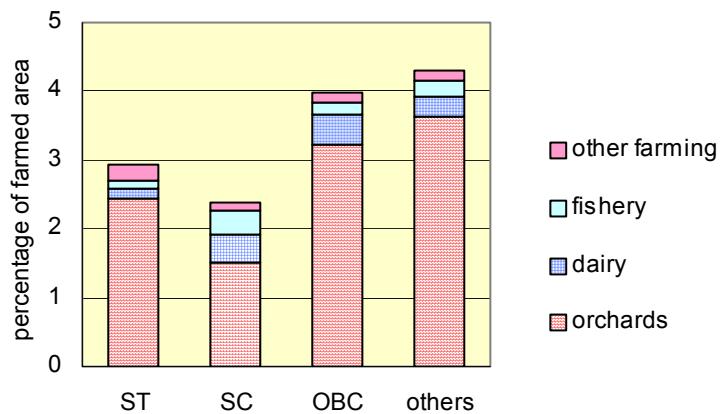

### 3.3.3 Differences among social groups in use of land for farming

3.3.3.1 *Cultivation vs. other farming:* There were some differences among social groups in the percentage of farmed area devoted to different agricultural activities (see Table 9-SG of Appendix A). The percentage break-ups of farmed area over the five broad groups “cultivation & allied agriculture”, “orchards”, “dairy”, “fishery” and “other farming” is shown overleaf for the four social groups: Scheduled Tribes (ST), Scheduled Castes (SC), Other Backward Classes (OBC), and Others. The share of cultivation during the rabi season is seen to be 97% for Scheduled Caste households, compared to under 95% for the other social groups.

social group	season	percentage of farmed area used for different agricultural activities					
		cultivation & allied agriculture	orchards	dairy	fishery	other farming	all
ST	kharif	97.06	2.43	0.17	0.10	0.23	100.00
	rabi	94.48	4.47	0.65	0.17	0.23	100.00
SC	kharif	97.62	1.50	0.42	0.34	0.11	100.00
	rabi	97.15	1.84	0.51	0.31	0.18	100.00
OBC	kharif	96.04	3.23	0.43	0.17	0.14	100.00
	rabi	94.48	4.01	0.60	0.25	0.16	100.00
others	kharif	95.71	3.62	0.30	0.25	0.13	100.00
	rabi	94.70	4.39	0.49	0.30	0.11	100.00
all	kharif	96.22	3.09	0.35	0.20	0.13	100.00
	rabi	95.05	3.98	0.55	0.27	0.15	100.00

3.3.3.2 *Farming other than cultivation:* To bring out the differences in the land use pattern more sharply, the percentages of farmed area devoted to orchards, dairy, fishery and other farming during the kharif season have been depicted in Figure 10.

Figure 10: Percentage of area farmed (kharif) for purposes other than cultivation: social groups

3.3.3.3 The share of fishery is seen to be the lowest for Scheduled Tribes and the share of orchards lowest for the Scheduled Castes (the latter's total share going to non-cultivation is itself lowest among all the social groups). The share of "other farming", which includes farming of goats, sheep, pigs, poultry, and all other animal farming except dairy, fishery, sericulture and vermiculture, is much higher for Scheduled Tribes than for the other social groups. Details of these are given in Table 9-SG of Appendix A.

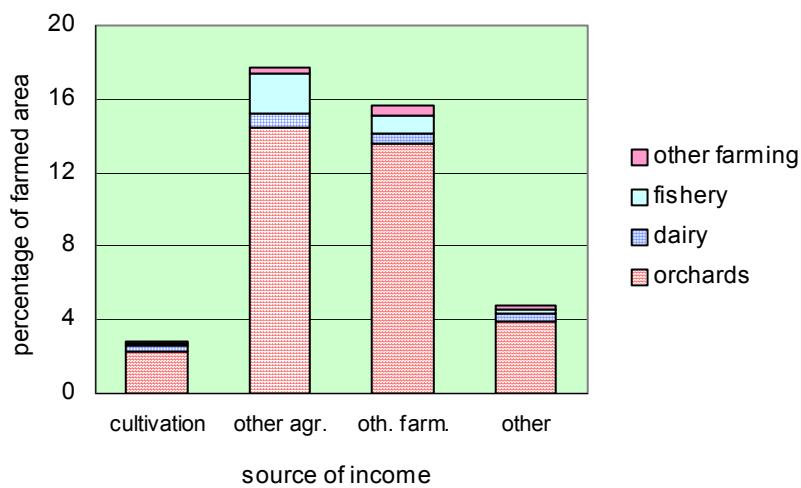

### 3.3.4 Differences in use of land for farming among farmer households with different sources of income

3.3.4.1 If farmer households are grouped by four major source of income: cultivation, farming other than cultivation, other agricultural activities and all other sources, then the differences in land use pattern of farmed land among these groups become, understandably, quite prominent. Thus the percentage of farmed area devoted to cultivation during the kharif season was 97% for the group with major source of income “cultivation” but only 82% for those with source of income “farming other than cultivation” (which includes animal farming), and 84% for those depending on “other agricultural activity” (which includes orchards and plantation crops).

source of income	percentage of farmed area used during kharif for different agricultural activities					all
	cultivation & allied agriculture	orchards	dairy	fishery	other farming	
cultivation	97.17	2.30	0.30	0.12	0.10	100.00
farming other than cultivation	82.28	14.49	0.75	2.13	0.34	100.00
other agricultural activity	84.41	13.58	0.58	0.94	0.50	100.00
other sources	95.17	3.89	0.48	0.20	0.24	100.00

3.3.4.2 Details for both kharif and rabi seasons are given in Table 9-SI of Appendix A.

Figure 11: Percentage of area farmed (kharif) for purposes other than cultivation: farmer households with different sources of income

3.3.4.3 To bring out the differences in the land use pattern more sharply, the percentages of farmed area devoted to orchards, dairy, fishery and other farming during the kharif season have been depicted in Figure 11 above.

### 3.3.5 Differences in use of land for farming among farmer households possessing different sizes of land

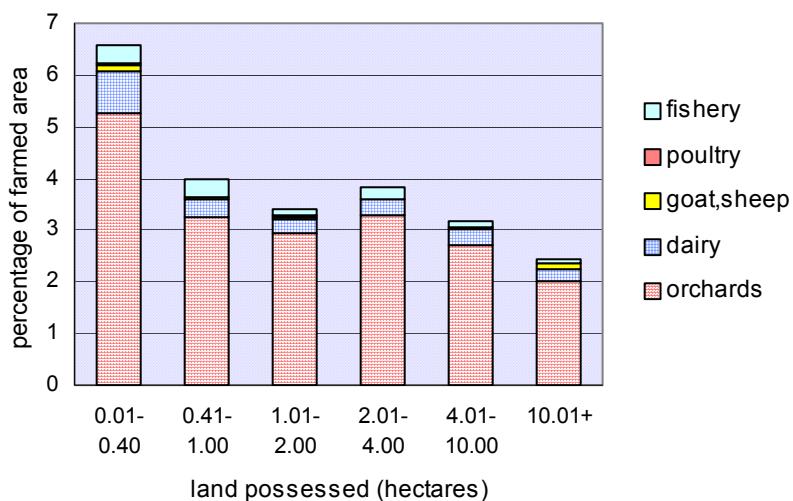

3.3.5.1 Table 10 of Appendix A gives the percentage distribution of farmed land over different kinds of agricultural activity, separately for farmer households in different size classes of land possessed in each State/UT. The all-India position is discussed here.

3.3.5.2 The size class “< 0.01 hectare”, which normally means “homestead land only”, shows a marked divergence from the general land use pattern. 68-69% of farmed land was devoted to dairy farming by this class while only 14% was cultivated during kharif and only 7% during rabi. All other size classes reported cultivation of 93% or more of farmed area during kharif and 91% or more during rabi. Figures for kharif for the lowest two size classes and “all classes” are shown below for illustration.

size of land pos- sessed (selected classes)	percentage of farmed area used during kharif for different agricultural activities							
	cultiva- tion & allied agr.	orchards	dairy	sheep, goats	poultry	fishery	other farming	all
<0.01 ha	14.26	1.73	68.81	9.98	2.37	0.03	2.82	100.00
0.01-0.40 ha	93.31	5.26	0.82	0.10	0.06	0.35	0.10	100.00
all classes	96.22	3.09	0.35	0.05	0.01	0.20	0.08	100.00

3.3.5.3 *Land use for farming other than cultivation:* For all classes except “< 0.01 ha”, the percentages of farmed land put to the important uses other than cultivation during the kharif season are shown in Figure 12. “Cultivation” has been left out of the chart so that the differences in the shares of the other uses may be viewed more clearly.

Figure 12: Percentage of area farmed (kharif) for purposes other than cultivation: farmer households in different size classes of land possessed

3.3.5.4 The shares of both “dairy” and “orchards” fall appreciably as one moves from the class “0.01-0.40 ha” to the next (higher) class. The share of “fishery” clearly declines with increase in land possessed.

## 3.4 Irrigation

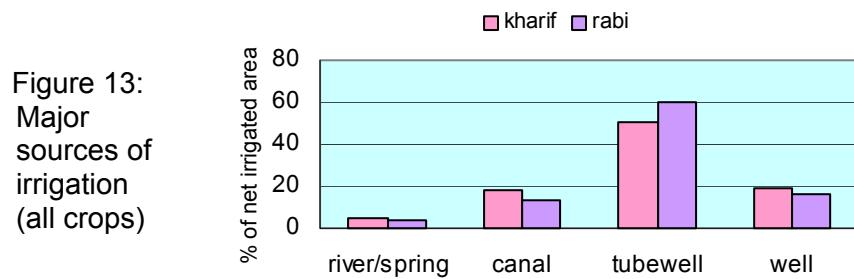

### 3.4.1 Area irrigated from different sources: all crops

State	season	percentage of cropped area irrigated by						cropped area (ha 00)	
		river/ spring	canal	tube- well	well	tank	other sources		
Andhra Pradesh	kharif	1.62	15.24	14.85	8.60	4.24	3.35	47.90	68490

	rabi	2.20	7.68	33.82	9.04	1.13	2.46	56.33	651563

3.4.1.1 The table above shows, for the major States and all-India, the percentage of cropped area irrigated by different sources: rivers/ springs, canals, tubewells, wells, tanks and other sources, during the kharif season, and during the rabi season. The “total” column shows the gross irrigated area as a percentage of cropped area. Since a particular plot of land may be irrigated more than once, the gross irrigated area may exceed total cropped area. Cropped area or net sown area was not recorded separately in the schedule of enquiry. Here it has been derived by adding areas of land reported to be under cultivation and allied

agriculture, and orchards and plantations. That is, all land mainly used for dairy and other animal farming, including fisheries, has been excluded as irrigation is not relevant to such uses. Punjab, Bihar, Uttar Pradesh and Haryana showed the highest levels of gross irrigated area as a percentage of cropped area, the levels being, for all four States, higher during the rabi season. The lowest irrigation levels were those of Assam and Orissa.

3.4.1.2 Table 11 of Appendix A shows area irrigated by each of the sources as a percentage of net irrigated area, separately for different crop groups. The percentages for the four most important sources are shown in the table below for the major States and all-India.

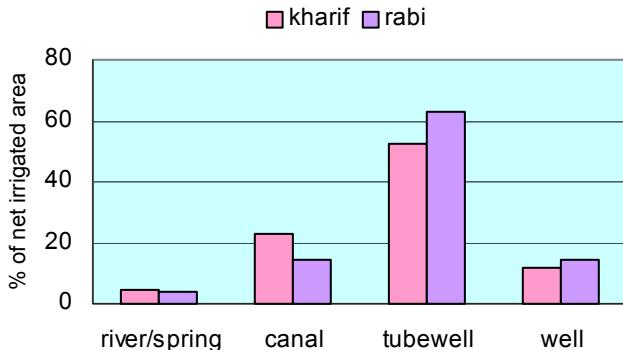

3.4.1.3 Of all irrigated lands, 50% during the kharif season and 60% during the rabi season were irrigated by tubewells. Wells were used to irrigate 19% of land irrigated during kharif and 16% during rabi. Canals were next (18%, kharif; 14%, rabi). Rivers and springs irrigated 4-5%.

### 3.4.2 Area irrigated from different sources: cereal crops

3.4.2.1 Table 11, Appendix A, gives the percentages of area irrigated by each of twelve crop groups, including cereals, pulses, oilseeds, mixed crop, sugarcane, vegetables, plantation crops, fodder, fruits and nuts, and fibre crops, as well as estimated irrigated area for each group. The results for the “cereals” group are briefly discussed below.

**Figure 14:**  
Major  
sources of  
irrigation:  
cereal  
crops

3.4.2.2 In general, the relative extent of use of the different sources of irrigation in case of cereals largely matched the pattern seen in case of “all crops” in practically every major State. The all-India percentage of area irrigated by tubewells is highest here as well: 53% in the kharif season and 63% in the rabi season. The all-India percentage irrigated by canals during the kharif season was noticeably higher for cereal crops (23%) than for all crops considered together (19%). Andhra Pradesh, Maharashtra, Uttar Pradesh and Karnataka contributed to this phenomenon, but not Punjab and Haryana, where the importance of canals was less for cereals than for other crops.

### 3.4.3 Net irrigated area under various crops

3.4.3.1 Table 11 of Appendix A also gives, for each of twelve crop groups, the total net irrigated area under these crop groups during kharif and rabi in each State and UT. Figure 15 shows the share of cereal crops in total net irrigated area for India as a whole (62% in kharif and 69% in rabi).

Figure 15: Net irrigated area under cereal and non-cereal crops

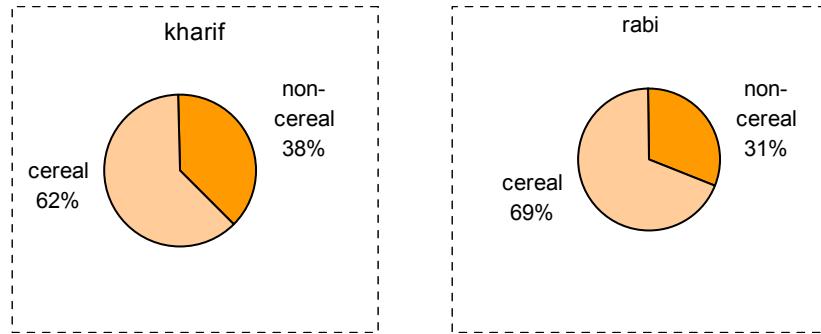

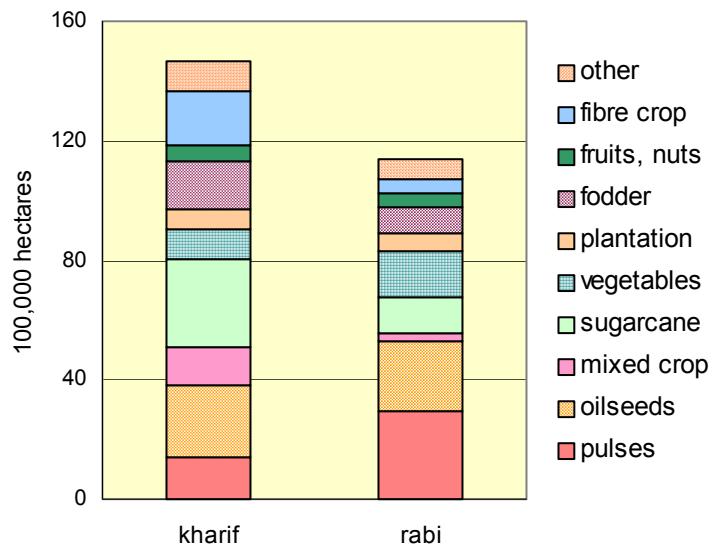

Figure 16: Net irrigated area under different crops other than cereals

3.4.3.2 The break-up of net irrigated area for non-cereal crops is shown in Figure 16. The non-cereal crop with the largest irrigated area during the kharif season was sugarcane (2.9 million ha), closely followed by oilseeds (2.4 million ha). In the rabi season, on the other hand, the “pulses” group showed the largest net irrigated area (2.9 million ha) after “cereals”, oilseeds again having 2.4 million hectares, while sugarcane had only 1.2 million hectares. (See Table 11 of Appendix A for details.)

### 3.4.4 Device used for irrigation

3.4.4.1 Farmer households who had irrigated their land during the last kharif or rabi season were also asked, for each source of irrigation they had used, which device among the following was used for irrigation: electric pump, diesel pump, Persian wheel, and other devices.

3.4.4.2 Table 12 of Appendix A shows, for each source of irrigation, what percentage of farmer households using the source had used electric pumps, what percentage had used diesel pumps, and so on. This is given separately for each State/UT. The last column of Table 12 indicates the number per 1000 of farming households using “no device” for irrigation. From this we can easily see that the percentage of farming households using some device for irrigation was as low as 3-5% at the all-India level for tanks, tubewells and wells, but around 80% for rivers/springs and 75-79% for canals.

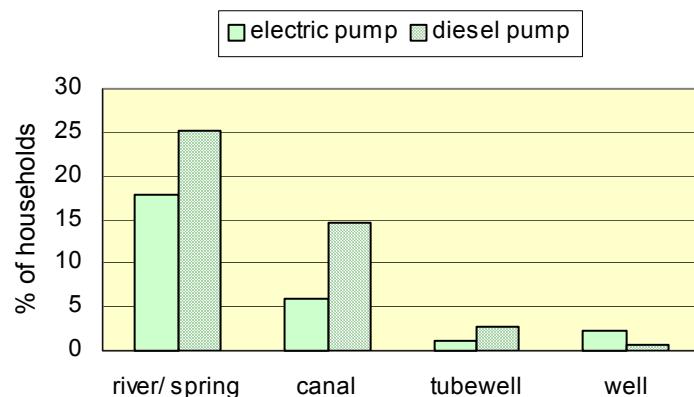

3.4.4.3 **Prevalence of use of different devices:** Among households irrigating their land from rivers or springs, 25% used diesel pumps during the kharif season and 31% used them during the rabi season. For irrigation from canals, 15% used diesel pumps during kharif and 18% during rabi. For irrigation from tube-wells, 3% relied on diesel pumps during kharif and 2% during rabi. For wells, less than 1% used diesel pumps in either season.

3.4.4.4 At the all-India level the proportion of farmer households using electric pumps for irrigation from rivers or springs was 18% during both kharif and rabi seasons. For irrigation from canals, 6-7% used electric pumps. Among those irrigating their land from wells, about 2% used electric pumps.

3.4.4.5 The proportion of households using Persian wheels for irrigation was less than 1 per 1000 nearly everywhere, whatever the source of irrigation used.

3.4.4.6 The all-India percentages using diesel pumps and irrigation pumps during kharif, for the four most important sources of irrigation, are shown in Figure 17.

Figure 17: Percentages of households using electric pumps and diesel pumps for irrigation (kharif season)

**3.4.4.7 Relative extent of use of different devices in terms of irrigated area:** Considering all sources of irrigation together, which was the device most widely used in terms of proportion of gross irrigated area (GIA)? Table 12A of the Appendix gives these proportions for different States and UTs, separately for kharif and rabi seasons. At the all-India level, the data are inconclusive on the point at issue, as “other devices” accounts for a larger proportion of GIA (10.9% for kharif and 8.5% for rabi) than any of the three explicitly recorded devices - diesel pumps, electric pumps and Persian wheels. The share of diesel pumps in GIA was 5.5% during the kharif season and 4.8% during the rabi season. Electric pumps accounted for 4.1% of GIA during the kharif season and 3.7% during the rabi season. The share of Persian wheels was 0.1% or less. At State level, too, the proportion of GIA accounted by any of the three devices specified in the survey schedule was rarely higher than 10%. Among the major States, Orissa had about 14% and 16% of GIA irrigated with the help of diesel pumps during the kharif and rabi season respectively. In Karnataka and Kerala, over 12% of GIA was irrigated with the help of electric pumps during the kharif season but the percentage fell to below 7% during the rabi season. In Maharashtra, 11% of GIA was irrigated with the help of electric pumps in both seasons.

### 3.5 Energy used for farming and other activities

3.5.0.1 Table 17 of Appendix A gives for each of eight different activities, the distribution of households reporting any of eight specific sources of energy used for the activity by type of energy used. The eight different sources of energy considered are: electricity, diesel/petrol/kerosene, solar energy, LPG, gobar gas, dung cake, firewood, animal power, and other sources. The activities are: ploughing, irrigation, harvesting, threshing, cane crushing, transport, cooking and lighting. For the first four of these activities (ploughing, irrigation, harvesting and threshing), Table 18 provides the per 1000 distribution of farming households by primary source of energy used, cross-classified by size of land possessed. Some important facts emerging from the data are discussed below.

3.5.0.2 It may be noted that for each activity, the “percentage of farmer households using a specific energy source” refers to the percentage of such households *among households reporting use of non-human energy* for the activity in question.

#### 3.5.1 Energy use: Ploughing

3.5.1.1 At the all-India level 47% of farmer households reporting energy used for ploughing work during the last 365 days used diesel tractors for ploughing, while 52% used animals. The proportions did not change much with increase in size of land possessed. In the topmost class - 10.00 hectares and above – however, there was a marked increase in the use of tractors, diesel use being reported by 70% households in this class. Further, about 1-2% households in this class reported use of electricity for ploughing.

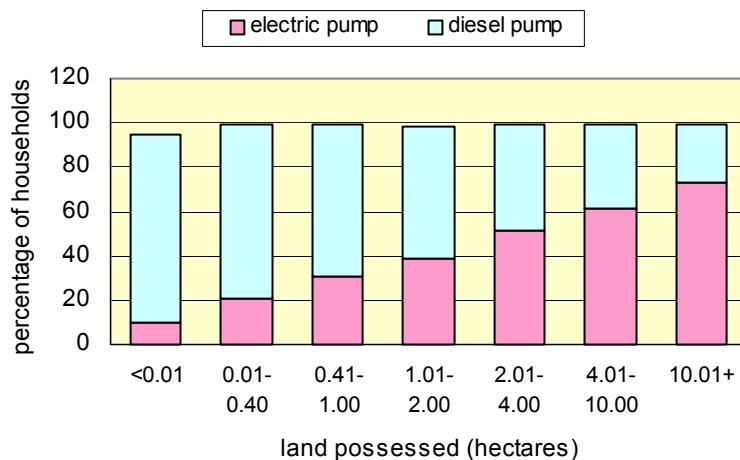

3.5.1.2 Inter-State variation in the proportions of households reporting use of diesel and animals for ploughing is shown below. The major States exhibited a great deal of variation, with not only the economically backward belt consisting of Orissa, Jharkhand and Chhattisgarh but also the more developed States of Karnataka and Maharashtra depending heavily on animal power.

State	percentage of farmer households ploughing land using		State	percentage of farmer households ploughing land using	
	diesel	animals		diesel	animals
Andhra Pradesh	38	61	Kerala	72	27
Assam	3	97	Madhya Pradesh	34	65
Bihar	64	35	Maharashtra	21	78
Chhattisgarh	10	90	Orissa	12	88
Gujarat	52	47	Punjab	96	3
Haryana	89	11	Rajasthan	70	29
Jammu & Kashmir	37	62	Tamil Nadu	68	30
Jharkhand	2	98	Uttar Pradesh	81	18
Karnataka	14	85	West Bengal	53	47
			All-India	47	52

### 3.5.2 Energy use: Irrigation

3.5.2.1 About 66% of farmer households which reported use of energy for irrigation of their land during the last 365 days used diesel pumps. Another 33% used electric pumps. The incidence of use of electric pumps increased steadily with size class of land possessed, from 10% for the lowest size class to 62% and 73% for the top two size classes (see Figure 18). In the lowest class “< 0.01 hectares”, 5% of those reporting energy use for irrigation used animal power.

Figure 18: Percentages of farmer households using diesel and electric pumps for irrigation among those using non-human energy

3.5.2.2 Inter-State variation in the proportions of households using diesel pumps and electric pumps for irrigation is shown below for important States.

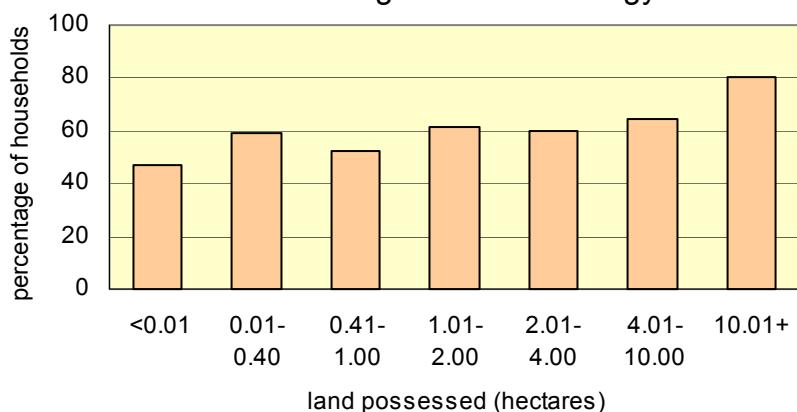

State	percentage of farmer households irrigating land using		State	percentage of farmer households irrigating land using	
	diesel pumps	electric pumps		diesel pumps	electric pumps
Andhra Pradesh	20	78	Kerala	15	85
Assam	87	4	Madhya Pradesh	34	65
Bihar	97	2	Maharashtra	12	87
Chhattisgarh	28	63	Orissa	61	38
Gujarat	35	63	Punjab	29	71
Haryana	53	47	Rajasthan	61	34
Jammu & Kashmir	22	75	Tamil Nadu	27	72
Jharkhand	81	2	Uttar Pradesh	84	16
Karnataka	7	89	West Bengal	87	13
			All-India	66	33

More details are available in Tables 17 and 18 of Appendix A.

### 3.5.3 Energy use: Harvesting

3.5.3.1 Almost 59% of households reporting use of energy for harvesting crops during the last 365 days used diesel-powered machines and 38% used animal power. The incidence of use of diesel power increased with size class of land possessed from 47% in the lowest size class to 65% in the class 4-10 hectares, and finally to 80% in the class “10.01+”. No such pattern was, however, seen in case of electrical energy, which about 3% of all those using energy for harvesting reported. Even in the highest size class “10 hectares & above”, about 17% of those using energy for harvesting used animal power.

**Figure 19: Percentage of households using diesel power for harvesting among those using non-human energy**

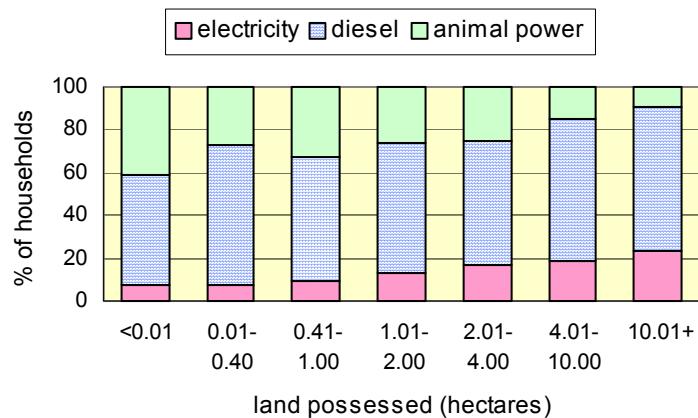

3.5.3.2 Inter-State variation in the proportion of households reporting use of diesel and animals respectively for harvesting is shown below.

State	percentage of farmer households harvesting crops using		State	percentage of farmer households harvesting crops using	
	diesel	animals		diesel	animals
Andhra Pradesh	60	40	Kerala	61	8
Assam	1	99	Madhya Pradesh	79	16

Jharkhand	0	100	Uttar Pradesh	87	8
Karnataka	27	72	West Bengal	23	74
<b>All-India</b>			<b>All-India</b>	<b>59</b>	<b>38</b>

### 3.5.4 Energy use: Threshing

3.5.4.1 Among households reporting use of energy for threshing of harvested crops during the last 365 days, about 12% at the all-India level used electric-powered threshers, 61% used diesel power and 27% used animal power. The incidence of use of electric power rose steadily with increase in size of land possessed, from under 8% in the lowest size class to 24% in the highest class. The use of diesel-powered threshers, too, increased with land possessed; from 51% for the class “<0.01” it reached 66-67% in the highest two size classes - “4-10 ha” and “10.01+”. The share of animal power fell from 41% in the lowest size class to 9% in the highest.

Figure 20: Percentages of households using electricity, diesel and animals among those using non-human energy for threshing

3.5.4.2 Inter-State variation in the relative importance of different sources of energy for threshing is shown in the table below.

State	percentage of farmer households in which threshing was done using			State	percentage of farmer households in which threshing was done using		
	electricity	diesel	animals		electricity	diesel	animals

## APPENDIX – B

### Sample Design and Estimation Procedure

**1. Geographical coverage:** The survey covered rural areas of the whole of the Indian Union except (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. Urban areas were wholly excluded from this survey.

**2. Period of survey:** The survey period of the 59th round was January to December, 2003.

**3. Sub-rounds:** The survey period was divided into two sub-rounds. Sub-round one consisted of the first half of the survey period of each visit while sub-round two consisted of the remaining period. Equal numbers of sample FSU's are allotted to each sub-round and an FSU is normally surveyed in the sub-round to which it is allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

**4. Visits:** There were four subjects of enquiry in the 59<sup>th</sup> round of NSS: Land and Livestock Holdings (Sch.18.1), Debt and Investment (Sch.18.2), Consumer Expenditure (Sch.1.0), and Situation Assessment Survey of Farmers (Sch.33). Only the situation assessment survey was restricted to rural India; the others covered both rural and urban areas of the country. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August and the other during September to December. Accordingly, each sample first stage unit (village or block) was visited twice by the investigator to whom it was allotted. A small proportion of households could not be surveyed a second time due to varying reasons; for these, only one set of data could be collected. Some items of information were in any case collected in the first visit only; these included general household characteristics, age, sex, educational level and other characteristics of household members, awareness of certain aspects of farming and access to modern technology etc. Canvassing of the listing schedule (Sch. 0.0) and selection of the sample households was carried out in the first visit only.

**5. Participation of States:** Situation Assessment Survey of Farmers was conducted in the Central sample for all the States/UTs. In the State sample, Andhra Pradesh, Chandigarh, Gujarat, Maharashtra, Meghalaya, Orissa and Tripura participated.

#### **6. Sample Design**

**6.1 Broad design:** A stratified multi-stage design was adopted for the 59<sup>th</sup> round survey. The first stage unit (FSUs) were the census villages in the rural sector (panchayat wards in Kerala). The ultimate stage units (USUs) were households. Hamlet-groups constituted the intermediate stage whenever these were formed in the selected village.

**6.2 Sampling frame for First Stage Units:** The list of villages (panchayat wards for Kerala) as per Population Census 1991 was used as sampling frame.

**6.3 Stratification (Rural Sector) :** Two *special strata* have been formed at the State/ UT level, viz.,

Stratum 1: all FSUs with population between 0 and 50 and

Stratum 2: FSUs with population more than 15,000.

Special stratum 1 was formed whenever at least 50 such FSUs were found in a State/UT. Similarly, special stratum 2 was formed if at least 4 such FSUs were found in a State/UT. Otherwise, such FSUs were merged with the general strata.

From FSUs other than those covered under special strata 1 and 2, *general strata* were formed and its numbering started from 3. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per population census 1991 or 2.5 million as per population census 2001, the district was split into two or more strata by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly included in an NSS region. In such cases, the part of the district falling in an NSS region constituted a separate stratum.

**6.4 Total sample size (FSUs) and allocation to States and UTs:** 10608 FSUs were allocated at all-India level on the basis of investigator strength to different States/UTs for Central sample. The total number of sample FSUs has then been allocated to the States and UTs in proportion to provisional population as per Census 2001 subject to the availability of investigators ensuring more or less uniform work-load.

**6.5 Allocation of State/UT Level Sample to Rural and Urban Sectors:** State/UT level sample size was allocated between the two sectors in proportion to provisional population as per *Census 2001* with 1.5 weightage to urban sector subject to the restriction that the urban sample size for bigger states like Maharashtra, Tamil Nadu etc. would not exceed the rural sample size. Thus, a total of 6784 villages were to be selected in the rural sector all over the country.

**6.6 Allocation to Strata:** Within each sector of a State/UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 FSUs was allocated to a stratum wherever possible.

**6.7 Selection of FSUs:** FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991 in all the strata for the rural sector except for stratum 1. In stratum 1 of the rural sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples.

## 7. Selection of Hamlet-groups and Households

**7.1 Formation of Hamlet-group:** Large villages having approximate *present population* 1200 or more are divided into a suitable number of hamlet-groups (hg's) as given below:

approximate present population of the sample village	no. of hamlet-groups (hg's) to be formed
less than 1200	1 (i.e.no hg formation)
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

For rural areas of Himachal Pradesh, Sikkim, Nagaland and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir, the number of hamlet-groups (hg's) formed was as follows.

approximate present population of the sample village	no. of hamlet-groups (hg's) to be formed
less than 600	1 (i.e.no hg formation)
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

Hamlet-groups were formed by more or less equalising population. Two hamlet-groups were selected from a large village by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups so formed.

**8. Formation of Second Stage Strata (SSS):** After listing of the households in a village or in each of the two selected hamlet-groups in the village, the households were divided into suitable number of second stage strata.

**8.1 Schedule 33: Situation Assessment Survey (SAS):** Four different second stage strata were formed. The demarcation of the second stage strata (SSS) was as follows:

For the purpose of stratification, only a particular set of rural households i.e. the set of **farmer households** were considered. By farmer household it is meant a household that possessed some land and was engaged in some farming activity during the last 365 days. Now SSS 1 was formed by all the farmer households possessing land less than 0.005 hectares. SSS 2, 3 and 4 were formed by the farmer households possessing land equal to 0.005 hectares or more. They were determined as under:

From the data of NSS 48<sup>th</sup> round, households having land area 0.005 hectares or more were considered. Two cut-off points, X and Y, were determined at State/UT level in such a way that 40% of these households possessed land area less than X, 40% possessed land area between X & Y and 20% possessed land area greater than Y.

Listed farmer households with land less than X formed SSS 2, those with land between X and Y constituted SSS 3 and those with land more than Y were in SSS 4.

Thus, the detailed constitution of the second stage strata for Schedule 33 was :

- SSS 1: households possessing land less than 0.005 ha and engaged in farming activity during the last 365 days
- SSS 2: households possessing land equal to or more than 0.005 ha but less than X and engaged in farming activity during the last 365 days
- SSS 3: households possessing land equal to or more than X but less than Y and engaged in farming activity during the last 365 days
- SSS 4: households possessing land equal to or more than Y and engaged in farming activity during the last 365 days

---

**Table 1: The values of cut-off points X & Y of land possessed (in hectares) for each State/UT**

State/UT (1)	X (2)	Y (3)
Andhra Pradesh	0.223	1.574
Arunachal Pradesh	1.255	2.024
Assam	0.405	1.214
Bihar	0.154	0.979
Chattisgarh	0.809	2.149
Goa	0.125	0.712
Gujarat	0.773	2.930
Haryana	0.494	2.469
Himachal Pradesh	0.389	1.214
Jammu & Kashmir	0.575	1.566
Jharkhand	0.405	1.307
Karnataka	0.805	2.432
Kerala	0.069	0.445
Madhya Pradesh	1.052	3.752
Maharashtra	0.817	3.246
Manipur	0.299	1.052
Meghalaya	0.538	1.348

Nagaland	0.688	1.214
Orissa	0.401	1.352
Punjab	0.024	2.141
Rajasthan	1.085	4.152
Sikkim	0.607	1.862
Tamil Nadu	0.032	0.830
Tripura	0.162	0.728
Uttar Pradesh	0.348	1.384
Uttaranchal	0.283	0.809
West Bengal	0.138	0.850
A & N Islands	0.073	2.024
Chandigarh	0.125	1.251
D & N Haveli	0.506	1.085
Daman & Diu	0.182	0.971
Delhi	0.016	0.417
Lakshadweep	0.081	0.182
Pondicherry	0.016	0.421

**9. Allocation and selection of sample households:** Two households were selected from each second-stage stratum, which means an allocation of 8 sample households to each sample FSU. In case of hamlet-group formation, one household was selected from each SSS of each hamlet-group.

Sample households were selected by SRSWOR in each SSS of each hamlet-group.

## 10. Estimation Procedure

### 10.1 Notations:

$s$  = subscript for stratum

$m$  = subscript for sub-sample ( $m = 1, 2$ )

$i$  = subscript for FSU [village (panchayat ward)]

$d$  = subscript for a hamlet-group ( $d = 1, 2$ )

$j$  = subscript for second stage stratum of an FSU/hg

$k$  = subscript for sample household under a particular second stage stratum within an FSU/ hg

$D$  = total number of hg's formed in the sample village (panchayat ward for Kerala)

$D^* = 1$  if  $D = 1$

=  $D / 2$  for FSUs with  $D > 1$

$N$  = total number of FSUs in rural stratum 1

$Z$  = total size of a rural stratum other than stratum 1 (= sum of sizes for all the FSUs of a rural stratum other than stratum 1)

$z$  = size of sample village used for selection.

$n$  = number of sample villages surveyed including zero cases but excluding casualties for a particular sub-sample and stratum.

$H$  = total number of households listed in a second-stage stratum of a hamlet-group of sample FSU

$h$  = number of households surveyed in a second-stage stratum of a hamlet-group of sample FSU

$x, y$  = observed value of characteristics  $x, y$  under estimation

$\hat{X}, \hat{Y}$  = estimate of population total  $X, Y$  for the characteristics  $x, y$

In terms of the above symbols,

$y_{smidjk}$  = observed value of the characteristic  $y$  for the  $k$ -th household in the  $j$ -th second stage stratum of the  $d$ -th hg( $d = 1, 2$ ) of the  $i$ -th FSU belonging to the  $m$ -th sub-sample for the  $s$ -th stratum;

However, for ease of understanding, a few symbols have been suppressed in the following paragraphs where they are obvious.

### 10.2 Formulae for estimation of aggregates for a particular sub-sample and stratum in rural sector (Schedule 33 was canvassed in rural sector only):

(a) Estimation formula for stratum 1:

(i) For households selected in  $j$ -th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i * \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

### 10.3 Overall estimate for aggregates:

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

### 10.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 10.5 Estimates of ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimate of the aggregates Y and X for two characteristics  $y$  and  $x$  respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

## 10.6 Estimates of error:

The variances of the above estimates are estimated as follows:

A) For aggregate  $\hat{Y}$ :

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$$

where  $V\hat{a}r(\hat{Y}_s)$  are as given below.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$V\hat{a}r_{ppswr}(\hat{Y}_s) = \sum_j V\hat{a}r(\hat{Y}_{sj})$$

$$\text{where } V\hat{a}r_{ppswr}(\hat{Y}_{sj}) = \frac{1}{n_{sj}(n_{sj} - 1)} \left[ \sum_{i=1}^{n_{sj}} \frac{Z_s^2 \hat{Y}_{sij}^2}{z_{si}^2} - n_{sj} \hat{Y}_{sj}^2 \right],$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1):

$$Var_{srswor}(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2 ,$$

where  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's'.

B) For ratio  $\hat{R}$ :

$$MSE(\hat{R}) = \frac{1}{(\hat{X})^2} \left[ \sum_s MSE_s(\hat{R}) + \sum_{s'} MSE_{s'}(\hat{R}) \right]$$

where  $s, s'$  indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$MSE_s(\hat{R}) = \frac{1}{n_s(n_s - 1)} \sum_{i=1}^{n_s} \left[ \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) - \frac{1}{n_s} \sum_{i=1}^{n_s} \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) \right]^2$$

where

$$\hat{Y}_{si} = \sum_j \hat{Y}_{sij} , \quad \hat{X}_{si} = \sum_j \hat{X}_{sij} ,$$

$$\hat{Y}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} y_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} y_{si2jk} \right],$$

$$\hat{X}_{sij} = D_{si}^* \left[ \frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} x_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} x_{si2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1):

$$MSE_{s'}(\hat{R}) = \frac{1}{4} \left[ (\hat{Y}_{s'1} - \hat{Y}_{s'2})^2 + \hat{R}^2 (\hat{X}_{s'1} - \hat{X}_{s'2})^2 - 2\hat{R}(\hat{Y}_{s'1} - \hat{Y}_{s'2})(\hat{X}_{s'1} - \hat{X}_{s'2}) \right]$$

C) Estimates of RSE:

$$RSE(\hat{Y}) = \frac{\sqrt{Var(\hat{Y})}}{\hat{Y}} \times 100$$

$$RSE(\hat{R}) = \frac{\sqrt{MSE(\hat{R})}}{\hat{R}} \times 100$$

## 11. Multipliers:

The formulae for multipliers for a sub-sample under Schedule 33 are given below:

stratum	formula for multipliers	
	hg 1	hg 2
rural stratum 1	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{N_s}{n_{sm}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4
all other rural strata	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4

Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing Schedule 0.0 irrespective of any misclassification observed between the listing schedule and the detailed enquiry schedule (i.e. Schedule 33).

## **12. Treatment for zero cases, casualty cases etc.:**

**12.1** While counting the number of FSUs surveyed ( $n_{sm}$ ) in a stratum, all the FSUs with survey codes 1 to 6 in Schedule 0.0 are considered. In addition, if no household is available in the frame then also that FSU is treated as surveyed. However, if the households of Schedule 33 are available in the frame of the FSU but none of these could be surveyed then that FSU has to be treated as casualty and it is not treated as surveyed.

**12.2** *Casualty cases:* FSUs with survey code 7 as per Schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for Schedule 33 and a particular *second stage stratum* as given in the following paragraph:

**12.2.1** FSUs with survey codes 1 and 4 as per Schedule 0.0 having number of households in the frame of j-th second stage stratum greater than 0 but number of households surveyed according to data file, considering both hg together, as nil (i.e.  $H_{i1j} + H_{i2j} > 0$  but  $h_{i1j} + h_{i2j} = 0$ ) will be taken as casualties for j-th second stage stratum.

*All the FSUs with survey codes 1 to 6 as per Schedule 0.0 minus the number of casualties as identified above are taken as the number of surveyed FSUs ( $n_{smj}$ ) for that stratum  $\times$  second stage stratum.*

When casualty for j-th second stage stratum occurs for a particular hg but not for the other hg, the FSU is not treated as casualty but some adjustments in the value of H for the other hg are done as follows:

(i) Suppose for hg 1,  $H_{i1j} > 0$  but  $h_{i1j} = 0$  while for hg 2,  $H_{i2j} > 0$  and  $h_{i2j} > 0$ . In that case  $D_i^* \times H_{i2j}$  is replaced by  $H_{i1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of segment 2.

(ii) Suppose for hg 1,  $H_{i1j} > 0$  and  $h_{i1j} > 0$  while for hg 2,  $H_{i2j} > 0$  but  $h_{i2j} = 0$ . In that case  $H_{i1j}$  is replaced by  $H_{i1j} + D_i^* \times H_{i2j}$  in the formula for multiplier of hg 1.

*It may be noted that  $n_{smj}$  is same for hg 1 & 2 of an FSU.*

## **13. Treatment in cases of void second-stage strata/ sub-strata/ strata/ NSS region at FSU or household level**

**13.1** A stratum may become void through all the FSUs belonging to the stratum being casualties. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum is replaced by the estimate as obtained from the other sub-sample for the same stratum.

**13.2** When a stratum is void in both the sub-samples, the following procedure is followed:

*Case(I): Stratum void cases at FSU level (i.e. all FSUs having survey code 7):*

- i) If a rural stratum, except stratum 1, is void then it is merged with a similar stratum within the same NSS region. However, if rural stratum 1 is void for any State/UT, it is not merged with other stratum.

- ii) If all the strata within an NSS region is void, it is excluded from the coverage of the survey. The state level estimates are based on the estimates of NSS regions for which estimates are available.

*Case (II): Stratum void case at second stage stratum level (i.e. all the FSUs are casualties for a particular second stage stratum):*

An FSU may be a casualty for a particular *second stage stratum* although the survey code is not 7. If all the FSUs of a stratum become casualties in this manner for a particular *second stage stratum*, the stratum will become void. The adjustment for this type of stratum void case is done according to the following guidelines.

The adjustment is made involving other strata (within NSS region) of the State/UT. Suppose A, B, C, and D are the four strata in the State/ UT/ region and stratum C is void for j-th *second stage stratum*. If  $\hat{Y}_{aj}$ ,  $\hat{Y}_{bj}$  and  $\hat{Y}_{dj}$  are the aggregate estimates for the strata A, B

and D respectively, then the estimate  $\hat{Y}_{cj}$  for stratum C is obtained as 
$$\left( \frac{\hat{Y}_{aj} + \hat{Y}_{bj} + \hat{Y}_{dj}}{Z_a + Z_b + Z_d} \times Z_c \right)$$
, where

$Z_a$ ,  $Z_b$ ,  $Z_c$  and  $Z_d$  are the sizes of strata A, B, C and D respectively.
